SUMMARY

In accordance with the *Local Government (Financial Management) Regulations 1996* the list of accounts paid in November 2022 are presented to Council.

BACKGROUND

This report presents accounts/invoices received for the supply of goods and services, salaries and wages, and the like which were paid during the period 01 to 30 November 2022.

COMMENT

The attached listing represents accounts/invoices the shire paid by cheque or electronic means during the period 01 to 30 November 2022.

CONSULTATION

Nil

STATUTORY OBLIGATIONS

Local Government (Financial Management) Regulations 1996, Regulations 12 and 13 apply and are as follows:

- 12. Payments from municipal fund or trust fund
- (1) A payment may only be made from the municipal fund or the trust fund
 - (a) if the local government has delegated to the CEO the exercise of its power to make payments from those funds by the CEO; or
 - (b) otherwise, if the payment is authorised in advance by a resolution of the council.

5

- (2) The council must not authorise a payment from those funds until a list prepared under regulation 13(2) containing details of the accounts to be paid has been presented to the council.
- 13. Lists of accounts
- (1) If the local government has delegated to the CEO the exercise of its power to make payments from the municipal fund or the trust fund, a list of accounts paid by the CEO is to be prepared each month showing for each account paid since the last such list was prepared
 - (a) the payee's name;
 - (b) the amount of the payment;
 - (c) the date of the payment; and
 - (d) sufficient information to identify the transaction.
- (2) A list of accounts for approval to be paid is to be prepared each month showing -
 - (a) for each account which requires council authorisation in that month
 - (i) the payee's name;
 - (ii) the amount of the payment; and
 - (iii) sufficient information to identify the transaction;
 - and
 - (b) the date of the meeting of the council to which the list is to be presented.
- (3) A list prepared under sub regulation (1) or (2) is to be
 - (a) presented to the council at the next ordinary meeting of the council after the list is prepared; and
 - (b) recorded in the minutes of that meeting.

POLICY IMPLICATIONS

Council's Authority to Make Payments Policy has application.

BUDGET/FINANCIAL IMPLICATIONS

Account payments accorded with a detailed 2022-23 Annual Budget.

10.2.2 30 November 2022 Statement of Financial Activity

Location:	Not applicable
Applicant:	Not applicable
File:	FM/10/003
Disclosure of Officer Interest:	None 02 December 2022
Authors:	Darren Long, Finance Consultant
Authorising Officer:	Dale Putland, Chief Executive Officer
Attachments:	Yes

SUMMARY

The Monthly Financial Report for 30 November 2022 is presented for Council's consideration.

BACKGROUND

The *Local Government Act 1995* and the *Local Government (Financial Management) Regulations 1996* require local governments to prepare monthly reports containing the information that is prescribed.

The Regulations require local governments to prepare annual budget estimates and month by month budget estimates so that comparatives can be made to Year to Date (YTD) Actual amounts of expenditure, revenue and income, and materials variances can be commented on.

COMMENT

The Shire prepares the monthly financial statements in the statutory format along with other supplementary financial reports consisting of:

- (a) Statement of Comprehensive Income by Program;
- (b) Statement of Comprehensive Income by Nature/Type;
- (c) Statement of Financial Activity by Nature;
- (d) Statement of Financial Activity by Program;
- (e) Summary of Net Current Asset Position;
- (f) Material Variances Report;
- (g) Statement of Financial Position;
- (h) Statement of Cash Flows;
- (i) Report on Progress of Capital Expenditure Program;
- (j) Report on Major Business Units;
- (k) Statement of Cash Back Reserves;
- (I) Loan Borrowings Report; and
- (m) Detailed Operating and Non-Operating Schedules.

At its budget meeting, Council adopted a material variance threshold of \$10,000 or 10%. For interpretation purposes, this means any variance at Function/Program level that is greater than 10% and exceeds \$10,000 in value is reported on and commentary is provided to explain the YTD budget estimate to YTD actual variance. The material variance is shown on the Statement of Financial Activity, in accordance with the *Local Government (Financial Management) Regulations 1996*.

The material variance commentary is now provided in a separate statement, called the Material Variances Report. This statement categorises the variance commentary according to reporting Nature/Type and groups the variances by Operating Revenue, Operating Expenditure, Investing and Financing Activities.

The Statement of Financial Activity as at 30 November 2022 shows a closing surplus of \$4,517,512.

The Closing surplus figures brought forward from 30 June 2022 are interim only, and are subject to change due to any audit adjustments.

CONSULTATION - Nil

STATUTORY OBLIGATIONS

Local Government Act 1995

Section 6.4–Specifies that a local government is to prepare such other financial reports as are prescribed.

Local Government (Financial Management) Regulations 1996: Regulation 34 states:

- (1) A local government is to prepare each month a statement of financial activity reporting on the sources and applications of funds, as set out in the annual budget under regulation 22(1)(d) for that month in the following detail:
- (a) annual budget estimates, taking into account any expenditure incurred for an additional purpose under section 6.8(1)(b) or (c);
 - (b) budget estimates to the end of month to which the statement relates;
 - (c) actual amounts of expenditure, revenue and income to the end of the month to which the statement relates;
 - (d) material variances between the comparable amounts referred to in paragraphs (b) and (c);
 - (e) the net current assets at the end of the month to which the statement relates.

Sub regulations 2, 3, 4, 5, and 6 prescribe further details of information to be included in the monthly statement of financial activity.

10.4 PLANNING

10.4.1 Scheme Amendment 23 – Lot 7876 Terry Road, Boyup Brook

Location:	Lot 7876 Terry Road
Applicant:	Edge Planning & Property
File:	A9370
Disclosure of Officer Interest:	None
Date:	8 December 2022
Author:	A. Nicoll, Town Planner
Authorising Officer:	Dale Putland, Chief Executive Officer
Attachments:	1. Scheme Amendment 23 – Advertised Document
	2. Schedule of Submissions
	3. Submissions
	4. EPA Referral
	2. Schedule of Submissions 3. Submissions 4. EPA Referral

SUMMARY

The purpose of this report is to put before Council the request to finally support the rezoning of Lot 7876 Terry Road from the 'Rural' zone to the 'Rural Small Holdings' zone.

The following map illustrates the Lot, subject to the scheme amendment proposal.

The site is located approximately 2 kilometres directly south of the Boyup Brook townsite, adjacent to the Blackwood River. The site is bounded by Terry Road to the south-west, the Blackwood River to the north and rural smallholding land to the east. The site has an area of 12.3417 hectares and is largely cleared with a small area of native vegetation in the south-east corner and along the northern boundary with the Blackwood River.

BACKGROUND

In accordance with the Shire's Local Planning Scheme No. 2, the site is currently zoned 'Rural' and is within the structure plan area number four (4), which recommends the use of the land for 'Rural Small Holdings'.

In August 2022, Council resolved to initiate the Scheme Amendment No.23, which seeks to make available the legitimate use of the land for rural small holdings (min 4ha lots).

Following Council resolution, the amendment was referred to the Environmental Protection Authority (EPA) where it was decided that the scheme amendment does not require assessment under Part IV Division 3 of the *Environmental Protection Act 1986* and that it is not necessary to provide any advice or recommendations.

Following the EPA decision, the scheme amendment was advertised and at the close of advertising, 7 submissions were received (not including EPA referral).

The submissions and a schedule summarising the submissions are attached to this report item for the Council to review. The schedule delivers information on:

- Authorities making a submission;
- A summary of comments made by each submission; and
- Recommendations.

The Council is recommended to consider the submissions and to agree that matters raised can be appropriately dealt with at the development stage of the process, in accordance with scheme provisions, which are in-place to ensure development is appropriate.

COMMENT

The purpose of the 'Rural Small Holdings' zone, is to accommodate rural living land parcels from 4 to 40 hectares in size.

The amendment proposes to facilitate future subdivision/development to create 3 lots which are a minimum lot size of 4 hectares, as indicated by the following figure:

Submissions were received from surrounding properties expressing support for the proposal.

Submissions were received from government agencies recommending compliance with regulatory standards, including the Government Sewerage Policy and the Planning for Bushfire Guidelines. The factors raised by the agencies can be addressed at the subdivision or development stages in the planning process, in accordance with state planning policy and procedural practices (i.e. requirement for effluent disposal systems to be formally assessed).

The physical attributes of the site (e.g. majority cleared), allow for rural small holding subdivision and development, without impacting on the existing amenity of the area.

It is recommended that the Council agree to finally support the scheme amendment. The proposal complies with the Shire's scheme, which recommends the area be used for rural smallholdings.

STATUTORY OBLIGATIONS

Regulation 50 of the Planning and Development Regulations 2015 states:

(1) In this regulation —

consideration period, in relation to a standard amendment to a local planning scheme, means the period ending on the latest of the following days -

- a) the day that is 60 days after the end of the submission period for the amendment;
- b) the day that is 21 days after the receipt of a statement in respect of the amendment delivered under section 48F(2)(a) of the EP Act;

- c) the day that is 21 days after the receipt of a statement in respect of the amendment delivered under section 48G(3) of the EP Act if that statement is in response to a request by the local government made under section 48G(1) of the EP Act before the later of the days set out in paragraphs (a) and (b);
- d) a day approved by the Commission.

Regulation 53 of the *Planning* and *Development Regulations 2015* states:

- (1) After passing a resolution under regulation 50(3) the local government must provide the advertised amendment to the local planning scheme to the Commission together with the following
 - a) a schedule of submissions made on the amendment;
 - b) the response of the local government in respect of the submissions;
 - c) particulars of each modification to the amendment proposed by the local government in response to the submission;
 - d) *a copy* of the resolution passed under regulation 50(3).

Section 35A of the Planning and Development (Local Planning Schemes) Regulations 2015 makes the following requirement:

35A. Amendment to local planning scheme affecting area to which structure plan relates

If an amendment to a local planning scheme affects the area to which a structure plan approved under the scheme relates, the amendment must include a statement that, when the amendment takes effect —

- (a) the approval of the structure plan is to be revoked; or
- (b) the structure plan is to be amended in accordance with the statement; or
- (c) the approval of the structure plan is not affected.

POLICY IMPLICATIONS

There are no policy implications directly relating to this item. A bushfire hazard level assessment was undertaken as part of a District Structure Plan endorsed for the area. The bushfire hazard level is mostly 'low' for nearly all of the site (see figure below). The lot and surrounding locality is predominantly cleared and has two-way public road access to two different destinations via Terry Road to the north and via Stanton Road to the south east.

CONSULTATION

The Amendment 23 was referred to the Environmental Protection Authority, advertised and reviewed in accordance with the *Planning and Development Regulations 2015*.

BUDGET/FINANCIAL IMPLICATIONS

There are no financial implications outside of the Shire's budget, relating to the proposal to amend the *Local Planning Scheme No.2*.

STRATEGIC IMPLICATIONS

There are no strategic implications directly relating to this item.

SUSTAINABILITY IMPLICATIONS

Environmental

The proposal to amend the zoning has been assessed by the Environmental Protection Authority (EPA). The EPA decided that the scheme amendment does not require assessment under Part IV Division 3 of the Environmental Protection Act 1986 and that it is not necessary to provide any advice or recommendations.

Economic and social

The vision is the creation of rural living lots on the fringe of the Boyup Brook townsite.

VOTING REQUIREMENTS

Simple majority.

SUMMARY CONCLUSION

It is recommended that the Council agree to adopt the Local Planning Scheme Amendment No. 23 for the following reasons:

- 1) The proposal is consistent with the current strategic direction set by the Shire's Local Planning Scheme No.2 (structure plan area recommending rural small holdings);
- 2) The site is physically suited to accommodating rural living and is located alongside land already zoned for 'Rural Small Holdings'.

COUNCIL DECISION & OFFICER RECOMMENDATION – ITEM 10.4.1MOVED: Cr Sarah E G AlexanderSECONDED: Cr Darren E King

THAT Council RESOLVE to:

- 1. Adopt Amendment No. 23 to amend Shire of Boyup Brook *Local Planning Scheme No. 2* by:
 - a) Rezoning Lot 7876 Terry Road, Boyup Brook from the 'Rural' zone to the 'Rural Small Holdings' zone.
 - b) Inserting 'and Lot 7876 Terry Road' into Schedule 3 Rural Small Holdings Zones after 'Road' for Rural Small Holdings Zone 2 (RSH2).
 - c) Amending the Scheme Map accordingly.
- 2. Determines Amendment No. 23 is a standard amendment under the provisions of the *Planning and Development (Local Planning Schemes) Regulations 2015* for the following reasons:
 - a) The amendment does not result in any significant environmental, social, economic or governance impacts on land in the scheme area.
 - b) The amendment is not a basic or complex amendment.
- **3.** Determines that, when the amendment takes effect, the approval of the structure plan, pertaining to the subject area, is not affected.

13 URGENT BUSINESS MATTERS

13.1 Funding Reallocation

Location:	Not applicable
Applicant:	Not applicable
Disclosure of Officer Interest:	None
Date:	7 December 2022
Author:	Lauren Carlin, Project Officer
Authorizing Officer:	Dale Putland, Chief Executive Officer
Attachments:	No

SUMMARY

Proposed reallocation of LRCI Phase 3 funding money within LRCI projects to facilitate delivery of approved projects.

BACKGROUND

The Phase 3 LRCI grant round commenced in July 2022, with the Shire receiving funding for renovation works to the Town and Lesser Hall, Sandakan Park playground, new accessible doors at the swimming pool and renovation works to community halls throughout the Shire.

The Shire has now firmed up cost estimates for the planned LRCI Phase 3 projects and it is now apparent that the Sandakan Park playground cannot be delivered within the current budget allocation.

Detailed costings for several other projects have identified shortfalls in the allocated project budgets and where additional funds can be used to achieve beneficial outcomes. Indications from Regional Development Australia are that Phase 4 of the LRCI funding will continue for the 2023/24 financial year.

It is proposed that the Sandakan Playground project is deferred to the Phase 4 LRCI funding round and that the funds allocated to this project is reallocated within the already approved LRCI projects.

COMMENT

The allocated budget for the Sandakan Park playground is currently \$100,000. Firms who were requested to quote on the project have advised that there will be significant cost savings if replacement of the play equipment and Softfall are together. Cost estimates for this indicate that the total cost will be approximately \$300,000. It is therefore proposed that the Sandakan Park playground is deferred to the Phase 4 LRCI project round.

It is anticipated that in addition to the Sandakan Park playground, installation of a toilet at the cemetery will be funded from the Phase 4 LRCI funding round. The Shire's Works Department are planning to install some kerbing at the cemetery to assist to control erosion in the short term and plan to progress works to improve the maintenance and appearance of the cemetery from the current maintenance budget over time.

The funds can then be allocated to other LRCI Phase 3 projects to assist in their delivery.

For example, the Phase 3 Town & Lesser Hall works are currently out for tender but initial feedback is that the work required will exceed the allocated \$665,000, the Tone Bridge Hall works have exceeded the budget due to increased costs for the asbestos removal, and the McAlinden Hall requires power and water.

Additionally, there have been savings of \$10,000 from the Swimming Pool project that can be reallocated into the other LRCI projects.

Council is therefore requested to reallocate \$100,000 from the Sandakan Park playground and \$10,000 from the Swimming Pool automatic doors to the following LRCI Phase 3 projects:

- \$18,000 reallocated to the Tonebridge Hall renovations.
- \$20,000 allocated to McAlinden Hall for works including reconnection of power, installation of a water tank and gutters to building. Note, this hall was not included in the original small hall allocation.
- The remainder of the funds to be reallocated into the Town Hall Precinct Project.

CONSULTATION

N/A

STATUTORY OBLIGATIONS

If Council approves the funding reallocation, the Shire will lodge an application with the funding body to approve an amendment to the Shire's funding agreement to reflect the above changes. As the projects have already been approved, Shire officers do not foresee any difficulties gaining this approval.

POLICY IMPLICATIONS

N/A

BUDGET/FINANCIAL IMPLICATIONS

The proposed reallocation of LRCI funds is within the existing LRCI budget.

Disclosure of Officer Interest:	None
Date:	16/12/2022
Author:	Maria Lane, Executive Assistant
Authorising Officer:	Dale Putland, Chief Executive Officer
Attachments:	Quotes Under Confidential Attachment

SUMMARY

The purpose of this report is for Council to select a suitably qualified recruitment consultant to facilitate the recruitment process of appointing a new Chief Executive Officer (CEO).

It is important that the Council commence the CEO recruitment process as soon as possible to allow for a smooth transition and timely appointment.

BACKGROUND

Current CEO, Mr Dale Putland, commenced with the Shire of Boyup Brook on 29 September 2020 and has elected to finish up on 24 February 2023. As such, the Council will need to begin the process of recruiting a new CEO.

COMMENT

The process of appointing a new CEO is governed by the Local Government Act 1995, specifically Part 5, Division 4 – Local Government Employees, Section 5.36, 5.39 and 5.40.

Due to the importance of the role and the need to ensure that the Shire is compliant in all facets of the process, it is recommended that Council utilize an external consultant with local government recruitment experience to assist the Council in this process.

CONSULTATION

Councillors were provided with a copy of each quote in electronic form for review and evaluation. **STATUTORY OBLIGATIONS**

Local Government Act 1995

Section 5.36 contains provisions for the employment of CEOs. Section 5.39 contains provisions for the contracts of CEOs. Section 5.40 requires that all employees are to be selected in accordance with the principles of merit and equity. Local Government (Administration) Regulations 1996
18A contains provisions for advertising requirements.
18B contains provisions for the contracts of CEOs.
18C contains provisions for the selection and appointment process for CEOs.
18E contains provisions for the qualifications of CEOs.
18F contains provisions for the remuneration and benefits as advertised.

POLICY IMPLICATIONS

Council Policy F.03 - Purchasing Policy

BUDGET/FINANCIAL IMPLICATIONS

Provision has not been made in the 2022/23 Adopted Budget for CEO recruitment costs and disbursements. The total costs of the CEO recruitment process including consultant's fees, advertising costs, disbursements and contract negotiation are expected to be between \$15,000 to \$20,000.

It is proposed to source these funds from GL 146106 Consultants. Any adjustments as a result of savings or re-prioritisation of other projects budget as part of this GL can be undertaken during the midyear 2022/23 Budget review process.

STRATEGIC IMPLICATIONS

1. CEO Position Description

SUMMARY

This Report is for Council to consider and endorse the Terms of Reference for the Chief Executive Officer (CEO) Selection Committee which has been established to lead Council in recruiting a new CEO following the resignation of the CEO (as per attachment 1 as was tabled at its Ordinary Council Meeting held 15 December 2022), and to consider and endorse the CEO Position Description (incorporating Selection Criteria) per attachment 2.

BACKGROUND

At the Ordinary Council Meeting held 15 December 2022, Council resolved to establish a CEO Selection Committee and appointed Councillors and independent members to the Committee, to commence the recruitment process for a new CEO.

The CEO Selection Committee acts in accordance with its Terms of Reference which sets out the membership, responsibilities, authority and operations of the Committee.

Councillors and Emily Bulloch from Beilby Downing Teal (the recruitment organisation) workshopped the CEO Position Description on 22 and 23 December 2022.

COMMENT

One of the fundamental roles of the Council is the employment of the local government's CEO. The CEO is responsible for implementing the council's strategic vision and leading the local government administration. A local government must select a CEO in accordance with the principles of merit, equity and transparency.

Under the *Local Government (Administration) Amendment Regulations, 2021*, the Guidelines for the Local Government CEO Recruitment and Selection were amended February 2021. Local Government Councils are now required to develop Terms of Reference relating to the management and implementation of the future CEO recruitment process and Council are required to endorse the CEO Position Description including selection criteria.

Local Government (Administration) Amendment Regulations 2021 – Schedule 2, Clause 5 (2): Determination of selection criteria and approval of job description form by Council; (a) the duties and responsibilities of the position; and

(b) the selection criteria for the position determined in accordance with subclause (1).

The Committee may close the meeting or part of the meeting to members of the public if the meeting deals with any of the matters listed in section 5.23(2)— (a) a matter affecting an employee or employees; and (b) the personal affairs of any person; and various other matters.

It is recommended that Council adopt the Terms of Reference for the CEO Selection Committee as per attachment 1 as was tabled at its Ordinary Council Meeting held 15 December 2022 and endorse the CEO Position Description (incorporating Selection Criteria) as per attachment 2.

CONSULTATION

Councillors were provided with a copy of the Terms of Reference and the Position Description in electronic and hard copy form for review and evaluation.

STATUTORY OBLIGATIONS

Local Government Act 1995

Local Government (Administration) Regulations 1996

Local Government (Administration) Amendment Regulations 2021 – Schedule 2, Clause 5 (Refer excerpt below);

- 5. Determination of selection criteria and approval of job description form
 - (1) The local government must determine the selection criteria for the position of CEO, based on the local government's consideration of the knowledge, experience, qualifications and skills necessary to effectively perform the duties and responsibilities of the position of CEO of the local government.
 - (2) The local government must, by resolution of an absolute majority of the council, approve a job description form for the position of CEO which sets out —
 - (a) the duties and responsibilities of the position; and
 - (b) the selection criteria for the position determined in accordance with subclause (1).

To whom it may concern,

Re Application for development approval

Please find below additional information to support a planning application for Jackson plantation at Diagram 73669, Volume 1802, Folio 557 on the Boweling McAlinden Rd.

Consistent with the planning application submitted for Armstrong plantation, please note:

- The applicant commits to operating in compliance with the Code of Practice for Timber Plantations in Western Australia, the council's firebreak order and FESA's Guidelines for Plantation Fire Protection;
- The applicant remains a member of the Plantation Managers Fire Cooperative Agreement (PMFA);
- Jackson plantation is in close proximity to FPCs McAlinden appliance, which the applicant has access to via the PMFA;
- A water tank and multiple dams exists within the plantation (refer to the plantation map);
- The applicant sees no evidence that replanting this site will negatively impact the amenity of the area;
- There are no existing building on the site;

Best regards,

at Ch

Lachlan Cook Manager, Plantation and Woodchip Projects

PLANTATION MANAGEMENT PLAN

MWO Jackson PROPERTY

P 2023

Prepared by

BUNBURY FIBRE EXPORTS

Last updated 17 October 2022
Bunbury Fibre Exports Plantation Management Plan

Introduction

Mitsui Bussan Woodchips Oceania Pty Ltd (MWO) owns a property in the district of McAlinden north of the town of Boyup Brook that has previously grown eucalypts (*E globulus* and *E smithii*) established under a joint venture with Nippon Paper Resources. These eucalypts have since been harvested and MWO is planning to re-establish 717.7 hectares with pine softwood (P radiata) and 16.1 hectares with native species. Approximately 90 hectares of the plantation is located within the Boyup Brook Shire, with the remainder located within the West Artur Shire (refer to the plantation map).

Establishment and maintenance of the pine plantation will be conducted by Bunbury Fibre Exports as MWO's appointed property management company.

Situated in the mainly the West Arthur Shire with a small area in the Boyup Brook Shire, the property is located approximately 30km north of Boyup Brook.

This document outlines the following in relation to this plantation -

- 1. Property summary
- 2. Land information
- 3. Plantation Establishment Plan
- 4. Plantation Tending Plan
- 5. Fire Management Plan
- 6. Timber Harvesting Plan
- 7. Carbon Capture Plan

All relevant maps and plans are attached.

- Contract Map
- Shire Approval Map
- References: Code of Practice for Timber Plantations in Western Australia
 - Guidelines for Plantation Fire Protection (1998)
 - Local Shire Council Firebreak Orders
 - Plantation Managers Fire Agreement 2020/2021

1 PROPERTY SUMMARY

Plantation Name:	Jackson
Landowner:	Mitsui Bussan Woodchip Oceania Pty Ltd
Planting Year:	2023
Area:	Approx 717.7 ha (<i>P radiata</i>)
Location Number:	Wellington Locations Title: Lot 7 D073667, Lot 2506 P133551, Lot 2567 P140501, Lot 128 P3019037, 2506, and 2567
Catchment:	Collie River
Avg Annual Rainfall:	688 mm (McAlinden Weather Station Ref. No: 9666)
Landscape Position:	Lower to upper slopes
Topography:	Flat to moderate
Aspect:	Mostly northerly with some easterly

2 LAND INFORMATION

2.1 <u>Area</u>

The general area is zoned for the purpose of agriculture/plantations. The area is remaining under plantation with the current short rotation eucalypt plantation being converted to a long rotation pine sawlog plantation.

2.2 Locality plan and access roads

A location plan is attached. Access to the property is from the Bowelling – McAlinden Road

2.3 Natural features

2.3.1 Principle soil types: The soils are predominantly a clayey loam ranging to gravelly loams.

2.3 Improvements

2.4.1 Buildings

There are no buildings within the plantation establishment area.

2.4.2 Roads, bridges, creek crossings

Internal access roads have been upgraded as part of the harvesting and establishment operation; these roads will be retained when the site is reestablished allowing adequate access throughout the plantation for fire control purposes.

2.4.3 Fences, gates and dams

There are no internal fences on the property because of its previous land use. The condition of the external fences is variable with some being not fit I fit for purpose. There are dams on the property which hold water throughout the year. There are access gates to the property from Bowelling – McAlinden Road.

2.4.4 Powerlines, Telstra cables etc.

There are several powerlines on the property however there is signs of a Telstra cable running along the fence line adjoining the Bowelling – McAlinden Road.

3 PLANTATION ESTABLISHMENT PLAN – (Summary)

1. <u>Areas of native vegetation, including paddock trees to be cleared</u>

There is no additional native vegetation that requires removal as part of the reestablishment. The slash piles from the eucalypt harvest operation will be burnt to remove harvested debris prior to ripping or mounding.

2. <u>Management of logging residue (pine sawlog rotation)</u>

This may involve the heaping and burning of debris (leaves, branch material and timber deemed non-merchantable) by BFE.

3. <u>Control of vermin and declared weeds</u>

BFE will take all reasonable steps to control rabbits and other pests. They will also be responsible for the control of declared plants within the property.

BFE will participate in any community/neighbours based joint fox control.

The site has been checked for the presence of declared weeds.

3.4 Areas to be planted, compartment sizes

The plan attached shows the plantation area; the area has been divided into compartments according to the Guidelines for Plantation Protection.

3.5 <u>Species to be planted and source of seedlings</u>

The site is to be planted with *Pinus radiata* sourced from Tree Breeding Australia seed orchards and raised in a local nursery.

3.6 Direction of planting lines in relation to contours and natural drainage

The direction of the planting lines will be dictated by the existing planting direction, due to the stumps left after harvesting.

3.7 Description of soil preparation methods

The site will be ripped or mounded where necessary using a 4x4-tractor / plough configuration at 4 metre rowing spacing (1111spha) utilizing existing stump lines. Weed control will follow the ripping/mounding operations prior to planting.

3.8 <u>Description of weed control methods, including herbicide application rates and</u> <u>buffer zones</u>

The Blue gum coppice from existing stumps will be the main issue so far as vegetation growth competing with pine seedling establishment. The post harvest coppice will be sprayed to eliminate this competition.

Pre-planting Coppice

Broadspray using 3 litres per hectare of Glyphosate mixed with 60 grams of Metsulfuron-methyl and 1000ml of Pulse per hectare with a wetting agent in 400 litres per hectare of water.

Strip spraying

To control the occurrence of annual grasses across the site, the pre-plant strip spray prescription for mounds is 1 litre per hectare of Glyphosate with 5 litres per hectare of Simazine in 100 litres of water per hectare.

Appropriate buffer zones, in line with label requirements and "Code of Practice for Timber Plantations in Western Australia" guidelines will be observed in order to prevent contamination of waterways. All operations will be carried out in accordance with the weed control guidelines stated in the "Code of Practice for Timber Plantations in Western Australia" by licensed contractors.

3.9 Planting technique

Trees will be planted using a hand-held tree planter. Planting contractors will carry plants from a central plant dump from within the property to sections within the proposed planting area by 4x4 utilities and 4x4 ATV motorbikes.

The proposed plantation is to be planted at 1111 stems per hectare in a 4m x 2.25mconfiguration.

3.10 Access roads and firebreaks

Access roads and firebreaks are shown on the plans attached. External firebreaks are 15 metres wide with 6 metre wide access roads / firebreaks internally. Firebreak maintenance to Local Authority guidelines is the responsibility of BFE on behalf of the landowner.

4 PLANTATION TENDING PLAN

4.1 Grazing strategy

The planting area is suitable for grazing by livestock however the condition of the external fences is variable with most being not fit for purpose.

4.2 Pruning and thinning schedule

Only tree branches that intrude onto designated firebreaks will be mechanically pruned to meet Local Authority guidelines. Trees will be thinned twice before the final harvest but no other pruning is scheduled.

4.3 Fertilising schedule

There will be an initial fertilizer application, banded form pre mounding to prevent nitrification of waterways, to raise soil conditions to an appropriate nutrient level for tree establishment. Type and rates of fertilizer used will be determined following nutrient analysis of soil samples.

Fertiliser applications to sustain tree vigour and health will be applied at ages 0, 2 and 15 years. The fertiliser will be applied by ground or air. Rates and types of fertilisers will be dependent on results from soil and folia sample analysis.

4.4 <u>Weed management</u>

As part of the ongoing maintenance to the tree crop area a second weed control application will occur during the next winter of the year following planting. (ie winter of year 2023). Weed types will determine the weed control prescription.

4.5 Monitoring and contingencies for diseases and pests

Early Growth Monitoring will occur weekly from the end of planting through to the end of February in the following year. It is not envisaged that any diseases will be found that will affect the plantation or surrounding native vegetation. Upon detection of any pest found to be causing damage to the plantation, an appropriate bait and/or spray will be applied where required.

4.6 Road and break maintenance

Access roads and firebreaks are shown on the plans attached. External firebreaks are 15 metres wide with 6 metre wide access roads / firebreaks internally. Firebreak maintenance to Local Authority guidelines is the responsibility of BFE on behalf of the landowner. BFE will monitor firebreak maintenance to ensure compliance.

DBCA Wellington District	Collie	9735 1988	Duty Officer

5.4 Risk of ignition

Potential ignition sources are mainly restricted to lightning strikes, adjoining roads and escapes from burning operations on surrounding land plus machinery caused fires from both plantation and cereal harvesting operations.

5.5 Detection of fires

The landowner, neighbours and passers by, and the existing brigade system will undertake fire detection.

In addition, Department of Biodiversity, Conservation and Attractions (DBCA) spotter aircraft regularly fly within smoke spotting distance of the area and will report all smokes sighted. In the event of a fire, the Shire Chief Fire Control Officer should be immediately notified. The CFCO should in turn contact Bunbury Fibre Exports

5.6 Location Of Fire Control Equipment.

Fire units that may be available are both privately owned and volunteer brigade units derived from neighbouring properties and central depots, as well as plantation industry firefighting resources.

In addition, the plantation industry as a whole has recognised the importance of a unified approach to the control and management of fires within or close to its plantation estate and has developed the Plantation Managers Fire Agreement to ensure the most efficient and effective responses are made to wildfires. BFE are one of nine plantation industry signatories to this Agreement. The combined resources of the industry in terms of both manpower and equipment are extensive and are strategically located both in major centres and on or near plantations throughout the South West and Great Southern Regions. In the event of a fire on or threatening these properties BFE can call on the combined resources of the plantation industry in accordance with the protocols laid out in the Agreement. Information relating to suppression resources at an industry level is also tabled below.

Location and capacity of Brigade fire appliances:

Location	Light Units	Med. Duty Units	HD Units
	Min. 450L	Min. 1900L	Min. 2700L
Duranillin	4		1

Location and capacity of fire appliances:

Location	Light Units Min. 450L	Med. Duty Units Min. 1900L	HD Units Min. 2700L
Ents Forestry Bunbury	2		1
PF Olsen Collie	1		1
WAPRES Manjimup and Bunbury	2		2
BFE Bunbury	2		
FPC Mcalinden		1	

Note: WAPRES also have a 950 loader and 10,000 litre water truck located at Manjimup

Location and capacity of DBCA fire appliances:

Location	Light Units	Med. Duty Units	HD Units
	Min. 450L	Min. 1900L	Min. 2700L
DBCA Blackwood & Wellington Districts Collie and Kirup	8	2	8

5.7 Initial attacks on fires

In the event that BFE becomes aware of a wildfire within, adjacent to or approaching the property, staff must first alert the relevant authorities by calling triple zero.

Staff should then identify the most appropriate and available fire attack options, which are likely to be those in closest proximity to the fire, being those located in Collie or Mcalinden (both within 30 minutes of the plantation). The most appropriate attack option must also consider the suitability of the equipment and personnel in the context of the particular incident.

Brigade units will be the primary fire fighting source supported by Department of Fire and Emergency Services (DFES) funded through the Western Australian Emergency Services levy.

Initial attack on fires will be via the Bush Fire Brigade system coordinated by the local Fire Control Officer, FESA and the West Arthur Shire. At the time of writing, the Boyup Brook Shire have advised that they will not enter plantations or forests on private land but are likely to attend the boundary of the property to assist with fire which is burning in adjacent grassland. DBCA may also attend given the properties proximity to State Forest and Conservation Reserves. BFE and the plantation industry will also supply units for fire suppression, mop-up and control.

Initial attack on a fire will be dependent on head fire rates of spread and fire intensities. It is proposed experienced personnel will assess each fire, in response to the following values in order of priority.

- 1. Human Life.
- 2. Community assets, property or special values (including environmental values).
- 3. Cost of suppression in relation to values threatened.

With fire behaviour and values in mind response strategies should follow this order of priority as a guide -

- 1 Direct attack on headfires where (Head Fire Forward Rate of spread) HFROS allows.
- 2 Indirect attack on headfire by extinguishing flank fire working towards the headfire.
- 3 Limit fire spread to pre-determined internal strategic firebreaks.
- 4 Limit fire spread to compartment breaks.
- 5 Limit fire spread to property boundary firebreaks where property is block planted.
- 6 Fall back to neighbouring properties, roads or where fire can be safely extinguished.

5.8 Access in and around plantation

Access to the plantation is via Bowelling McAlinden Road. The plantation already has trafficable firebreaks in and around the perimeter in accordance with Shire by laws and Guidelines for Plantation Fire Protection. External breaks will be 15 metres wide, internal 6 metres. Access will also be maintained to water supplies. (See map for details)

> Prepared by Bunbury Fibre Exports Page 9

5.9 Method of road, track and firebreak maintenance

Most firebreaks will be sprayed in early spring to ensure the appropriate width of mineral earth break is obtained prior to the fire season. Appropriate buffer zones will be observed in order to prevent contamination of waterways.

Grading will be used if required to improve trafficability on the roads and firebreaks and to construct water barriers if required to manage water-flow on the firebreaks and to minimise the potential for erosion

5.10 Measures to protect powerlines and gas pipelines

Two powerlines exist on this property.

5.11 Direction indicators of water points, road signs and other features

Water points will be marked on the fire control plan, and will be sign posted in the field with regard to direction and position.

Copies of the maps will also be placed in a water proof canister at the access to the property on the Bowelling – McAlinden Road.

5.12 Water supplies

The water points on the property will be maintained in order to provide permanent water supplies throughout the summer months for fire control purposes.

Portable pumps may be required to access water during dry seasons.

5.13 Surrounding fuels

There are no plans, at this stage, to carry out a fuel reduction program on or adjoining the property.

5.14 <u>Fire breaks</u>

Firebreaks will be maintained in accordance with Shire regulations and the Guidelines for Plantation Fire Protection, as shown on the attached map by the landowner.

5.15 Existing plantations in the area

The nearest plantation is 1 kilometre to the South on Bowelling – McAlinden Road and is named MUJA and is managed by Forest Products Commission

5.16 Surrounding values

The closest houses are located 2 kilometres to the North.

5.17 Proximity to townsites

The plantation is approximately 30 km north of the Boyup Brook town centre via the North Boyup Brook and the Bowelling – McAlinden Roads

6. TIMBER HARVESTING PLAN

6.1 Location of harvesting operation

The first and second harvesting or thinning operations on this proposed plantation will take place over the entire area of the plantation as shown on the attached map and will be based on a harvesting plan to be developed closer to the time of harvesting which will be in about 2037. Haulage route will be via Bowelling - McAlinden Road.

BFE will liaise with the Shire when submitting application for Shire Endorsement to use Multi Combination Vehicle (MCV) for road haulage.

Bowelling- McAlinden Road is currently on the Main Roads WA HVS Rav Network for Network 3 and Network 4 Vehicles.

6.2 <u>Timetable</u>

Thinning will occur when the plantation is approximately 15 years of age, and a further thinning at 22 years of age with the final harvest at 30 years of age.

6.3 Harvesting operations

Harvesting will be carried out using conventional plantation harvesting equipment. This currently consists of track mounted harvesters fitted with a felling / debarking head which leave processed logs in the plantation to be picked up by an all-wheel drive rubber tyred forwarder which are later loaded on to trucks. The operation will be a clear fall, which means all standing trees will be removed.

6.4 Machinery and transport

Transport will be by truck configurations, which are legal and permitted by Main Roads and Local Authorities.

Bowelling- McAlinden Road is currently on the Main Roads WA HVS Rav Network for Network 3 and Network 4 Vehicles.

6.5 <u>Environmental safeguards</u>

The extraction of timber will be carried out using appropriate equipment for the plantation and soil conditions and competent personnel to achieve the standards of safety, environmental care and economic efficiency.

6.6<u>Safety</u>

Plantation operations will be as safe as possible and comply with occupational health and safety legislation, and the Safety Code for Western Australian Logging Operations must be observed.

Note: A map including areas to be planted, fire breaks, water points, initial access points and other protective measures must accompany the plan.

ECONOMIC AND SOCIAL IMPACT STATEMENT

Supporting Armstrong plantation proposal

February 2022

1. Background and Scope

The Shire of Boyup Brook has requested Mitsui Bussan Woodchip Oceania (MWO) provide, as part of its planning application to convert the Armstrong plantation in Dinninup to a pine plantation, an Economic and Social Impact Statement (ESIO) with a specific reference to the number of jobs lost or created and the resulting social impact.

The Shire has stated preference to avoid broadscale plantations, to protect the agricultural sector and to promote small-scale forestry / farm forestry within the Shire. While MWO respects the Shire's position to avoid perceived adverse impacts of plantation establishment, MWO agrees with the *FESA Guidelines for Plantation Fire Protection* and other authorities who state that "tree plantings are considered a legitimate rural land use activity".

The scope for preparing any ESIO is broad. In context of the Armstrong plantation, which has been used over the last 20 years as a short rotation Eucalypt plantation, MWO has considered two land uses for comparison in this ESIO. Based on MWO's local experience owning, managing, and disposing of land in the Shire, the two most likely land uses for the Armstrong plantation, given its circumstances and that of the sector, would be:

- Reversion to broadacre farming; and
- Conversion to long rotation (pine) plantation.

The land in question does not include any habitable structures, sheds, or power supply. It does however include established access arrangements around plantation compartments. Considering this, and the general trend of land use discussed further below, "lifestyle" or "mixed farming" is not considered to be a likely land use for this property.

While MWO agrees that small scale forestry / farm forestry would be a positive strategy for the Shire to attract investment, diversify farm incomes, achieve environmental benefits, and enhance productivity of existing farms, the merits of farm forestry as a standalone land use are outside the scope of this ESIO. This said, the viability of small-scale forestry becomes more viable when it is located close to larger scale forestry operations.

2. Approach

MWO has drawn on published reputable information sources to provide an analysis of regional land use trends, to identify and broadly compare the two most likely land uses for the subject property, and finally to describe the contribution of plantation forestry to regional employment and economies. Also provided is some project specific employment and economic contributions.

3. Project contributions to employment and investment

The Armstrong project will contribute significant employment and investment into the region and to the Shire of Boyup Brook. MWO plans to invest approximately \$500,000 in

operational expenditure in the first year, and considerably more than that over the life of the project. An indicative sum to be paid to harvest and haulage contractors for thinning and final harvest operations over the rotation of the plantation is over \$7 million. Further spending in value adding the logs will occur post-harvest. The project will pay various other contractors for additional services during the rotation.

A summary of the expected employment contribution of the project is provided below. Employment beyond the property in value adding and the building industry is massive, and this is discussed further in this report.

Operation	Employment	Timing	Location
Planning	In-house	Full time	Local and National
Seed growing	Service provider	Continuous	State/National
Nursery (seedlings)	Service provider	Continuous	Local
Weed control	Service provider	Seasonal	Local
Fire break maintenance	Service provider	Seasonal	Local
Planting	Service provider	Seasonal	Local/State
Monitoring	In-house	Continuous	Local
Forest inventory	Service provider	Years 10,15,20	Local/State/National
Thinning/haulage	Service provider	Years 12,18	Local/State
Road maintenance	Service provider	Age 12,18,30	Local
Harvest/haulage	Service provider	Year 30	Local/State
Harvest supervision	In-house	Year 30	Local
Business management	In-house	Full time	Local/State/National
Property maintenance	Service provider	Continuous	Local

MWO (or its subsidiary Bunbury Fibre Exports) plans to employ full time staff to manage the Armstrong property and it is noted that MWO have similar intentions for the other existing plantations they own within the Shire.

4. Societal and land use trends

Trends which MWO considers particularly pertinent to this ESIO are:

- Regional demand for building and forest products; and
- Broadacre farm size and production.

4.1 Housing and demand for timber products

Domestic demand for pine sawlogs is growing rapidly. Lumber for Australian housing is predominantly supplied by domestic sawmills, with the balance supplied by imports. The domestic sawn timber industry cannot currently keep pace with demand, which is leading to timber shortages and construction delays (ABARES 2019).

Dwelling unit commencements and new private sector house commencements in the June Quarter 2021 are both up over 50% compared to the same period in 2020 (Australian Bureau of Statistics, Building Activity, Australia June 2021), and this trend is anecdotally continuing with strength. Imports are also currently unable to supply the shortfall of lumber to the Australian building industry.

Given that the building industry generates massive employment and economic activity for WA, and the declining availability of pine sawlogs, the Government of Western Australia has

decided to invest \$350m into growing the pine plantation estate. The State Government funds are mentioned only to highlight the acute need for additional plantations in WA, MWO is not currently a recipient of any of these funds.

4.2 Broadacre farm size and production

It is well understood that across regional Australia, production farms are consolidating. The number of farms has dropped by over 50% between 1978 and 2018, while production has continued to grow (ABARES) – meaning less farms producing more output.

The trend of farm consolidation is widely considered to be the result of farmers pursuing economies of scale. This economy of scale is demonstrated by data produced by ABARES in 2021 that showed "the largest 10% of broadacre farms produced around half of total output, while the smallest 50% of farms produced around 10% of total output." Farms are getting bigger and more efficient, and for good reason.

5. Agriculture and Forestry compatibility

While it is the case that farming and forestry compete for land in some regions, the two industries can be compatible and even complimentary.

5.1 Farm forestry

Using livestock to manage fuel loads beneath plantation trees is common. In a plantation nearby the subject plantation, the Forest Products Commission of WA (FPC) has an agreement with a neighbouring farmer to allow stock beneath the plantation for the mutual benefit of farmer and forester. Mitsui is open to a similar approach at a point where trees have grown to a stage which would allow grazing to occur without damaging plantation trees and when doing so doesn't threaten the health of remnant vegetation.

Farm forestry can improve a farms productivity, profitability, resilience, and sustainability. A multi-year or multi-decade crop like a tree plantation allows farmers to diversify their income and adjust the harvest year to when it suits their cash needs or when timber markets are stronger. Successful small scale farm forestry requires forestry expertise, quality seedlings, professional management and efficient operations and logistics.

Small, poorly managed plantations are commonly unsuccessful and financially unviable. Larger plantations such as the one proposed at Armstrong provide the scale necessary to attract and retain the expertise and efficiency to ensure affiliated financially viable small scale farm forestry. MWO is committed to working with local farmers in the region to help them establish farm forestry plantings and assist them to access to the Australian Carbon Credit Unit (ACCU) market.

5.2 Posts and poles

There exists two post and pole producers in South West WA. These are Koppers Wood Products in Picton and Timber Treaters in Bridgetown. The posts and poles are an important source of materials for agricultural businesses in the region. Pine posts and poles are a light, durable and cost competitive fencing material for farmers. Without the pine plantation industry, farmers may be forced to use relatively heavy and expensive concrete or steel posts.

6. Likely land use and employment impact

The trend of consolidation of Australian farms, and the local experience of Mitsui in regional Australia indicates that if the Armstrong plantation, at 373ha was converted to agriculture, it would likely be absorbed into a larger agricultural enterprise. Even if it was not consolidated into a larger enterprise, combined with the parallel trend of increasing farm machinery size and efficiency, it is unlikely any additional or a greater amount of agricultural employment would be generated than compared to the current circumstances.

Similarly, the shift from short rotation Eucalypt to pine does not adjust the jobs involved at a property level. As a standalone plantation, it is also likely Armstrong could only be feasibly developed as a new pine plantation as part of a broader plantation business. Beyond the property level, however, is the multiplier effect of the product being harvested. Virtually all pine sawlogs in the region are processed in South West WA and final timber products consumed by Australian businesses and families. Considering the full life cycle of a pine plantation from seed production to wall-stud installation, Australian employment is generated at every step, mostly regional employment, and a large proportion in South West WA.

The flow on employment of pine saw logs, which are used almost exclusively for domestic processing and consumption - compared to agriculture, from which 70% of products are exported (ABARES), MWO contends that the total employment on a regional scale is arguably greater for pine plantation than broadacre farming.

The quality of employment is also a consideration. Based on ABARES data and research by Schirmer et al. 2017, the plantation forestry industry generates a greater proportion of fulltime employment than other sectors of the economy (84% Vs 68% respectively). On a national scale, less than 30% of jobs generated by broadacre farming are full time jobs (ABARES). As a result of plantation forestry's high proportion of full-time employment, plantation forestry workers in WA are less likely to earn lower incomes and more likely to earn higher incomes. This research demonstrates that plantation forestry jobs are of a high quality, providing workers with reliable, disposable income to spend in the wider economy and community.

7. Social impact

Given that is it most likely that both broadacre farming and a standalone plantation forestry project would absorb this property into a larger enterprise, the employment generated by either land use is unlikely to be significant enough to have a material impact on society in proximity of the property. MWO contends that social impact at a local scale is more likely to be connected to the quality of employment generated by the land use. Given that plantation forestry generates more full time, high paying jobs than other sectors in WA (Schirmer et al. 2017), it is unlikely that any negative social impact would result from the plantation being established.

As has occurred before, MWO remains committed to positive social impact and can again sponsor within the local community via its subsidiary Bunbury Fibre Exports.

8. Economic and employment impacts of the pine plantation sector

This section considers two key publications based on social and economic research. One is WA specific and the other considers the South West Slopes region of NSW – where a large

and mature pine plantation sector exists. The periods covered by both publications overlap because they coincide with the publication of, among other things: the ABS' 2016 Census of *Population and Housing*, and the 2016 Regional Wellbeing Survey.

The University of Canberra and Econsearch were commissioned by Forest and Wood Products Australia to complete a socio-economic impact study of Western Australia in 2017 (Schirmer et. al. 2017). The report considers employment from *primary production* (growing and harvesting timber), *primary processing* (sawmilling etc.) and *secondary processing* (cabinetry, etc.). The paper does not include peripheral economic activity generated by plantations such as livestock grazing, seed production, recycling timber products after use, recreation etc. A summary of the findings of Schirmer et al. (2017) are presented here.

8.1 Economic value

The total direct and indirect value of output generated by the WA forest industry at the point of sale of primary processed products in 2015-16 was approximately \$1.4 billion. Of this, the greatest share was generated by the pine plantation sector. Using another measure- Gross Regional Product (GRP)- the contribution was \$643m generated by the WA forest industry. The greatest proportion was, again, delivered by the pine plantation sector.

The South West of WA (which includes Boyup Brook shire) contributed \$327m which represented more than half of the total GRP figure and the greatest share. The pine plantation sector generated the greatest proportion of GRP in the WA forest industry.

8.2 Direct expenditure

Total direct expenditure by the WA forest industry by growing, harvesting and primary processing in 2015-16 was \$979m. South West WA accounted for around 60% of this expenditure. Of the nearly \$1b of expenditure, the pine plantation sector accounted for \$366m. Given the push by industry and the State and Federal governments for an increased investment in softwood plantations, the share of expenditure in the pine plantation sector is expected by MWO to significantly increase in coming years.

8.3 Household income

The WA forest industry generated \$354m in household income in 2015-16. Of the three WA regions considered in the research, South West WA received the greatest share of household income at \$196m (56%).

8.4 Employment

The WA forest industry contributed 4,570 direct and indirect jobs to the WA economy in the 2015-16. An additional 1,495 jobs were contributed by secondary processing in 2016. Combined, the total employment contribution is around 6,000 jobs in WA. Of these, almost half, or 2,763 jobs were generated in South West WA. A large proportion of jobs are generated during primary processing.

South West WA is a hub for processing, so the proposed plantation will not only generate jobs at a property level, but the harvested logs will also support many more jobs in the region. Although these might not all be for people who reside within the Shire of Boyup Brook, neither are secondary agricultural jobs all self-contained within the Shire boundaries.

Of the total jobs generated by primary processing in the WA forest industry, the greatest proportion of jobs were generated by the pine plantation sector and the greatest proportion were also generated in South West WA.

8.5 Working conditions

The WA forest industry generates more full-time jobs than other industries. The forest industry employs 84% as full-time staff, compared to the broader workforce which employs 68% as full-time staff. The trend for full-time proportion has remained reasonably steady between 2006-2016 for the forest industry and consistent with the trend of the broader workforce of other industries in WA.

In 2016, forest industry workers were less likely than those in other industries to earn lower incomes (less than \$649 per week), and more likely to earn higher incomes (more than \$1,250 per week). The relatively better incomes are likely to be linked to the high rates of full-time work. The trend between 2006 and 2016 was also positive for both the above metrics – with less workers earning lower incomes and more workers earning higher incomes. Of those earning full-time incomes, the proportion on lower incomes has declined between 2006-2016 and the proportion earning higher incomes has grown over the same period – these are both positive trends.

9. Economic and social impacts of the NSW pine plantation sector

A report published and funded by the NSW Department of Industry and Forest and Wood Products Australia (DPI 2017) investigated the contribution of the large, mature pine industry in the South West Slopes region of NSW in 2015-16. Some key findings are presented below.

- The direct gross output from timber processors in the SW Slopes region was over \$1 billion.
- The total gross output by the agricultural sector to the point of farm gate in the same region was approximately half the above.
- The total expenditure of the tourism sector in the Snowy Mountains region (including ski resorts in the Kosciusko region) was less than half the pine plantation sectors direct gross output.
- When indirect gross output is added in the SW Slopes region, the total output by the pine plantation industry doubles to over \$2 billion.
- The gross regional product of the pine plantation sector was over \$1 billion.
- The household income generated by pine plantation sector was almost \$470 million.
- The greatest proportion of forestry industry expenditure (21%) was wages and salaries.
- The above figures are further evidence that the pine plantation sector is a significant contributor to regional and state economies.

10. Summary

The Armstrong project converts an existing plantation operation into a new one. The project relies on significant investment into the Armstrong property, predominantly paid to local contractors. The project will also generate significant employment during its establishment, ongoing management, and harvesting.

MWO is not aware of any evidence that would suggest converting this plantation land to agriculture would generate any more jobs than the conversion proposed from short rotation Eucalypt to longer cycle pine. Jobs are retained by conversion of the Armstrong plantation and the pine plantation sector as a whole, and these jobs are likely to be of a higher quality than other industries in terms of job security (full-time) and income level.

The benefits of relatively high and stable incomes flowing to forestry workers will increase the likelihood of workers having disposable income to spend in the community.

The proposed plantation development will contribute to the pine plantation sector, generating significant ongoing economic activity, employment, and household income for regional WA. The products from the proposed plantation are likely to be processed in South West WA and the products used by the WA building industry to build housing for West Australians.

If agriculture can be incorporated into the management of the property (livestock to control fuel levels etc.), and if the plantation can provide a level of scale which enables smaller farm forestry to also be developed on neighbouring farms, the social, environmental, and economic benefits are likely to be multiplied again.

Adrian Nicoll Shire of Boyup Brook shire@ boyupbrook.wa.gov.au

Dear Mr Nicoll

RE: LOT 7 BOWELLING-MCALINDEN ROAD BOYUP BROOK – PROPOSED TREE FARM (FORESTRY) – DEVELOPMENT APPLICATION

I refer to your letter dated 05 December 2022 regarding the submission of a Plantation Management Plan (PMP), prepared by Bunbury Fibre Exports and dated 17 October 2022, for the above development application (DA).

This advice relates only to *State Planning Policy 3.7: Planning in Bushfire Prone Areas* (SPP 3.7), the *Guidelines for Planning in Bushfire Prone Areas* (Guidelines) and the *FESA Guidelines for Plantation Fire Protection 2011* (Plantation Guidelines).

It is the responsibility of the proponent to ensure the proposal complies with relevant planning policies and building regulations where necessary. This advice does not exempt the applicant/proponent from obtaining approvals that apply to the proposal including planning, building, health or any other approvals required by a relevant authority under written laws.

<u>Assessment</u>

- DFES notes a change of use from Eucalypt Plantation to Pine Planation
- The DA is situated in an area designated as bushfire prone.
- Given the nature of the proposal, it is noted that compliance with SPP 3.7 and the Guidelines will not be achieved. Relevant components of a Bushfire Management Plan are addressed through the Plantation Guidelines (specifically layout, access and water) and it is noted that there are no habitable dwellings or other structures proposed that would require assessment against SPP 3.7.
- Further clarification is required within the PMP as outlined in our assessment.

Assessment against the FESA Guidelines for Plantation Fire Protection 2011 (Plantation Guidelines)

A PMP must be submitted that adequately addresses all management responsibilities for the plantation and covers all elements raised in section 3 of the Plantation Guidelines.

Торіс	Assessment
Fire	e) Fire detection and reporting mechanisms
Management	The submitted information has not demonstrated compliance with the
Plan	requirements.
	The PMP lists "passers by" assumed by DFES as members of
	the public and "neighbours" as appropriate fire detection
	methods. An Onsite Manager and/or detection patrols on days
	of high risk may be a more appropriate method
	i) Standardised man legends are to be applied across the
	I) Standardised map regenus are to be applied across the
	planation industry
	 Strategic fire breaks and gates are not clearly presented with standardized issue from the Diantation Quidalines
Dissolution Fina	standardised icons from the Plantation Guidelines.
Plantation Fire	4.1 Compartment Size and Layout – modification required
Protection	The submitted information has not demonstrated compliance with the
Specifications	requirements.
	 The PMP does not propose detail on compartment sizes in a
	table or text. The proposed planting map lists compartment
	sizes in excess of 30ha. Compartment sizes should be no larger
	than 30ha where possible or as prescribed by the LG.
	Compartment sizes up to 100ha may be considered if endorsed
	by the LG.
	4.2 Fire breaks and Access
	The submitted information has not demonstrated compliance with the
	requirements.
	The PMP does not propose detail on Passing bays. Passing
	bays are recommended to be provided at 200 metre intervals
	and are a minimum of 20 metres long and 6 metres wide. This
	allows for emergency vehicle sufficient access to move along a
	fire line without the impediment of other vehicles.
	4.3 Water Supplies
	The submitted information has not demonstrated compliance with the
	requirements.
	The PMP does not propose appropriate details on the water
	tank infrastructure 50 0001 of water must be permanently
	available for initial use during fire response
	 Water tanks should be accessible from a bardstand area with
	• Water tanks should be accessible from a hardstand area with
	Weter supply facilities should be designed and constructed as
	 Water supply facilities should be designed and constructed so that heavy duty firefighting equipment is able to access the
	that neavy duty firefighting equipment is able to access the
	supply.
	A strategic water supply should be no more than 5km or a 20m
	turn around from the plantation, whichever is most efficient.
	5.0 Equipment and training
	Every manager, owner and/or occupier has a legal responsibility to try
	and prevent fire from escaping from their land in line with the Bush Fires
	Act 1954. The PMP suggests that Bushfire Brigade (BFB) units
	supported by DFES will be responsible for initial attack of bushfire
	within the Plantation after Bunbury Fibre Exports have been alerted to a
	bushfire. Although BFB's play a vital role in the response to bushfires in
	rural and pastoral areas it is the responsibility of the plantation owner to
	provide its own resources for fire mitigation.

	 Plantation managers have a responsibility to provide adequately trained personnel for safe and effective operation of firefighting equipment and a capability to carry out onsite fire suppression. DFES notes that the PMP proposes that Bunbury Fibre Exports and the planation industry will supply fire units for fire suppression, mop-up and control. The PMP states that a Plantation Managers Fire Agreement exist between other industry partners to provide suppression assistance in the event of a fire however there is no agreement or mechanism 				
	The submitted information has not demonstrated compliance with the requirements.				
	5.2 Training				
	 The PMP does not provided detail of staff training and capability. DFES encourages plantation personnel to join existing local brigades to foster closer working relationships with the community and surrounding plantations. 				
	6.1 Harvesting The submitted information has not demonstrated compliance with the requirements.				
	• The PMP provides no detail on whether the harvesting operation will comply with harvest and vehicle movement bans imposed by the LG, the plantation manager or State Government Total Fire Bans.				
Government Obligations	The PMP references a number of fire response activities to be undertaken by state and local government. It should be noted that responses cannot always be relied upon and that this is not taken to be an obligation on the local fire rescue teams. Modification to the PMP is required.				

Recommendation – insufficient information

As per section 3.2.2 of the Guidelines, the decision maker should inform the Office of Bushfire Risk Assessment (OBRM) at email address - obrm@dfes.wa.gov.au, of any approval of a development that increases the area of bushfire hazard for consideration in the next revision of the map of bushfire prone areas.

If you require further information, please contact Senior Land Use Planner Officer - Tristan Whiting on telephone number 9395 9301.

Yours sincerely

Naomi Mynott DIRECTOR LAND USE PLANNING

22 December 2022 CC: anicoll@plancreate.com.au Dear Mr Nicoll,

RE: Submission regarding Mitsui Bussan / Bunbury Fibre Exports tree farming application for Jackson Plantation.

Thank you for this opportunity to respond to the tree farm application.

Correction on the Mitsui application point 5.16: the nearest houses are reported as 2km away to the north – this is incorrect.

Our dwelling is 350 metres to the west of the closest plantation bluegum coppice.

We have a dam which is 16 metres from the nearest plantation bluegum coppice.

The water from this dam is used to -

- 1. top up rainwater tanks for drinking and household use
- 2. irrigate the organic vegetable garden and fruit trees at our dwelling and also fruit trees situated below the dam (25 metres from the bluegum coppice).
- 3. There are also crustaceans living in the dam.

The rain runoff to the dam flows south down the slope of the plantation western boundary firebreak, across a small clearing on our property, then into the dam. It would absorb any chemical residue present on the firebreak and deposit this into our dam.

Spraying: point 3.8

We have carefully researched the listed chemicals in the weed management plan of the application.

These chemicals raise several concerns for us, prompting an enquiry with the BFE team of William Chow and Rayna Barr (Plantation Forester). At this point we have been assured that there will be no aerial spraying, and that there will be a collaborative approach in regards to spraying in the vicinity of our boundary.

Please be aware that we are <u>vehemently opposed to any aerial spraying</u> which is mentioned in the application. Our view must remain firm in this regard both now and into the future, due to Stephen's chronic health condition which was precipitated by toxic chemical exposure in industry over many years.

This property has been carefully chosen to offer the safest health options for lifestyle and well being. Stephen is highly sensitive to a wide range of chemicals and even minor exposures will cause ill health with lengthy recovery times. Upon the tree farming application approval, we request that our common boundary be managed with the following key considerations

- spraying is to occur ONLY when the wind is blowing away from our property and waterways
- consider spraying only as required on this boundary, not as per a schedule, and grading would be the preferred option for weed control to avoid chemical runoff and contamination.
- We request advanced notification at all times prior to spraying, so that we can take appropriate measures
- Although not stated in 2.3 under natural features we are aware of several winter creeks traversing the property which commonly flow between July and October and feed into our property and eventually into the Collie River catchment. We do harvest fresh water crustaceans across this season.

Winter spraying: point 4.4

- runoff, including the above creeks, has the potential to effect the wetlands and goonac population adjacent to McAlinden Rd, and the marron population of the Collie River.
- Of serious concern: Point (4.4) of the application winter spraying for 2023 it is requested that this be undertaken with keen observance to minimise runoff, allowing for potential rain fall and the lifespan of the chemical feeding into the winter creek.

Spring spraying: point 5.9

- Grading of tracks and firebreaks is most highly preferred to spraying to avoid runoff.
- Please note that this district does have significant spring rains.
- If weed management is being done in early spring we would prefer grading as the method of choice.
- If spraying is required then late spring is preferred as the rainfall potential is significantly reduced.

Flora and Fauna Concerns:

- <u>Australian Bush Bees, + Blue Banded Bees</u> (ground burrows) Critical to retaining cross pollination for diverse and endangered flora, these burrow and nest locally in clay soils, contributing up to 30% of the cross-pollination in Australian crops.
- <u>Black gloved Wallabies:</u> (Kwoora) (threateded) live and breed in this area Numbers appear to be declining
- <u>Miriads of wildflowers and orchids on the property relying on clean rainwater runoff feeding</u> local wetlands on the property from clean winter creeks.
- Locally nesting pairs of <u>Wedgetailed Eagles</u> (threatened) rely on the local ecosystem
- Migratory <u>Rainbow Bee-eaters</u> are resident in this ecosystem from September to May for breading and rely on the wetlands and waterways, and are 'ground burrow nesters' in these areas.

Chemical Notes:

Preplanting Coppice: Glyphosate 450 Nufarm, Metsulfuron-methyl + wetting agent Strip Spraying: Glyphosate 450 and Simazine

Fertilising Schedule: point 4.3

- Please advise us of intended product prior to application
- **Please advise** of any Incidental Pest management requiring extra spraying in the establishment period

Chemical	Use/lifespan	MSDS Weblink	Environmental concerns	Personal Concerns

Easement Road Management: point 3.10 – we request continuance of grading maintenance to the shared easement road whenever suitable equipment is available in the area.

Appendix 1:

Map of the plantation western boundary, our property boundary and marked points of interest.

To Conclude:

Since July 2014, we have always supported our neighbour (Nippon Paper / Mitsui), including fire watching and response (a number of fires have occurred), warning off trespassers seeking firewood or illegal hunting and seeing that they leave the property. We believe that further signage including "no trespassing" is needed in this regard. We have discussed this with Rayna Barr.

To this end we have recently completed a Plantation fire fighting course at Boyup Shire offices so that we can continue to support BFE over the coming years.

We are committed to remain supportive neighbours and hope to continue cordial and open dialogue with BFE management team. Again, we request to be kept abreast of all activity which affects the winter creek waterways and spraying schedules in relation to weather conditions, wind strength, and rain forecasts so that we can take appropriate measures to protect Stephen's health and wellbeing.

With thanks and kind regards,

Stephen & Deirdre Parker Lot 3746 Bowelling-McAlinden Rd, McAlinden

Adrian Nicoll Urban and Regional Planner Shire Boyup Brook

Good morning Adrian. I refer to your email dated the 5th December 2022 enclosing notification of the proposed Tree Farm application on Lot 7 Bowelling-McAlinden Road. It is noted that the proposed tree farm will also extend on to multiple properties within the Shire of West Arthur. The Shire does not have any comment to make at this time as it has not received any development application for this or considered the application.

Kind Regards

Vincent (Vin) FORDHAM LAMONT CHIEF EXECUTIVE OFFICER

Home Business Application for 255 Ables Roads Boyup Brook

Both business operate under-A.J.Woodall Nominees PTY.LTD as Trustee for The Helm Trust ABN; <u>38 595437816</u> Trading as First Time Firearms and Enviro Desalinators Phone; 0412 942 359 Email; info@envirodesalinators.com.au

Address 255 Ables Road Boyup Brook WA 6244

Postal Address PO Box 260 Boyup Brook WA 6255

Included in application document's-

- Eviro Desalinator business description
- First Time Firearms business description
- Property/ building map

Enviro Desalinators

- Sales of desalination systems (water makers) through web marketing to Marine, Rural and Commercial clients.
- Sales of filtration components and systems) through online web marketing to Marine, Rural and Commercial clients.
- Water testing service, Rural and commercial clients.
- Desalination systems are assembled on site from existing components and technology, then transported to clients property/vessel for instal and commissioning.
- Filtration systems designed and assembled on site to meet client's needs, then posted or transported for instal by client or site instal and commission.
- Water testing on clients site is carried out with test kits supplied by Perth laboratory, testing kit then returned to laboratory by way of Australian Post.
- Systems average 65kg and have a footprint of 1.2 x 0.6 x 0.4 meters.
- All motors are electric, and systems produce approximately 60 decibels when being tested.
- Transport of components and completed systems by utility vehicle, no heavy vehicles/machinery or truck required.
- Business requires 10 square meters within workshop to operate.
- Website Link; <u>https://www.envirodesalinators.com.au/</u>

First Time Firearms

- Firearm repair and firearm parts dealer services.
- Repair, maintenance, and cleaning of licenced firearms on site.
- Collection and transport of licenced firearms to and from workshop in purpose equipped utility vehicle, no heavy vehicles/machinery required.
- Collection and transport of firearm components to and from workshop in purpose equipped utility vehicle, no heavy vehicles/machinery required.
- Online web sales of firearm <u>accessories</u>(no WAPO licence required).

- Transport of components and completed systems in purpose equipped utility vehicle, no heavy vehicles/machinery required.
- Business requires 10 square meters within workshop to operate.
- Website currently under construction business name registered.
- All services delivered in full compliance with the WA Firearms Act.
- Dealers licence requirements; <u>https://www.police.wa.gov.au/About-Us/Our-Agency/Police-Licensing-Services/Firearms-Licensing/Dealers-Repairers-Manufacturers-Licences</u>

Shire of Boyup Brook Local Planning Scheme No. 2 Scheme Amendment No. 24

Lots 51, 1007 & 1118 Boyup Brook – Arthur Road, Boyup Brook

Prepared by Edge Planning & Property for Leafield Pty Ltd www.edgeplanning.com.au December 2022

PLANNING AND DEVELOPMENT ACT 2005 RESOLUTION DECIDING TO AMEND A TOWN PLANNING SCHEME

SHIRE OF BOYUP BROOK LOCAL PLANNING SCHEME No. 2

AMENDMENT No. 24

RESOLVED that the local government in pursuance of Section 75 of the Planning and Development Act 2005, amend the above Local Planning Scheme by:

- 1. Rezoning Lots 51, 1007 and 1118 Boyup Brook Arthur Road, Boyup Brook from the 'Rural' zone to the 'Special Use (SU2)' zone.
- 2. Inserting the following provisions in Table 5 Special Use Zones in Scheme Area:

No.	Description of land	Special use	Conditions	
SU2	Lots 51, 1007 and 1118 Boyup Brook – Arthur Road, Boyup Brook	A future residential estate, contemplating both residential and rural residential zones, where the mix of lots is to be addressed via a structure plan. Permissibility: Uses permitted within the areas designated as 'Residential' are as per the Zoning Table. Uses permitted within the areas designated as 'Rural Residential' are: Ancillary Dwelling 'P' Art Gallery 'D' Bed & Breakfast 'D' Dams 'D' Community Purpose 'D' Family Day Care 'A' Holiday Accommodation 'A' Home Business 'D' Home Occupation 'P' Home Office 'P' Home Store 'D' Industry – Cottage 'D' Recreation – Private 'A' Repurposed Dwelling 'D' Residential Building 'A' Rural Home Business 'A' Second Hand Dwelling 'D' Single House 'P' All other uses are 'X' (prohibited).	 General application The conditions in this schedule apply to SU2 in addition to all other relevant provisions in the Scheme. If there is a conflict between any other provision in the Scheme, this Schedule prevails. Structure Plan Prior to subdivision and development, a structure plan is to be prepared and endorsed by the WAPC. Proposed future zones and reserves in the structure plan are to accord with the zones and reserves of the Scheme. In addition to the matters required in clause 16 of the deemed provisions, the structure plan is to address: Servicing arrangements, including Arrangements for an electricity supply; Provision of a licensed water supply for lots designated for residential purposes; or If a licensed water supply is not to be provided, lots are to be designated as rural residential with a minimum lot size of 1 ha; Site and Soil Evaluation to demonstrate a suitable approach to wastewater disposal. 	
			management as per a	

No.	Description of land	Special use	Conditions
			 Local Water Management Strategy. b. Access and egress for bushfire safety, in accordance with State Policy. c. Foreshore management, including: Allocation and design of Foreshore reserves and areas of public open space; Proposed arrangements for weed control, revegetation, fencing, pedestrian access and restrictions on vehicular access. d. Traffic Impact Assessment, including potential upgrades to existing roads and intersections servicing the proposed estate. e. A movement network that provides suitable transport options for vehicle, bicycles and pedestrians.
			 Subdivision Future subdivision shall generally be in accordance with a Structure Plan endorsed by the WAPC. Aboriginal heritage protection as per an ethnographic and archaeological survey by a qualified consultant. Based on site conditions, at subdivision stage, the Commission may impose added conditions relating to: (a) Revegetation and landscape planning addressing: i. Buffer strip planting adjoining Boyup Brook – Arthur Road/Bode Street and surrounding rural use land. ii. Ongoing separation of lots to remaining rural use land. iii. Protection of high value native vegetation to maintain rural landscape character.
			Boyup Brook – Arthur Road/Bode Street. (c) Notifications on Title relating to:

No.	Description of land	Special use	Conditions
			 Nuisance impact to residential amenity from adjacent rural operations; or ii. The Shire's resource recovery centre.
			Note: Structure plan areas are to be zoned progressively, as land is subdivided, and when opportunities arise for scheme amendments.

3. Amending the Scheme Map accordingly.

Determines Amendment No. 24 is a standard amendment under the provisions of the *Planning and Development (Local Planning Schemes) Regulations 2015* for the following reasons:

- An amendment relating to a zone that is consistent with the objectives in the scheme for that zone;
- The amendment is consistent with the draft Local Planning Strategy;
- The amendment would have minimal impact on land in the scheme area that is not the subject of the amendment; and
- The amendment does not result in any significant environmental, social, economic or governance impacts on land in the scheme area.

- Shire of Boyup Brook 2. DESCRIPTION OF LOCAL PLANNING Local Planning Scheme No.2 SCHEME:
- 3. TYPE OF SCHEME:
- 4. SERIAL NUMBER OF AMENDMENT:
- 5. PROPOSAL:

Local Planning Scheme 24

- i) Rezoning Lots 51, 1007 and 1118 Boyup Brook -Arthur Road, Boyup Brook from the Rural zone to the Special Use (SU2) zone.
- ii) Adding provisions to Table 5.
- iii) Amending the Scheme Map accordingly.

REPORT BY THE SHIRE OF BOYUP BROOK

1. INTRODUCTION

The Shire of Boyup Brook seeks the support of the Western Australian Planning Commission (WAPC) and the approval of the Hon. Minister for Planning to rezone Lots 51, 1007 and 1118 Boyup Brook -Arthur Road, Boyup Brook (the 'site') from 'Rural' to 'Special Use (SU2)'.

In order to progress subdivision and development of the site, in a manner that reflects the strategic direction of the draft Shire of Boyup Brook Local Planning Strategy, it is proposed to rezone the site to 'Special Use'.

The purpose of this report, supporting technical reports and associated plans are to explain the proposal and set out the planning merits of the Amendment which is consistent with the planning framework including the draft Shire of Boyup Brook Local Planning Strategy.

The Amendment is supported by a Local Structure Plan and associated Local Structure Plan report.

The site's suitability for residential and rural residential development includes that it essentially adjoins the Boyup Brook townsite and the technical investigations reveal the site capable is of accommodating residential and rural residential development. More detailed planning and investigations will occur at

the subdivision application, development application and building permit stages.

The site offers the potential to provide a significant supply of residential and rural residential lots in the short to medium term which are consistent with the Shire's Strategic Community Plan.

Photo 1: central location

2. BACKGROUND

2.1 Cadastral details

A copy of the Certificates of Title are provided in Attachment 1.

Cadastral details for the site are summarised below in Table 1.

Table 1 – Cadastral Details						
Lot	Diagram	Volume	Folio	Area	Owner	
51	62150	2727	332	110.2788 hectares	Leafield Pty Ltd	
1007	103924	2618	816	107.4556 hectares	Leafield Pty Ltd	
1118	103925	1194	20	4.0481 hectares	Leafield Pty Ltd	

The site has a total area of 221.78 hectares.

2.2 Regional context

The site is located in the Shire of Boyup Brook and adjoins the Boyup Brook townsite. Boyup Brook is located approximately 260 kilometres south of Perth and 100 kilometres south-east of Bunbury. Boyup Brook is a district centre in the Warren-Blackwood Region. The town provides a range of services and facilities to residents and visitors.

2.3 Local context

The site's location is set out in Attachment 2 while Attachment 3 shows the Amendment site.

As outlined above, the site comprises three separate land parcels being Lots 51, 1007 and 1118 Boyup Brook – Arthur Road, Boyup Brook.

The western boundary of the site is around 1.5km north-east of the Boyup Brook townsite. Nearby uses include rural living development, the Country Music Festival site (including tourist accommodation), public uses and rural uses. Attachment 4 outlines the Context, Opportunities and Constraints Plan. This also shows that most of the site is unconstrained for development. The site borders the Blackwood River which adds to the site's attractiveness.

2.4 Physical characteristics

The site is outlined in Attachments 3 and 4 and has the following characteristics and features:

- It is an attractive site bounded by Bode Street to the west, Boyup Brook

 Arthur Road to the north, the Blackwood River to the east and south, rural land to the north-east and rural zoned land used for rural living purposes to the south-west. As outlined on the Existing Scheme Map, a Structure Plan Area is identified opposite the site on the southern side of the Blackwood River;
- It is used for rural (grazing) purposes;
- It contains several dams;
- It is predominantly cleared with small pockets of native vegetation, which have been parkland cleared;
- The site contains a range of slopes. It is overall moderately sloping. Elevation varies across the site from approximately 185 metres AHD at the lowest point near the Blackwood River, to approximately 262 metres AHD in a central part of the site. There are some smaller steeper sections as outlined in Attachment 4;
- There are seasonal watercourses and some drainage lines;
- It has extensive frontage to the Blackwood River;
- Lot 51 contains a dwelling and several outbuildings;
- The soils are overall conducive for onsite sewage disposal as evidenced by Attachment 5;
- There are various soil types which generally relate to the associated vegetation. Details are in Attachment 5; and
- It is not on the Department of Water and Environmental Regulation's Contaminated Site Database.

The site attributes are considered overall favourable to generous sized residential and rural residential development. More detailed investigations will occur at future planning and design stages.

Overall, the site has considerable opportunities and manageable constraints to accommodate residential and rural residential development in the range of 2000m² to around 1 hectare.

2.5 Existing services

2.5.1 Overview

The site is currently provided with relevant services appropriate for rural land. Infrastructure is required to be extended, provided or as required upgraded to facilitate residential and rural residential development.

2.5.2 Roads

The site adjoins the sealed Bode Street and Boyup Brook – Arthur Road (which are Shire managed roads) and also has access to an unconstructed road reserve near the southern boundary.

2.5.3 Drainage

The site contains three seasonal watercourses along with minor drainage lines. The site drains to the Blackwood River which is located to the east and south of the site. There is no nearby Shire piped drainage systems.

2.5.4 Water supply

The site is not connected to Boyup Brook's reticulated water system operated by Water Corporation. The site is currently located outside of Water Corporation's planned water supply area given the current 'Rural' zoning.

2.5.5 Wastewater disposal

The site is not connected to the reticulated sewerage system. The site contains a dwelling, which is serviced by on-site wastewater disposal.

2.5.6 Power and telecommunications

Power and telephone services are currently available to the site.

2.6 Heritage

The Department of Planning, Lands and Heritage's database reveals there is a Registered Aboriginal Heritage Site (ID 20434) applying to the property. The Registered Aboriginal Heritage Site has mythological significance associated with the Blackwood River and tributaries. Preliminary contact has been made with the South-West Aboriginal Land and Sea Council and the Department of Planning, Lands and Heritage's Aboriginal Heritage team to ensure Aboriginal heritage values respected, appropriately are are addressed and to understand how to respectfully develop the property. Additionally, land developers have an obligation under the Aboriginal Heritage Act 1972 and the Aboriginal Cultural Heritage Act 2021, to protect places and objects in Western Australia that are important to Aboriginal people because of the connections to their culture.

The proposed Scheme provisions for SU2 set out the need to prepare an ethnographic and archaeological survey (by a qualified consultant) at the subdivision stage.

The site does not contain any structure or place of non-indigenous heritage significance on the Shire of Boyup Brook Municipal Inventory (heritage survey) or on the Shire's Heritage List.

2.7 Landowners details

The Director of Leafield Pty Ltd is Mr Mark Bombara who owns the site. Mark has lived on the site for many years dividing his week between Boyup Brook and Perth.

Mr Bombara has an established trackrecord of delivering development in regional communities including inland county towns where development risks are considerably greater than developments 'on-the-coast'. This includes at the Highland Bridgetown Estate in Bridgetown, at Greenland Pemberton and other developments in Donnybrook and Manjimup. In a time when developers are not always looking to make a long-term investment, Boyup Brook has an opportunity to progress and work with a developer who has shown a commitment to Boyup Brook over many years. Significantly, Mr Bombara has the will, experience and financial capacity to develop the site if relevant approvals are obtained.

Photo 2: extensive views

3. PLANNING FRAMEWORK

3.1 Overview

The site and proposed residential and rural residential subdivision/development are subject to a range of State Planning Policies, WAPC publications and bulletins, WAPC regional strategies, along with Environmental Protection Authority (EPA) bulletins, various Shire strategies and policies, along with the Shire of Boyup Brook Local Planning Scheme No. 2 (LPS2).

The following section will outline how the proposed Amendment suitably addresses relevant planning policies, strategies, plans and LPS2. These documents consider key planning, environmental, servicing and economic development matters. In summary, the Amendment is consistent with the State, regional and local planning framework which support residential and rural residential subdivision in areas which are in close proximity to towns and where land suitability and capability are appropriately addressed.

3.2 State planning framework

3.2.1 Overview

The following strategies and policies are of relevance to the Amendment:

- State Planning Strategy 2050 sets a broad strategic plan for Western Australia built on sustained growth and prosperity. The Strategy highlights the importance of job creation and supports developing strong and resilient regions. The Strategy also supports a diverse, liveable, connected and collaborative State;
- State Planning Policy 1 State Planning Framework Policy;
- State Planning Policy 2 Environment and Natural Resources;
- State Planning Policy 2.5 Rural Planning;
- State Planning Policy No. 2.9 Water Resources - a Local Water Management Strategy is set out in Attachment 5;
- State Planning Policy No. 3 Urban Growth and Settlement;

- State Planning Policy 3.7 Planning in Bushfire Prone Areas – the site is partly classified as a Bushfire Prone Area shown as at https://maps.slip.wa.gov.au/landgat e/bushfireprone/. А Bushfire Management Plan is set out in Attachment 6. This assessment addresses SPP 3.7 and the Guidelines
- for Planning in Bushfire Prone Areas;
 State Planning Policy 5.4 Road and Rail Noise – the site is not within the 'trigger distance';
- State Planning Policy 7.3 Residential Design Codes – Volume 1;
- Operational Policy 1.1 Subdivision of Land – General Principles;
- Development Control Policy 2.2 Residential Subdivision – residential lots are required to be capable of development, be located within an area which is suitable for subdivision in terms of its physical characteristics and be provided with an appropriate vehicle movement network;
- Development Control Policy 2.6 Road Planning;
- Liveable Neighbourhoods;
- Government Sewerage Policy; and
- EPA Guidance Statements including Guidance Statement 33 – Environmental Guidance for Planning and Development and Guidance Statement 3 – Separation Distances between Industrial and Sensitive Land Uses.

3.2.2 State Planning Strategy 2050

The State Planning Strategy 2050 sets a broad strategic plan for Western Australia built on sustained growth and prosperity. The vision (page 20) is:

'Sustained growth and prosperity

The vision of sustained growth and prosperity envisages a future where Western Australians enjoy high standards of living, improved public health and an excellent quality of life for present and future generations.'

Sustained growth (page 20) consists of:

- 'A diverse state; offering a diversity of ecosystems, landscapes, enterprises, people and cultures.'
- 'A liveable state; the place of choice for the brightest and best.'
- 'A connected state; as connected to the rest of the world as any other place.'
- 'A collaborative state; enabling alignments that progress the State's sustained growth and prosperity.'

The Strategy (page 20) seeks the following:

'By 2050, Western Australia will have a diverse range of interconnected and vibrant local communities and regional centres. The people in these communities will be healthy, resilient, active, prosperous, respectful of cultural difference and participate in the public domain.

Standards of living will continue to be amongst the highest in the world. Improved connections and smarter technologies will enhance the State's ability to attract global and domestic investment capital where and when it is most needed.

A 'can do' attitude will prevail, inspiring new ways of thinking and working, which will deliver optimal outcomes for the economy and communities of Western Australia.'

The Strategy establishes objective and the strategic approach in relation to economic development, physical infrastructure, social infrastructure, environment and security. The Strategy is the lead strategic planning document within Government which informs all other State. regional and local planning strategies, policies and approvals.

The Amendment is consistent with the Strategy. This includes that it supports sustained growth and economic development in Boyup Brook, it promotes development adjoining the townsite and it promotes liveability.

3.2.3 State Planning Policy 1 – State Planning Framework Policy

The State Planning Framework Policy (Variation No. 2) applies to all land within Western Australia. It is an amalgamation of all planning policies, strategies and guidelines that provide direction on the form and methods of growth and development throughout the State. It identifies that the primary aim of planning is to provide for the sustainable use and development of land. The Amendment and the associated Structure Plan have taken consideration of SPPP1.

3.2.4 State Planning Policy 2 – Environment and Natural Resources Policy

The Policy defines the principles and considerations that represent good and responsible planning, in terms of environment and natural resource issues, within the framework of the State Planning Strategy. The Policy is supplemented by more detailed planning policies on particular natural resources matters that require additional information and Noting the site is largely quidance. cleared and remaining native vegetation is sought to be conserved, Attachment 5 considers and addresses matters arising from SPP2.

3.2.5 State Planning Policy No. 2.9 Water Resources

The Policy provides guidance in the planning, protection and management of surface and groundwater catchments, including implementation of total water cycle management principles in the land use planning system.

Attachment 5 sets out the broad approach to managing stormwater for the site. The Local Water Management Strategy adopts water sensitive urban design which is consistent with the Policy. Further details will be addressed at the subdivision stage through preparation and implementation of an Urban Water Management Plan.

3.2.6 State Planning Policy No. 3 – Urban Growth and Settlement

This Policy sets out the principles and considerations which apply for urban growth and settlement in Western Australia. In summary, the policy objectives are to:

- Promote a sustainable settlement pattern including providing sufficient and suitable land for a wide variety of housing;
- Build on existing communities with established services and infrastructure and to promote local economies;
- Address environmental, heritage and community considerations;
- Promote accessibility, housing choice and an identifiable sense of place; and
- Ensure appropriate servicing which is provided in an efficient manner.

The Policy sets out requirements for sustainable communities. This includes using land efficiently, convenient access to employment, retail and community facilities, quality design, addressing environmental considerations and supporting a positive planning framework which seeks to facilitate and promote quality development.

The consolidation and expansion of existing settlements is preferred to the development of new settlements. The Amendment is consistent with the Policy given the site is close to the Boyup Brook townsite, a wide variety of housing lot sizes are proposed and it will be appropriately serviced.

3.2.7 State Planning Policy No. 7.3 Residential Design Codes (Volume 1)

A range of lot sizes will be created to address site conditions with the smallest lot size being 2000m² (Residential R5 which has a 30 metre frontage) to approximately 2 hectares. Future subdivision will be guided by the Local Structure Plan. Future residential development will be guided by the R Codes including setbacks, site planning and design, and car parking. Rural residential development will be guided by LPS2.

3.2.8 State Planning Policy 3.7 Planning in Bushfire Prone Areas

Portions of the site are classified as bushfire prone. Accordingly, State Planning Policy 3.7 Planning in Bushfire Prone Areas (SPP 3.7) relates to a portion of the site. SPP3.7 is complemented by Guidelines for Planning in Bushfire Prone Areas.

A Bushfire Management Plan is set out in Attachment 6 to address SPP 3.7 and the Guidelines.

3.2.9 Development Control Policy 1.1 Subdivision of Land – General Principles

This Policy sets out the general principles used by the WAPC in determining subdivision applications. It indicates the WAPC's key requirements for the creation of new lots. Policy objectives include to:

- Ensure that the subdivision of land is consistent with State Planning Policy No. 1 State Planning Framework and relevant WAPC policies and plans;
- Ensure the subdivision pattern is responsive to the characteristics of the site and the local planning context;
- Ensure that the subdivision is consistent with orderly and proper planning and the character of the area; and
- Facilitate development which achieves appropriate community standards of health, safety and amenity.

The Amendment is consistent with Policy objectives.

3.2.10 Liveable Neighbourhoods

Liveable Neighbourhoods is an operational policy of the WAPC, which implements State Planning Strategy objectives, to guide sustainable urban development. The principal aim of Liveable Neighbourhoods is to provide for walkable neighbourhoods which are located around activity centres of compatible mixed uses in order to reduce car dependence and foster a strong local identity.

Liveable Neighbourhoods provides guidance on a number of design elements including the movement network, lot layout, public parkland, urban water management and utility planning. The objectives of community design are a balance between urban and environmental outcomes.

The Amendment and associated Local Structure Plan have regard to relevant elements of Liveable Neighbourhoods noting that Liveable Neighbourhoods has generally been applied to the Perth Metropolitan region and large regional centres. The Local Structure Plan has considered the movement network, range of housing types and lot sizes, lot layout, environmental provision of conservation/public parkland. and effectively managing stormwater. These details will be refined at the subdivision stage.

Proposed residential development on the site is located 1.5 kilometres from the Boyup Brook townsite. No activity centres are proposed for the Amendment site. Instead, proposed development is intended to support the existing town centre and other services/facilities in Boyup Brook.

The site adjoins the Blackwood River and it contains seasonal watercourses. Accordingly, there are environmental and recreational assets in close proximity (walking distance) of proposed lots. The Amendment will promote walkable communities and cycling.

3.2.11 Planning for Bush Fire Protection Guidelines

The document forms the foundation for fire risk management planning on private land in Western Australia. As set out in Attachment 6, proposed residential and rural residential development can address management issues including development location, vehicular access, water, siting of development, and design of development.

The site is located in an area of predominantly moderate bushfire hazard level on cleared land. There are two small areas within the site which have an extreme bushfire hazard level. Bushfire levels can be suitably addressed to enable suitable development in these areas.

At this stage, a subdivision design is not finalised. BAL contour mapping will be prepared at the subdivision stage to demonstrate compliance with the Guidelines including each lot having sufficient areas of BAL-29 or below.

Further details relating to fire management are set out in section 5.6 and Attachment 6.

3.2.12 Visual Landscape Planning in Western Australia Manual

This document was released by the WAPC and the former Department for Planning and Infrastructure in November 2007. Amongst matters, it provides principles and auidelines for the location, siting and design of buildings, structures and new planting. Page 3 states 'The aim should be to accommodate change while possible, maintaining and, where enhancing the quality of our landscapes.'

It is appreciated that portions of the site can in part be viewed from Bode Street/Boyup Brook-Arthur Road. The Local Structure Plan and this Amendment consider landscape impacts including in section 5.7.

3.2.13 EPA Guidance Statements

The EPA has prepared a series of Guidance Statements. These statements address specific issues, and sometimes set preferred limits for various activities. The statements provide assistance to proponents of development and other decision-making authorities on the expectations of the EPA. Of particular note to the Amendment are Guidance Statement 33 – Environmental Guidance for Planning and Development and Guidance Statement 3 – Separation Distances between Industrial and Sensitive Land Uses (2005). Guidance Statement 3 is further considered in section 5.5.2.

3.2.14 Government Sewerage Policy

The Government Sewerage Policy establishes the Western Australian

Government's position on the provision of sewerage services in the State through the planning and development of land.

Noting the proposed large lot sizes and the site conditions, the wastewater management assessment from Bio Diverse Solutions (Attachment 5) addresses the Government Sewerage Policy for this stage of the planning process. This sets out the property is suitable for on-site disposal based on the report recommendations including on siting.

3.3 Regional planning framework

3.3.1 South-West Regional Planning and Infrastructure Framework

The Framework supports a diverse and adaptive economy and supporting population growth. The Framework identifies Boyup Brook as a 'town'.

The Framework's vision is expressed through objectives and an agreed strategic direction for economic growth, population and sustainable settlements, transport, community infrastructure, essential services, natural assets, and culture, heritage and visual landscape. There is also a list of regional planning initiatives, a list of committed projects, a list of anticipated directions for regional infrastructure, and a framework map.

The Framework highlights there are opportunities for in-migration from retirees and tree-changers. The Framework promotes development in or near existing communities. Accordingly, the Amendment is consistent with the Framework.

3.3.2 Warren-Blackwood Regional Planning Strategy

Boyup Brook is identified as a 'district centre'. The site is located in Planning Unit BR3 – Tweed and parts of BR3 are suitable for townsite and rural residential development.

3.3.3 Warren-Blackwood Rural Strategy

The Strategy provides in-principle support for rural residential development (page 53) and rural smallholdings development (page 55) within 5km of an urban area. The site is located within Planning Unit BR3 Tweed. The site is broadly outlined for nonrural use on Map 9.

3.3.4 South West Regional Blueprint

The Blueprint establishes priorities for economic development and growth of the South West region and provides an analysis of local, regional, national and global factors influencing the region. A strategic economic growth plan and proposed transformational projects are set out. The Blueprint supports growing the region's population, promoting a vibrant economy and growing the economy. The Amendment is consistent with the Blueprint.

3.4 Local planning framework

3.4.1 Draft Shire of Boyup Brook Local Planning Strategy

The draft Shire of Boyup Local Planning Strategy includes the site in a Planning Area as 'Residential & Rural Residential' (see Attachment 7). The draft Strategy also summarises planning considerations and issues/opportunities for the site.

The draft Strategy recognises that the Boyup Brook townsite will not be provided with infill sewerage. The lack of infill sewerage is expected to result in only modest growth prospects for the existing townsite. Most of the proposed growth will occur on greenfield land close to the townsite (including on the Amendment site).

The Strategy notes that people are moving to the region and taking up residence on the fringes of the Boyup Brook townsite, on rural lifestyle properties.

The Strategy notes that Boyup Brook needs more lots in the vicinity of around $2000m^2 - 5000m^2$. The Strategy supports a diversity of lot sizes including $4000m^2 - 5000m^2$.

The inclusion of the site as a Planning Area recognises that subject to suitable technical investigations, the site is broadly suitable and capable for development. The site:

- Is cleared and has low environmental impacts and will deliver high economic and community outcomes;
- Will comply with State Planning Policy 3.7 Planning in Bushfire Prone Areas and the Guidelines for Planning in Bushfire Prone Areas. This includes access routes in different directions;
- Adjoins a sealed road which enhances viability compared to an unsealed road;
- Is an attractive and marketable property, including that it adjoins the Blackwood River and has a range of views/aspects; and
- Is owned by a landowner who has the will, experience and financial capacity to develop the site.

The Amendment site provides a realistic opportunity to grow and complement the Boyup Brook townsite with lot sizes and pricing that are appropriate for a country town and for market expectations.

Without landowners/developers willing to 'play the long game', committing to investing in Boyup Brook over the longterm and having experience in delivering larger scale subdivisions, it is expected that lot creation and associated population growth (if any) will be low. Practically, there are considerable risks, high upfront costs and a delay in generating a profit in undertaking land development in Boyup Brook.

3.4.2 Shire of Boyup Brook Local Planning Scheme No. 2

The site is zoned 'Rural' in the Shire of Boyup Brook Local Planning Scheme No. 2 (LPS2). The 'Rural' zone is intended for pursuits primarily agricultural with permitted uses within the Zoning Table extensive intensive including and agriculture. The existing Rural zoning is not applicable to the use and development of the site as envisaged by the draft Local Planning Strategy.

The current LPS2 zonings and reservations relating to the site and adjoining land are shown on the Existing Scheme Map. Surrounding land is zoned 'Rural' and 'Rural Residential' while land to the south and east is reserved as 'Public Open Space'. A Structure Plan Area is located on the opposite side of the Blackwood River.

Boyup Brook – Arthur Road and Bode Street are reserved as a 'Regional Distributor Road'.

The aims of the Scheme are outlined in clause 9. This includes to 'provide for reasonable expansion of residential, industrial and commercial uses based on the District's established structure'.

Other sections of LPS2 relevant to the Amendment include:

- Clause 16 zone objectives;
- Table 3 Zoning Table; and
- Clause 21 and Table 5 Special Use zones.

Given the above, the Amendment is consistent with LPS2 aims, objectives and future development can achieve required standards. The Amendment will assist to create an appropriate interface zoning between the townsite and existing Rural Residential zoned land and agricultural uses. The site is appropriately located for residential and rural residential development and it will address the aims and objectives of LPS2.

The proposed Special Use zoning can accommodate envisaged uses including low-key employment and tourism accommodation uses.

3.4.3 Shire of Boyup Brook Local Rural Strategy (2010)

It is understood that the only WAPC endorsed planning document, specifically relating to the Shire of Boyup Brook, is the Shire of Boyup Brook Local Rural Strategy (2010). The Local Rural Strategy identifies Lots 51, 1007 and 1118 as 'potential townsite expansion'. Similarly, the draft Shire of Boyup Brook Townsite Strategy (2014) identifies the land as 'Townsite Expansion Area'.

3.4.4 Local Planning Policies

The Council has endorsed a number of planning policies and various policies are of relevance to the future subdivision and development of the site including drain and fill, naming new roads and fire. The Structure Plan and Amendment have taken into account relevant Local Planning Policies.

3.4.5 Shire of Boyup Brook Strategic Community Plan 2021-2031

The Plan recognises the importance of population growth, maintaining and upgrading facilities and infrastructure, increasing new housing, supporting economic development and creating new jobs.

The Strategic Community Plan sets the community's vision for the future and is the principal strategic guide for the Council's future planning and activities. The vision for Boyup Brook is:

'Growing our community together. Our Shire will be:

A place for people, with a sense of community, one that is active, vibrant, engaged and connected.

A place with community and visitor facilities that are well maintained and further developed as required.

A place that is safe and secure. An inclusive place that nurtures local youth and aging population and retains local health and medical services.

A place that grows housing and employment opportunities through economic development based on our local comparative advantage.'

The Amendment is consistent with the vision and objectives of the Strategic Community Plan. Key implications for the Amendment include promoting new investment and new housing, protecting natural resources, supporting economic development and the appropriate provision of infrastructure.

3.5 Planning framework implications for Amendment

Common themes of the policies, strategies, plans and LPS2 and their implications for the Amendment include:

- Expansion of the Boyup Brook townsite has been anticipated and supported in the draft Local Planning Strategy;
- Boyup Brook will remain the Shire's key centre and a focus for employment and population growth;
- Promoting residential and rural residential development in appropriate locations;
- Ensuring that key environmental assets are conserved or enhanced;
- Addressing key environmental assets and bush fire risk;
- Addressing land use compatibility;
- Consolidation of existing settlements, including Boyup Brook, is preferable to isolated 'stand-alone' developments;
- Support for a variety of housing and promoting liveability;
- Appropriate servicing including addressing stormwater management;
- Addressing landscape impact;
- Supporting local communities and local economies;
- The need for structure planning and adopting relevant principles of *Liveable Neighbourhoods;* and
- A requirement for sustainable and quality design.

Based on the above, the Amendment and associated Structure Plan are consistent with the planning framework. In particular, the Amendment promotes a sustainable settlement pattern as it builds onto a district centre, environmental assets will be conserved and the subdivision will be appropriately serviced.

4. AMENDMENT PROPOSAL

4.1 Overview

The intent of the Amendment is to provide for a range of residential and rural residential lot sizes which complement the Boyup Brook townsite. The purpose of the Amendment is to:

- Facilitate new lots and dwellings in Boyup Brook;
- Provide for the orderly and proper planning of the site in terms of land use, servicing and design; and
- Address the planning requirements set out in LPS2 and in the planning framework.

The Amendment is supported by a Local Structure Plan. The Local Structure Plan (Attachment 8) provides a framework for the site to be subdivided and developed. Future subdivision and development is required to be in accordance with the Local Structure Plan.

4.2 Proposed scheme amendment

The Amendment proposes to rezone the site from the 'Rural' zone to the 'Special Use (SU2)' zone. The Amendment will facilitate subdivision/development between 2000m² and approximately 2 hectares. To control and guide subdivision development, various planning and provisions are proposed to apply to Special Use (SU2). To address site opportunities and constraints, development will be setback from the Blackwood River and seasonal watercourses.

4.3 Local Structure Plan

In support of the Amendment, a Local Structure Plan is provided in Attachment 8 which provides a framework for future subdivision and development. Separate documentation is provided with the Local Structure Plan. The Local Structure Plan has considered the site's context, including adjoining and nearby land uses, bushfire management, servicing, environmental assets and landscape considerations.

The development of the site requires some degree of flexibility relating to design details. Factors that may alter the design include servicing requirements and market demand.

The Local Structure Plan has been informed by technical investigations which includes servicing, environmental, bushfire, and land management considerations.

The Local Structure Plan assesses the future subdivision/development of the land having considered its physical form and relationship with its context and physical attributes. The Local Structure Plan will provide a framework to develop the site for residential and rural residential land use which is consistent with the Shire's strategic planning vision.

The Local Structure Plan allocates land for housing (residential and rural residential), public open space and infrastructure. The predominant land use is residential followed by rural residential. The Local Structure Plan will set proposed land uses, densities and the estimated lot/dwelling yield. The Local Structure Plan supports a variety of lot sizes, budgets and lifestyles.

The proposed land uses are complementary with adjoining and nearby uses. More detailed planning and investigations will occur at the subdivision, development application and building permit stages.

The Local Structure Plan addresses key development considerations for the site and outlines:

- Residential and rural residential lots ranging between 2000m² – 2 hectares;
- A highly connective design with linkages to the surrounding properties and roads;
- Roads which are aligned to avoid native vegetation wherever possible. The road reserves are indicatively 20

metres wide and will incorporate stormwater pipes or swales for managing stormwater;

- Buildings can be located on cleared land which are setback from Boyup Brook-Arthur Road, the Blackwood River and the seasonal watercourses/drainage lines;
- Building exclusion areas to address matters such as land use compatibility, flood risk, and setbacks for on-site sewage disposal from the Blackwood River and seasonal watercourses;
- Future dwellings and buildings are to be located outside of the building exclusion areas along with addressing setback standards in LPS2;
- Provide for approximately 360 lots with any new lot to be least 2000m² in area. It is expected that a range of lot sizes will be provided based on market requirements and feasibility considerations; and
- Future dwellings can achieve BAL-29 or below.

The preparation and approval of a Local Structure Plan is a separate statutory process to the rezoning of the site. The Regulations outline the requirements and procedure for the preparation and approval of Structure Plans. The Local Structure Plan will be subject to community and stakeholder consultation.

4.4 Rational for Local Structure Plan Design

The Local Structure Plan (Attachment 8) responds to the site's context, opportunities and constraints, appropriate linkages to surrounding properties (Attachment 4) and the planning framework. It provides the framework for the Concept Subdivision Plan (Attachment 9). In particular, key planning and design considerations include:

- Taking account of site characteristics soil types and overall gentle to moderate gradients;
- Technical studies (Attachments 5, 6, 10 and 11);

- Considering key environmental assets and conserving the majority of the site's native vegetation;
- Taking account of State Planning Policy 3.7: Planning in Bushfire Prone Areas, the Guidelines for Planning in Bushfire Prone Areas and the Bushfire Management Plan including the provision of multiple access routes;
- Considering seasonal drainage lines and stormwater management. The road pattern is integrated with stormwater management;
- Larger lots on the boundaries of the site to address land use compatibility between off-site uses including the resource recovery facility to the northwest and with agricultural uses to the north and east along with the provision of smaller lots internally;
- Providing a range of lot sizes to enhance attractiveness to the market and to promote feasibility;
- Proposing no direct vehicle access between lots and Bode Street/Boyup Brook – Arthur Road;
- Appropriate access to Bode Street/Boyup Brook-Arthur Road to satisfy Shire requirements and provide suitable sight distances;
- Proposing an interconnected network of streets which facilitate safe, efficient and pleasant walking, cycling and driving;
- Road linkages to adjoining land;
- Only proposing through roads (there are no cul-de-sacs) and there are no battleaxe access legs (further detail in Attachment 9);
- Ensuring there are suitable areas, on each proposed lot, to locate a dwelling and outbuilding and also to appropriately dispose of sewage;
- Responding to the site's landform with no need for retaining walls on property boundaries; and
- Seeking to create regularly shaped lots with generous frontages, that generally orientate north-south or east-west to promote opportunities for passive solar building design.

The Local Structure Plan will adopt principles including connectivity, walkability, affordability and quality of life. The Local Structure Plan will integrate with surrounding uses and development. Future design should seek to promote the site's 'sense of place' and create a built form that is site responsive. To promote a sense of place, the following is proposed:

- Street trees likely to be suitable exotics that address Boyup Brook's climate, enhance amenity, and minimise increased bushfire risks;
- Entry statements onto new roads intersecting Bode Street/Boyup Brook – Arthur Road;
- Signage to meet Shire requirements; and
- Restrictive covenants.

The Local Structure Plan will provide for a range of lot sizes including those not currently available in Boyup Brook. The lot sizes will reflect Boyup Brook's nonmetropolitan lifestyle. The aim is to provide choice, to create an estate with its own identity and to enhance liveability in Boyup Brook.

4.5 Concept Subdivision Plan

Complementing the Local Structure Plan is a Concept Subdivision Plan (Attachment 9) which shows 360 lots. This plan was requested by the Shire given WAPC Structure Plan Guidelines do not show new lot boundaries on Structure Plans.

It is highlighted the Concept Subdivision Plan is indicative only, has no planning 'weight' and will be refined at the subdivision stage.

4.6 Future servicing and more detailed planning

Future lots and development will be appropriately serviced for low density residential and rural residential development in accordance with Shire, WAPC and other government agency requirements. This includes for on-site disposal, sewage stormwater management, underground power and telecommunication services. Further details are outlined in Attachment 10 and later sections of this report, with more detailed planning to occur at the subdivision, development application and building permit stages.

The future subdivision and development will consist of:

- Sealed roads;
- Reticulated scheme water;
- On-site sewage disposal;
- Enhanced stormwater management;
- Underground power;
- Telecommunication services;
- Upgraded fire management measures including fire hydrants;
- New and upgraded fencing; and
- Appropriate replanting.

Most lots will require no fill. There may be a need for modest fill, on some lots, to address the findings in the Wastewater Management assessment and in future Site and Soil Evaluations.

The Shire is continuing to work with the State Government regarding securing State Government investment to upgrade the scheme water supply in Boyup Brook. This includes to service planned development in the townsite along with servicing the Amendment site.

Securing additional sufficient scheme water and storage capacity for the Boyup Brook townsite, in a timely manner, is strategically important to the Shire, the local community and to the landowner. This will assist to support planned growth and development in Boyup Brook. Some of the benefits include:

- Supporting new development and housing. This includes making a significant contribution to providing lots and housing for Talison Lithium;
- Supporting the local and regional economy to complement the State Government's Just Transition Fund;
- Facilitating population growth, job creation and economic development along with assisting to create a more sustainable local economy and sustaining local facilities and services; and

 Assisting to 'rebrand' Boyup Brook through providing a different product including a range of lot sizes, lifestyle opportunities, affordability and housing choices to suit a wide range of people. This includes lot sizes not currently available in Boyup Brook.

Further details are outlined in later sections of this report.

4.7 Scheme provisions

The proposed residential and rural residential subdivision/development and land use will be controlled by existing and proposed LPS2 provisions plus provisions in the Local Structure Plan. The proposed scheme provisions will address subdivision, development and land use, servicing requirements, bushfire management and purchaser notification.

Photo 3: view of Blackwood River and future public open space

5. PLANNING CONSIDERATIONS AND PLANNING JUSTIFICATION

5.1 Overview

This section brings together an assessment of the site's attributes and the planning framework in considering key planning considerations and justifying the requested zoning for Lots 51, 1007 and 1118 Boyup Brook – Arthur Road, Boyup Brook from 'Rural' to 'Special Use (SU2)' zone.

5.2 Planning suitability for residential and rural residential development

The Local Structure Plan proposes predominantly Residential R5 (minimum lot size of 2000m²) plus rural residential lots, along with public open space land uses consistent with those proposed by the draft Local Planning Strategy.

As previously outlined, the Indicative Subdivision Concept Plan shows additional details and illustrates that approximately 360 residential and rural residential lots could be established on the site, with a minimum lot size of 2000m². There is additional land set aside for foreshore reserve and public open space/community purposes.

Lots adjoining Boyup Brook – Arthur Road and Bode Street will have a landscape buffer that will maintain the 'low key' rural feel for the area.

The site is suitable to be rezoned to Special Use (SU2) to facilitate residential and rural residential subdivision/development. The reasons include:

 It is consistent with the planning framework. Various planning policies and strategies support residential and rural residential subdivision adjoining or close proximity to existing towns. The site adjoins the Boyup Brook townsite and accordingly is near the town's associated educational, medical, community, recreational and retail services;

- It promotes and delivers on new investment and population growth which is consistent with the vision of the draft Local Planning Strategy and the Council's Strategic Community Plan;
- It will integrate with and complement the Boyup Brook townsite;
- The site provides a realistic opportunity to grow and complement the Boyup Brook townsite with lot sizes and pricing that are appropriate for a country town and market expectations;
- The site provides a suitable interface between the Boyup Brook townsite and rural residential development and agricultural areas;
- Development will be compatible with adjoining and surrounding land uses;
- Appropriate buffers can be provided to adjoining and nearby uses;
- Most the site has been previously cleared. Remaining environmental assets, focused on riparian vegetation and water resources, can be appropriately conserved;
- There are opportunities for revegetation/environmental repair;
- The technical investigations confirm subdivision/development will address on-site sewage disposal requirements and bushfire risks;
- It is overall moderately sloping land, with suitable soil types for development;
- It will be appropriately serviced in accordance with local government and State Government guidelines;
- Traffic impacts will be manageable, and traffic can readily be accommodated on Bode Street/Boyup Brook – Arthur Road as outlined in the Traffic Management Assessment;
- There is no direct access between lots and Bode Street/Boyup Brook – Arthur Road;
- The site is not located in a public drinking water source area;
- Bushfire management measures will comply with the objectives of State Planning Policy 3.7 Planning in Bushfire Prone Areas and the Guidelines for Planning in Bushfire Prone Areas. This

includes access routes in different directions;

- There will be manageable landscape impacts, when associated with the preparation and implementation of a landscape plan. The site's attributes, along with landscaping and design guidelines will create a unique 'sense of place';
- It assists to provide a variety of housing and lifestyle choices near Boyup Brook;
- It is near the town centre and there are opportunities for enhanced walking and cycling connections including along the Blackwood River and Ritson Street;
- There will be enhanced public access to the Blackwood River;
- The proposal will complement Boyup Brook increasing its overall viability, vitality and prosperity, increasing the economic viability of existing services and adding to the range of services that can be provided;
- Approval and implementation will assist to support the viability and sustainability of local services, facilities and businesses;
- It assists to 'rebrand' Boyup Brook through providing a different product including a range of lot sizes, lifestyle opportunities, affordability and housing choices to suit a wide range of people. This includes lot sizes not currently available in Boyup Brook;
- It provides families, empty nesters, first homebuyers and others wishing to relocate to Boyup Brook with greater spaciousness and lifestyle options;
- The site is attractively located on the Blackwood River and there are a range of views which will be attractive to the market;
- It provides community benefits including, if required by the Shire, ceding land adjoining the Blackwood River free-of-cost to the Crown. Securing public land adjacent to the Blackwood River offers conservation, recreation and accessibility opportunities to the community; and
- It will provide a new standard of subdivision in Boyup Brook.

Further details relating to the site's suitability for the residential and rural residential uses are outlined in this section and summarised in Table 2.

5.3 Range of lot sizes

It is acknowledged that the Local Planning Strategy identifies the site as a Planning Area 'Residential & Rural Residential'. Accordingly, the Local Structure Plan and the Concept Subdivision Plan propose lot sizes between 2000m² – 2 hectares. The reasons for the range of lots include:

- The requirement to provide reticulated water and address associated feasibility;
- To provide a range of lifestyle opportunities to meet anticipated market demand;
- Boyup Brook does not have many lots in the range of 2000m² to 1 hectare. These lots are generally favoured by the market for reasons including space for growing families, they are more manageable than lot sizes between 1 – 2 hectares and they are expected to be provided in a country town;
- It more efficiently uses land adjoining the Boyup Brook town site; and
- It follows technical investigations which reveal the need for different lot sizes over the site to address opportunities and constraints.

5.4 Consistency with planning framework

As outlined in Section 3 of this report, the Amendment is consistent with the State, regional and local planning framework. For instance:

- The Amendment will support implementing a sustainable use of the land consistent with the objectives of the State Planning Policy 3: Urban Growth and the draft Local Planning Strategy in terms of accommodating additional residential and rural residential development near an established district centre;
- The Amendment will facilitate development that meets the vision

outlined in the draft Local Planning Strategy. The subdivision/development will conserve local environmental assets character whilst providing and increased opportunities for new residents to experience a treechange lifestyle;

- The site is identified as a Planning Area 'Residential & Rural Residential' in the draft Local Planning Strategy. The intent of the Amendment is to implement the recommendations of the draft Local Planning Strategy by rezoning the site to 'Special Use (SU2)' under LPS2;
- The creation of residential and rural residential lots will facilitate increased population in close proximity to existing services and facilities provided in the Boyup Brook townsite. These include retail/commercial, services and health, education and recreational facilities. The additional population will assist in supporting and increasing the provision of such services and facilities in the district; and
- Key matters such as bushfire risks, stormwater management, traffic impact and on-site sewerage disposal are addressed in the technical investigations.

From a spatial perspective, the rezoning of the site will provide a logical extension to providing additional residential and rural residential lots near the Boyup Brook townsite without causing adverse amenity impacts to the locality. Attachment 4 shows the Context, Opportunities and Constraints Plan. The proposed Special Use (SU2) zone provides an appropriate transition use between the Boyup Brook townsite and rural residential areas and agricultural operations.

Development of the site will significantly assist to address the need for additional residential and rural residential land in Boyup Brook.

5.5 Compatibility with adjoining and nearby land uses

5.5.1 Overview

A key planning requirement is separating potentially conflicting land uses. The Amendment and supporting Local Structure Plan have considered the site's context, including adjoining and nearby land uses, and considered the future compatibility of subdivision/development.

The proposed residential and rural residential uses are compatible with adjoining and nearby land uses/development as outlined in Attachment 4. The reasons include:

- There is rural residential land to the south-west;
- It is consistent with community/public uses to the west including the cemetery and the resource recovery facility. If required, a notification on the title can be included on lots within the resource recovery facility buffer;
- Large lots and an appropriate buffer are provided to the farming land to the north and north-east;
- The draft Local Planning Strategy recognises the existing and proposed co-existence of multiple land uses nearby including residential, rural residential, industry and agriculture;
- Proposed revegetation will be undertaken adjoining the Bode Street/Boyup Brook - Arthur Road boundary including to the resource recovery facility. This will assist in conserving local amenity.

Environmental Protection Authority Guidance Statement No. 3 provides recommendations on separation distances for industrial and sensitive land uses.

5.5.2 Resource recovery facility

The Local Structure Plan provides appropriate buffers between proposed future dwellings and the resource recovery facility. The Shire's resource recovery facility is located on Reserve 15706 (No. 184 Bode Street). appropriate An separation distance will be provided between the resource recovery facility and new dwellings (sensitive uses) on the site. The EPA's Separation Distances between Industrial and Sensitive Land Uses (2005) outlines the buffer distance is determined 'case by case'. The Local Structure Plan shows a buffer of 200 metres with future dwellings to be appropriately setback which is achieved via rural residential lots and appropriately locating a building envelope. This is also shown on the Concept Subdivision Plan (Attachment 9). Planting on the site, near the resource recovery facility, will complement the native vegetation in the Unallocated Crown Land and assist to screen and lower impacts from the facility.

It is expected there will be a notification placed on the titles for lots within the resource recovery facility buffer.

5.5.3 Buffers to agricultural operations

It is recognised that there can be issues at the interface between agricultural and residential/rural residential development, including spraying, the use of machinery, or that farmers can be required to adopt different practices. While noting this, the Amendment and associated Local Structure Plan can minimise possible or perceived impacts of agricultural operations through appropriate buffers. This in part includes the provision of generous sized Rural Residential lots adjoining Bode Street/Boyup Brook -Arthur Road and to the north-east. The vegetated Bode Street/Boyup Brook -Arthur Road reserve will be complemented with proposed replanting to assist in screening and assisting to minimise potential impacts.

In order to ensure that appropriate setbacks to nearby agricultural land is undertaken, lots fronting Boyup Brook -Arthur Road will be at least 1 hectare in area. Dwellings are expected to be set back to agricultural land by approximately 100 metres - from the north side of Boyup Brook - Arthur Road to future dwellings.

Accordingly, future dwellings will not impact existing agricultural operations including for properties to the north of Boyup Brook – Arthur Road. This is complemented with proposed revegetation (indicatively 5m width) along with a vegetated road reserve to the north. There will also be a suitable buffer to off-site agricultural areas (grazing/cropping) through larger lots to the north-east and south-west.

It is proposed that notifications are placed on the titles which alert prospective purchasers that there are nearby farming operations.

While noting the above, farming operations also have a requirement to contain impacts on their own land and follow established best practice.

5.6 Bushfire management

A portion of the site is designated by the Fire and Emergency Services Commissioner as a 'Bushfire Prone Area' at https://maps.slip.wa.gov.au/landgate/bu shfireprone/. To address State Planning Policy 3.7 Planning in Bushfire Prone Areas and the Guidelines for Planning in Bushfire Prone Areas, Smith Consulting have assessed bushfire risks and have prepared a Bushfire Management Plan (Attachment 6).

As outlined in Attachment 6, the site is overall classified as having a moderate bushfire hazard level given the site is generally cleared, has low fuel levels, is well separated from vegetated areas and has moderate slopes.

Based on the Smith Consulting assessment, the Amendment and Local Structure Plan can meet the 'Acceptable Solutions' of each element of the bushfire mitigation measures as per the Guidelines for Planning in Bushfire Prone Areas. Accordingly, Smith based on the Consulting assessment, acceptable protection can be offered to future

residents from bushfire hazards within acceptable limits.

To address the Guidelines, there will be:

- The provision of multiple access routes via the public road network;
- A fire service access route is proposed adjacent to the Blackwood River. The proposed fire service access route will be 6m wide;
- Provision of a reticulated water supply and fire hydrants (for lots below 1 hectare); and
- The establishment of 20m Asset Protection Zones around future dwellings. This can be readily achieved, as part of detailed subdivision design, given the site is largely cleared and fuel levels are generally low;
- Boyup Brook is serviced by fire response units located in the Boyup Brook townsite which are close to the site. It is understood they have heavy duty and fast response vehicles that could readily service the site;
- A permeable road network is proposed with no cul-de-sacs;
- Advising prospective purchasers of bushfire risk, their obligations and relevant publications addressing bush fire safety; and
- For lots within the bushfire prone area, building construction and protection standards pursuant to the Building Code of Australia and if required to Australian Standard 3959-2009 Construction of Buildings in Bushfire Prone Areas.

There will be a need to prepare a Bushfire Management Plan to support a subdivision application(s) with associated BAL-Contour mapping. Future development can achieve a BAL rating between BAL – Low to BAL 29.

Additional more detailed bushfire investigations will occur at the subdivision, development and building permit stages.

5.7 Landscape enhancement

The site and area are characterised by a mix of land uses including agricultural, rural residential, tourism and community uses. Agricultural operations are primarily cropping and grazing. There is some native vegetation on the site which includes on rocky outcrops, along the seasonal watercourses and adjoining the Blackwood River.

The site's landscape, when viewed from Bode Street/Boyup Brook-Arthur Road, forms part of the 'gateway' into Boyup Brook. The site presents as an open cropping landscape which is complemented with areas of native vegetation.

The site is partially screened from Bode Street/Boyup Brook-Arthur Road by existing vegetation.

There is a need to retain the 'rural' character of the site adjoining Bode Street/Boyup Brook - Arthur Road.

The site will assist to accommodate a sizeable component of the future growth of Boyup Brook. As such, it is not intended that development be invisible, but development will be sensitively integrated with the landscape. The landscape impact of new development will be mitigated by measures including:

- Retaining existing native vegetation where possible;
- Revegetation will enhance the amenity of the site. Revegetation will be undertaken at the subdivision stage particularly adjoining Bode Street/Boyup Brook-Arthur Road, to provide a vegetated entrance into Boyup Brook;
- It is proposed to undertake planting with a depth of 5m adjoining Bode Street/Boyup Brook-Arthur Road. While details are proposed to be addressed as a subdivision condition. it is expected there will be a mix of trees and shrubs of different heights. The proposed planting, when combined with the existing

vegetation in the road reserves, will effectively filter future development when viewed from Bode Street/Boyup Brook-Arthur Road;

- The Amendment and resulting subdivision/development will have landscape manageable impacts given future lots will be spacious. Rural residential lots adjoining Bode Street/Boyup Brook - Arthur Road will be at least 1 hectare in area. Accordingly, there will be a sensitive interface between future development and Bode Street/Boyup Brook - Arthur Road;
- Future dwellings will have generous setbacks from Bode Street/Boyup Brook - Arthur Road of approximately 80 metres;
- LPS2 provisions will control new development including building materials and outbuildings;
- LPS2 provisions and the Residential Design Codes only permit only one house on each lot. This is considered appropriate in the context of spaciousness and minimising visual impact; and
- There are opportunities to establish restrictive covenants to control building design. This matter is further considered in section 5.13.

There is landowner support for a landscaping theme for the estate along with consideration of long term management of the vegetation.

The landowner supports planting suitable street trees along with planting near Bode Street/Boyup Brook-Arthur Road. At this early stage of the planning/design process, the preference is London Plane trees given they have lower bushfire risks than native trees. It is proposed to enhance the site through street trees in road reserves to enhance the area's amenity which is done in a way that does not impact BAL ratings. There will also be replanting on future lots.

It is considered that the above measures adequately serve to maintain the desired landscape character for the site and for Boyup Brook.

5.8 Environmental impact

5.8.1 Overview

Attachment 5 sets out the Local Water Management Strategy which provides high level environmental assessment and wastewater management assessment. Based on this assessment and the resulting design of the Local Structure Plan (Attachment 8), it is expected that the Amendment and associated subdivision/development will have negligible environmental impacts for reasons including:

- The site has been generally cleared. The remaining native vegetation can be conserved through larger lots containing important areas of native vegetation, building exclusion areas and carefully designing roads and locating development on cleared land;
- Most native vegetation is degraded due to past stocking. While noting this, there are opportunities for appropriate revegetation/landscaping on portions of the site including the seasonal watercourses, additional planting adjoining Bode Street and Boyup Brook-Arthur Road, in road reserves and planting undertaken by landowners;
- Key environmental assets, including water resources, can be suitably addressed through appropriate servicing, design and management;
- The site is not within a public drinking water source area;
- Groundwater is well below the natural ground level for most of the site (Attachment 5);
- Detailed design, at the subdivision and development stages, will address road design, lot layout and orientation, on-site stormwater management and ensure there is minimal disturbance of the topography;
- The site is not within the trigger distance area of SPP 5.4 Road and Rail Noise;
- There will be appropriate setbacks between future development areas

and Bode Street/Boyup Brook – Arthur Road to further reduce noise impacts;

- Site conditions are appropriate for onsite sewerage disposal (refer to Attachment 5);
- It will be appropriately serviced including that stormwater will be effectively managed in accordance with the Local Water Management Strategy (Attachment 8);
- The site is not classified as a contaminated site by the Department of Water and Environmental Regulation (DWER);
- There is low acid sulphate soil risk;
- The site adjoins the Boyup Brook townsite reducing the need for motorised transport and providing opportunities for cycling; and
- It will be subject to subdivision and development conditions.

There are no significant impediments to the future subdivision and development of this site as evidenced by the supporting technical investigations. Accordingly, it is suggested that subject to addressing subdivision and development conditions, future subdivision/development should result in minimal on-site or off-site environmental impacts.

5.8.2 Flora and fauna

The majority of the site has been cleared and used for cropping. Remaining native vegetation is focused in a few smaller sections of the site. It is proposed to incorporate these areas into public open space or larger lots.

It is proposed to limit clearing of native vegetation where possible and practical.

5.8.3 Flood risks

A small portion of the site, near the Blackwood River, is subject to flood risk. While there is no available flood mapping, a precautionary approach has been adopted based on DWER advice.

At the subdivision stage, the detailed design will provide either building envelopes or building exclusion areas. This will ensure that all lots have a suitably sized building envelope located outside of the 1 in 100 ARI floodplain. This is reflected in the provision of public open space and generous residential lots near the Blackwood River. Future buildings are required to be appropriately setback from the Blackwood River and seasonal watercourses. There is also a need for a minimum floor level of 190.5m AHD based on DWER advice.

5.8.4 Hydrology

The site adjoins the Blackwood River. There are three seasonal watercourses on the site which drain into the Blackwood River.

The site is not located within a Public Drinking Water Source Area.

5.8.5 Road noise

State Planning Policy 5.4 Road and Rail Noise (SPP 5.4) does not apply to the site with no part within the 'trigger distance'.

5.9 Land capability/geotechnical

The Local Structure Plan responds to the characteristics of the site and sets out a range of lot sizes and other design elements. In particular, larger lots are provided adjoining the Blackwood River and seasonal watercourses.

Bio Diverse Solutions have undertaken a land capability assessment which is provided in Attachment 5. In summary, the assessment reveals:

- There are three soil types which are all capable to accommodate residential development;
- Bio Diverse Solutions undertook 13 test holes throughout the site to a depth of 2 metres. Only 2 test holes encountered groundwater. Typically, the test holes revealed soils consisting of silty sand over deep sands or over sandy loam/sandy clay loam;
- There was no evidence of acid sulphate soils;
- The site is physically capable of residential subdivision/development. In particular, the site contains soils that are conducive for on-site sewage

disposal, stormwater management and building construction; and

• Bio Diverse Solutions conclude that the site is physically capable of unsewered residential and rural residential subdivision/development.

5.10 Movement Networks

5.10.1 Overview

Proposed roads are required to be designed and constructed to meet Shire requirements. Detailed design will occur at the subdivision stage and will be required address to topography, drainage, erosion and other requirements. In particular, all roads and intersections will be designed and constructed in accordance with the Austroads Design Guidelines to the Shire's satisfaction.

5.10.2 Roads

The Amendment site adjoins the sealed Bode Street and Boyup Brook - Arthur Road.

There is a high level of connectivity between the Amendment site and the Boyup Brook townsite which will ensure convenient vehicular and cycling access.

The Traffic Impact Assessment prepared by Donald Veal Consultants (Attachment 11) sets out that future subdivision to create 360 lots will not introduce any significant traffic or road safety issues.

The existing road network has sufficient capacity to address the additional traffic aeneration from the proposed subdivision/development. The subdivision/development will have manageable impacts on local roads, including on traffic flow. Additionally, there are appropriate vehicle sight distances at the intersections.

Anticipated traffic volumes from the development will not have a detrimental impact on the role or functioning of the existing road network.

The Structure Plan and associated Concept Subdivision Plan proposes:

- Three subdivision roads connecting with Bode Street/Boyup Brook-Arthur Road plus connections to properties to the south and east;
- Appropriate vehicular sight distances at the intersection of proposed access roads and Bode Street/Boyup Brook – Arthur Road which will facilitate safety for road users;
- No direct vehicular access between future lots and Bode Street/Boyup Brook-Arthur Road;
- Convenient vehicular access which will meet safety and amenity objectives;
- No cul-de-sacs; and
- Road reserves will be a width of 20 metres.

The Local Structure Plan and associated Concept Subdivision Plan outline a connected and legible system which is responsive to landform. It will spread the traffic load across a number of routes. As part of detailed design, the road alignment will seek to reflect site conditions and topography and aims to minimise road construction costs by considering drainage and earthworks. It is expected that the design will incorporate measures to create an appropriate speed throughout environment the development. This may in part include some round-a-bouts, median islands, change of road construction materials and the use of street trees.

The internal road network will be designed to meet the *Liveable Neighbourhoods* standards.

The alignment and orientation of roads will cater for stormwater management requirements as well as seeking to create where possible, lots orientated north-south or east-west to maximise solar access.

As outlined in the Traffic Impact Assessment, the intersection of Bode Street/Access Road 1 is unlikely to require auxiliary right turn lane treatment (when turning right from Bode Street into Access Road 1) as subdivision/development proceeds. At the subdivision stage, crossovers to be suitably located and designed.

5.10.3 Walking and cycling

The site's location and attributes provide opportunities for cycling and walking.

Walking and cycling will be promoted through the provision of low-speed roads to encourage convenient and safe pedestrian and cycling movement.

It is intended to provide opportunities for informal walking/cycling within generous sized road reserves (20 metres wide) with overall low traffic volumes. There will be opportunities for looped walking/cycling circuits.

At the subdivision stage, a dual use path may be constructed by the developer along Road 1 (west of Road 2) as set out in the Traffic Impact Assessment.

A pedestrian/cyclist link is proposed, intime, to be established between the site and the Boyup Brook townsite, via the trail to Skeleton Bridge with a connection to the site. There will also be a path near the adjoining Blackwood River the Amendment site. The link will be appropriately aligned minimise to clearing. It will be a valuable recreation resource for residents and visitors.

5.10.4 Connectivity to adjoining land

As outlined in earlier sections, the Local Structure Plan and Concept Subdivision Plan provide а high dearee of connectivity to adjoining land. The Local Structure Plan proposes various road connections to the east and south. These measures provide appropriate connectivity between future development on the site and surrounding areas.

5.11 Development setbacks and building exclusion areas

Most lots will rely on Scheme setbacks.

At the subdivision stage, it is expected there will be a need to set building envelopes for rural residential lots and establish building exclusion areas for lots containing flood impacted land. Additionally, wastewater exclusion areas may be required for lots to address setbacks from the Blackwood River and seasonal watercourses.

Building envelopes are generally not sought to be established unless practically justified to account for sewage disposal, visual buffering and associated requirements.

In most instances building setbacks will specifically relate to the *Residential Design* Codes for the R5 code, however where the physical site characteristics dictate Building Exclusion Areas will be established.

The key development setbacks are shown on the Local Structure Plan, in particular setbacks for lots near the resource recovery facility, near the Blackwood River and adjoining seasonal watercourses.

5.12 Services

5.12.1 Overview

The Servicing Report by Peter Eastlake Consulting Engineer is outlined in Attachment 10.

The site is capable of being serviced by all necessary utilities required for subdivision/development. Other than reticulated water, it is understood that capacity allowances have been made to provide services to the locality. There is a need for more detailed investigations and design to ensure there is capacity of these services for the subdivision/development. The capacity of infrastructure to service future subdivision will need to be determined prior to the issue of titles.

As outlined in section 4.6, the key service constraint for the Boyup Brook townsite and for the Amendment site is reticulated water.

Future subdivision will be appropriately serviced in accordance with Shire, WAPC and other government agency requirements. Future subdivision will require the extension and upgrading of essential civil infrastructure such as reticulated water and power.

Given the moderate slopes and generous lot sizes, it is expected that retaining walls on property boundaries can be avoided. There may be minor filling and retaining associated with the house and shed pads or in some instances, the land application area for on-site wastewater disposal. Houses should be suitably raised above the natural ground level.

5.12.2 Stormwater management

The site is located at the top of the catchment and it contains parts of separate smaller sub-catchments.

A Local Water Management Strategy (LWMS), see Attachment 5, has been prepared by Bio Diverse Solutions to support the Amendment and associated Local Structure Plan. The LWMS sets out:

- Groundwater and surface water considerations can be suitably addressed;
- Stormwater from future subdivision/development is required to be effectively managed and appropriately implemented. The details will be progressed through addressing subdivision conditions;
- The proposed lots are generous in size can accommodate stormwater drainage detention on-site;
- Future dwellings and sheds will require drainage to be contained on-site for rainfall events. relevant This is to occur through expected a combination of soakwells and rainwater tanks:
- Each lot is provided with a stormwater connection;
- It is proposed that there will be piped drainage in the road reserves which will be detained in basins; and
- To accommodate major events, the roads will be designed to safely convey runoff from large storm events (up to 1% AEP).

The LWMS outlines that stormwater can be appropriately managed to achieve the

water quality objectives outlined in State Planning Policy 2.9 Water Resources and associated guidelines Better Urban Water Management. In particular, there is a need to adopt a water sensitive design that seeks to retain, treat and use water, to minimise runoff and to promote at source infiltration.

Stormwater is required to be effectively designed, constructed and managed to the satisfaction of the Shire and DWER to meet publications such as State Planning Policy 2.9 Water Resources, Better Urban Water Management and Stormwater Management Manual for Western Australia. This will require a water sensitive design that seeks to detain, slow down and treat peak flows that especially addresses 'first flush' run off treatment. This includes that post development hydrology is required to be designed to be as close as possible to the pre-development hydrology.

The LWMS has informed the Local Structure Plan and the Concept Subdivision Plan, including proposed lot sizes.

Noting the proposed generous lot sizes, future subdivision/development will create manageable stormwater implications. There is also the opportunity to revegetate where appropriate.

Based on Attachment 5, it is suggested that stormwater can be effectively managed on the site. For instance, there are opportunities for infiltration on the site. Additional runoff generated by the development will be detained within the site and managed through the use of rainwater tanks, soak wells, vegetated swales and detention basins.

In addition to reticulated water supplies, onsite rainwater capture and storage is encouraged as a sustainability measure and will assist in stormwater attenuation.

A key matter for the detailed civil design stage is treating and controlling runoff from roads. The LWMS identifies that an Urban Water Management Plan (UWMP) is required as a condition of subdivision approval. The UWMP will need to address relevant matters to support detailed design. The UWMP:

- Is required to ensure that peak discharge from the subdivision/development does not exceed the pre-development levels;
- Will outline management arrangements to improve water quality leaving the site, as a result of the proposed development and the associated drainage strategy, compared to the current situation;
- Address the extent of localised flooding on the site and ensure that no development is located in flood impacted areas;
- Give appropriate consideration for 'wet' sections of the site and their future use and management and should development be proposed in these areas, this will need to appropriately address land capability and suitability, provide engineering designs/certification;
- Give careful consideration to the retention and future management of existing dams and unless required as part of an approved drainage system for on-site detention;
- Ensure that any dams not required for drainage purposes should be privately owned and managed with responsibilities known to all stakeholders 'up-front'; and
- Ensure that any new dams, relocating existing dams and generally altering watercourses will be determined in close association with DWER.

5.12.3 On-site sewage disposal

The Government Sewerage Policy outlines the general requirement to connect new subdivision and/or development to, or provide for, reticulated sewerage in accordance with the provisions of 5.1.1. Where provisions 5.1.1 do not apply, such as future subdivision and development proposed on this site, on-site sewage disposal may be considered where the responsible authority is satisfied that:

- Each lot is capable of accommodate on-site sewage disposal without endangering public health or the environment; and
- The minimum site requirements for onsite sewage disposal are met.

The site is remote from the reticulated sewerage network.

Reticulated sewerage is not available, feasible or necessary. Instead, future subdivision/development will be serviced by on-site sewerage disposal. As reflected in the draft *Local Planning Strategy*, connection to reticulated sewerage will not be required.

Given the proposed generous lot sizes, future subdivision/development will be serviced by on-site sewage disposal to comply with the Government Sewerage Policy.

Attachment 5 sets out the wastewater management assessment from Bio Diverse Solutions which addresses the Government Sewerage Policy for this stage of the planning process. The assessment demonstrates that the proposed residential and rural-residential uses and anticipated lot sizes are capable of accommodating on-site sewage disposal.

Bio Diverse Solutions note that:

- The site is considered to be suitable for receiving wastewater for onsite disposal using conventional wastewater systems for most of the property;
- Future lots will be generous in area which will provide space to accommodate and treat on-site sewage disposal (land application area);
- The site is not within a Public Drinking Water Source Area and is not classified as sewage sensitive;
- The minimum lot size for residential development is one dwelling per 2,000m²;
- There are three seasonal watercourses which traverse the site.

On-site sewage disposal systems within 100m of the seasonal watercourses are required to be secondary treatment systems;

- There is scope for on-site sewage disposal to be located around 50 metres or more from seasonal watercourses and 100 metres or more from the Blackwood River;
- Site conditions have appropriate capability for residential and rural residential subdivision/development; and
- There will be a further need to address on-site sewage and gain relevant approvals at the subdivision, development and building permit stages.

There may be a need to provide modest fill to accommodate a land application area for a small portion of the site. This is in order to ensure suitable clearances between the natural ground level and late winter ground water levels to accommodate on-site sewage disposal.

The Local Structure Plan supports on-site sewage disposal through generous lots sizes and appropriate setbacks from the Blackwood River and seasonal watercourses.

5.12.4 Water supply

Rural residential lots will be serviced with rainwater tanks that are a minimum of 92,000 litres.

Proposed lots below 1 hectare are required to be connected to the reticulated (scheme) water system based on WAPC requirements.

Water Corporation's reticulated water supply network is currently limited to the Boyup Brook townsite. There is a need to extend the network and also construct a high-level water tank to maintain minimum water pressure requirements.

Water Corporation is investigating options to increase water provision to Boyup Brook including to provide sufficient capacity to service the proposed subdivision/development on the Amendment site. It is expected there will be a need to create an elevated tank on the site.

At the subdivision stage, the developer's consulting engineer will again approach Water Corporation for information about system capacity and constraints and will conduct engineering investigations to determine the viability of water servicing, from both an engineering and cost perspective. The developer's consulting engineer is required to determine if the system pressure and tank elevation is sufficient to supply the proposed subdivision/development. Proposed lots are required to have sufficient pressure to Corporation's meet Water licence conditions and it's Customer Charter.

The subdivision will also be serviced by fire hydrants.

In addition to reticulated water, there are opportunities for additional water supply provision such as landowner's installing rainwater tanks which have sustainability and stormwater management benefits.

5.12.5 Power supply and telecommunications

All proposed lots will be serviced with underground power and required telecommunication infrastructure.

Subject to State Government policy and project feasibility, there may be scope for 'green' energy provision and/or battery storage. Alternatively, it is expected that the electrical network will be extended and designed to service future lots. The subdivision will be serviced with underground power. Transformer(s) will be suitably located and will distribute power to the lots by means of low voltage cabling and pillar units (green domes).

It should be noted that due to the dynamic nature of Western Power's network, infrastructure requirements and connection points referred to in the Engineering Servicing Report may differ when applications are placed in the future. It would be preferable that there is no street lighting but instead to promote 'dark sky' principles.

Based on Attachment 10, it is expected NBN will be provided by fixed wireless.

5.12.6 Gas

Reticulated gas is not available in this locality. If required, it will be provided by bottled gas.

5.13 Restrictive covenants

Restrictive covenants will be required to limit direct vehicular access between lots and Bode Street/Boyup Brook – Arthur Road.

It is expected that the developer will establish restrictive covenants prior to the issue of titles. The restrictive covenants will assist to promote suitable building design to maintain the area's amenity.

5.14 Land supply

There is a shortage of available and serviced residential and rural residential lots in Boyup Brook.

The planning framework supports the ongoing growth of Boyup Brook as a district centre. The site forms part of Boyup Brook's 'development footprint' as established by the planning framework including the draft Local Planning Strategy which identifies the site in a Planning Area of 'Residential & Rural Residential'.

The draft Local Planning Strategy sets out a need to provide additional residential and rural residential land in Boyup Brook. The Amendment site will provide an important supply of lots in Boyup Brook. The site provides an opportunity for a wide range of lot sizes and housing choices.

5.15 Foreshore reserve and public open space

A foreshore reserve of approximately 5.2 hectares will be provided along with a centrally located area of public open space/community purpose site of approximately 2 hectares.

The foreshore will have recreation 'nodes' along with a continuous reserve adjoining the Blackwood River for the site's entire frontage.

The proposed Scheme provisions set out the need for appropriate management of the foreshore. The foreshore reserve will be ceded free of cost by the subdivider.

The subdivider will be responsible for defining, likely through suitable fencing (that does not impede flood waters) the boundary between freehold lots and the foreshore reserve. The Concept Subdivision Plan shows indicative pedestrian accessways to the foreshore.

There is a need to work through matters including weed control, revegetation and restricting vehicular access to the foreshore (other than a Fire Service Access Route and to designated public carparks).

Most proposed lots are within 400 metres of future POS (centrally located or on the foreshore). A range of recreational facilities are nearby in Boyup Brook.

It is noted the generous lot sizes (minimum lot size of 2000m² to 2 hectares) also provide opportunities for on-site recreation.

There will be cycling paths linking the site to the Boyup Brook townsite via Ritson Street and along the former railway line.

The Local Structure Plan provides for convenient cyclist and pedestrian links throughout the site. It is intended to provide opportunities for informal walking/cycling within generous sized road reserves (20 metres wide) with overall low traffic volumes. There will be opportunities for looped walking/cycling circuits.

5.16 Staging

A staged development will occur. The first stage is expected to be the northern

section given this reduces upfront servicing costs due to proximity to services.

The staging will be dependant on a number of factors including presales/demand, feasibility, detailed servicing considerations and ensuring there is two-way vehicular access to address State Planning Policy 3.7 Planning in Bushfire Prone Areas.

5.17 Supporting the local economy and community

Approval and implementation of the Amendment will have various economic and community benefits including:

- Supporting local employment through the construction of subdivision works and new dwellings;
- Supporting existing or additional local services and community infrastructure;
- Assisting in a more sustainable local economy;
- Increasing population in Boyup Brook which assists in its overall viability, vitality and prosperity;
- Building onto an existing community with established facilities, services and infrastructure and assist to strengthen and sustain Boyup Brook;
- Providing a greater choice for those wishing to buy lots in Boyup Brook in an attractive locality close to the townsite; and
- Broadening the Shire's economic base to assist with increasing local resilience.

The Amendment is consistent with the planning framework which promotes employment and economic growth in Boyup Brook.

Photo 4: Southern location
5.18 Planning justification

The planning justification for the Amendment is summarised in Table 2. Given the below, the Amendment and associated Local Structure Plan are considered consistent with the planning framework and the principles of orderly and proper planning.

Table 2 – Summarised F	Planning Justification			
Strategic	Land Use Planning	Environment and Landscape	Transport and Servicing	Economic and Community
 The Amenament is consistent with the planning framework. The site adjoins the Boyup Brook townsite which will reinforce Boyup Brook as a district centre. The site is well located for residential and rural residential and rural residential uses including it is compatible with adjoining and nearby uses. The proposed Special Use zone, between the townsite and rural uses, represents orderly and proper planning. It assists to meet the demand for residential and rural residential and rural residential and rural uses, represents orderly and proper planning. It assists to meet the demand for residential and rural residential and rural residential development in Boyup Brook in a planned, orderly and sustainable manner. It will provide opportunities for a significant supply of land offering a range of lifestyle choices close to the Boyup Brook townsite. The proposal will provide a new form of lot sizes and lifestyle opportunities in Boyup Brook. 	The site is suitable and capable of residential and rural residential uses. Development will be effectively controlled through LPS2 provisions. The Local Structure Plan provides a co-ordinated approach to future subdivision/ development. The site is well located for the proposed land uses. There are appropriate buffers and mitigation measures to the resource recovery facility and to farming operations. Aboriginal heritage constraints are acknowledged and will be reviewed in greater detail at the subdivision stage.	Ine majority of the site has been previously cleared. Remaining environmental assets, in particular native vegetation, can be appropriately conserved and there are opportunities for environmental repair/replanting. Subject to suitably addressing stormwater management, future development is unlikely to create any adverse environmental impacts. Bushfire management measures will comply with the objectives of SPP 3.7 and the <i>Guidelines for</i> <i>Planning in Bushfire Prone</i> <i>Areas</i> . The site is not located in a public drinking water source area. There are manageable landscape impacts when viewed from Bode Street/ Boyup Brook- Arthur Road and opportunities to enhance the site's appearance including through replanting.	Ine site has excellent road connectivity and easy access to Boyup Brook and other areas. Traffic impacts can be readily accommodated on Bode Street/Boyup Brook - Arthur Road. Safe vehicular access can be achieved between the site and Bode Street/Boyup Brook - Arthur Road. There is no direct access between lots and Bode Street/Boyup Brook - Arthur Road. The Local Structure Plan facilitates opportunities for cycling and walking. The subdivision/ development will be appropriately serviced. On-site sewage disposal and stormwater management can be appropriately located and designed to the satisfaction of the WAPC, Shire and relevant agencies. The site is suitable and capable for the intended use including achieving realistic building, effluent disposal and stormwater outcomes.	It will promote job creation by supporting the development of Boyup Brook and assist to diversify and grow the local economy. This includes adding to its overall viability, vitality and prosperity and adding to the range of services that can be provided. Approval and implementation of the application will assist to increase population in Boyup Brook and in- turn support economic activity and support local services. The site is close to the Boyup Brook townsite and will complement Boyup Brook and supporting businesses, facilities and services.

6. CONCLUSION

This report confirms that the Amendment is consistent with the planning framework and that the site is both suitable and capable of accommodating residential and rural residential subdivision/development.

Amendment will facilitate The the development of the site into generous sized lots that will complement the Boyup Brook townsite. The preceding sections examined various planning have principles, statutory and policy considerations, environmental and servicing matters regarding the proposed rezoning.

The Amendment will establish the appropriate zoning for the site and future subdivision/development will be guided by the Local Structure Plan. Existing and proposed LPS2 provisions will ensure that subdivision and development will be effectively controlled.

The support of the WAPC and the Hon. Minister for Planning is requested to approve the Amendment to rezone the site from 'Rural' to 'Special Use (SU2)'.

PLANNING AND DEVELOPMENT ACT 2005

SHIRE OF BOYUP BROOK

LOCAL PLANNING SCHEME No. 2

AMENDMENT No. 24

The Shire of Boyup Brook under and by virtue of the powers conferred upon it in that behalf by the *Planning and Development Act 2005* hereby amends the above Local Planning Scheme by:

- 1. Rezoning Lots 51, 1007 and 1118 Boyup Brook Arthur Road, Boyup Brook from the 'Rural' zone to the 'Special Use (SU2)' zone.
- 2. Inserting provisions in Table 5 Special Use Zones in Scheme Area:

No.	Description of land	Special use	Conditions
SU2	Lots 51, 1007 and 1118 Boyup Brook – Arthur Road, Boyup Brook	A future residential estate, contemplating both residential and rural residential zones, where the mix of lots is to be addressed via a structure plan. Permissibility: Uses permitted within the areas designated as 'Residential' are as per the Zoning Table. Uses permitted within the areas designated as 'Rural Residential' are: Ancillary Dwelling 'P' Art Gallery 'D' Bed & Breakfast 'D' Dams 'D' Community Purpose 'D' Family Day Care 'A' Holiday House 'D' Holiday Accommodation 'A' Home Business 'D' Home Office 'P' Home Office 'P' Home Store 'D' Industry – Cottage 'D' Recreation – Private 'A' Repurposed Dwelling 'D' Residential Building 'A' Rural Home Business 'A' Second Hand Dwelling 'D' Single House 'P' Telecommunications Infrastructure 'D' Wayside Stall 'D'	 General application The conditions in this schedule apply to SU2 in addition to all other relevant provisions in the Scheme. If there is a conflict between any other provision in the Scheme, this Schedule prevails. Structure Plan Prior to subdivision and development, a structure plan is to be prepared and endorsed by the WAPC. Proposed future zones and reserves in the structure plan are to accord with the zones and reserves of the Scheme. In addition to the matters required in clause 16 of the deemed provisions, the structure plan is to address: a. Servicing arrangements, including Arrangements for an electricity supply; Provision of a licensed water supply for lots designated for residential purposes; or If a licensed water supply is not to be provided, lots are to be designated as rural residential with a minimum lot size of 1 ha; V. Drainage and water management as per a Local Water Management strategy. Access and egress for bushfire safety, in accordance with State Policy. Foreshore management, including: Allocation and design of Foreshore reserves and areas of public open space;
L			

No.	Description of land	Special use	Conditions
		All other uses are 'X' prohibited.	 d. Traffic Impact Assessment, including potential upgrades to existing roads and intersections servicing the proposed estate. e. A movement network that provides suitable transport options for vehicle, bicycles and pedestrians.
			Subdivision
			 Subdivision 6. Future subdivision shall generally be in accordance with a Structure Plan endorsed by the WAPC. 7. Aboriginal heritage protection as per an ethnographic and archaeological survey by a qualified consultant. 8. Based on site conditions, at subdivision stage, the Commission may impose added conditions relating to: (d) Revegetation and landscape planning addressing: i. buffer strip planting adjoining Boyup Brook – Arthur Road and surrounding rural use land. ii. ongoing separation of lots to remaining rural use land within the structure plan area to be staged as applicable. iii. protection of high value native vegetation to maintain rural landscape character. (e) Restrictive covenants for prevention of direct vehicular access between lots and Boyup Brook – Arthur Road. (f) Notifications on Title relating to: i. nuisance impact to residential amenity from adjacent rural operations; or ii. the Shire's resource recovery centre.
			Note: Structure plan areas are to be zoned progressively, as land is subdivided, and when opportunities arise for scheme amendments.

9. Amending the Scheme Map accordingly.

Determines Amendment No. 24 is a standard amendment under the provisions of the *Planning and Development (Local Planning Schemes) Regulations 2015* for the following reasons:

- An amendment relating to a zone that is consistent with the objectives in the scheme for that zone;
- The amendment is consistent with the draft Local Planning Strategy;
- The amendment would have minimal impact on land in the scheme area that is not the subject of the amendment; and
- The amendment does not result in any significant environmental, social, economic or governance impacts on land in the scheme area.

1 Introduction

1.1 Background

Lots 51, 1007 and 1118 Boyup Brook-Arthur Road Local Water Management Strategy (LWMS) has been prepared by Bio Diverse Solutions on behalf of Leafield Pty Ltd ('The Client') in support of a Rezoning Application prepared for the site.

The LWMS provides the framework for the application of total water cycle management to the proposed urban structure. This is consistent with the Department of Water and Environmental Regulation (DWER) principles of Water Sensitive Urban Design (WSUD) described in the Stormwater Management Manual (DoW, 2007).

1.2 Key Design Principles and Objectives

The LWMS employs the following key documents to define its content, key principles and objectives:

- Stormwater Management Manual for Western Australia (DoW, 2007).
- Better Urban Water Management (WAPC, 2008).

A summary of the key design principles and objectives from these documents is summarised below and provided in Table 1.

1.2.1 Stormwater Management Manual (DoW 2007)

The Department of Water (DoW) (now Department of Water and Environmental Regulation (DWER)) released *A Manual for Managing Urban Stormwater Quality in Western Australia* in 1998. The manual defines and practically describes Best Management Practices (BMP's) to reduce pollutant and nutrient inputs to stormwater drainage systems. The Manual also aims to provide guidelines for the incorporation of water sensitive design principles into urban planning and design, which would enable the achievement of improved water quality from urban development.

The document was released to provide a guideline for best planning and management practices and was intended for use by the DoW (now DWER), but also by other State and Local Government Authorities and sectors of the urban development industry.

DoW completed a major review of the manual in consultation with a working team comprising industry and government representatives. The revised manual was officially launched in August 2007.

DWER's current position on urban stormwater management in Western Australia is outlined in Chapter 2: *Understanding the Context of the Stormwater Management Manual for Western Australia* (DoW, 2007), which details the management objectives, principles and a stormwater delivery approach for WA. Principle objectives for managing urban water in WA are stated as:

- Water Quality: To maintain or improve the surface and groundwater quality within development areas relative to pre-development conditions.
- Water Quantity: To maintain the total water cycle balance within development areas relative to the predevelopment conditions.
- Water Conservation: To maximise the reuse of stormwater.
- Ecosystem Health: To retain natural drainage systems and protect ecosystem health.
- Economic Viability: To implement stormwater systems that are economically viable in the long-term.
- Public Health: To minimise public risk, including risk of injury or loss of life to the community.

- Protection of Property: To protect the built environment from flooding and water logging.
- Social Values: To ensure that social aesthetic and cultural values are recognised and maintained when managing stormwater.
- Development: To ensure the delivery of best practice stormwater management through planning and development of high-quality developed areas in accordance with sustainability and precautionary principles.

1.2.2 Better Urban Water Management (WAPC, 2008)

The guideline document Better Urban Water Management (WAPC, 2008), focuses on the process of integration between land use and water planning. The document specifies the level of investigation and documentation required at various decision points in the planning process, rather than the provision of any specific design objectives and criteria for urban water management.

This LWMS complies with the BUWM process.

Table 1: Summary of design principles and objectives

Key Guiding Principles				
 Facilitate implementation of sustainable best practice urban water management. Provide integration with planning processes and clarity for agencies involved with implementation. To minimise public risk, including risk of injury or loss of life. Protection of infrastructure and assets from flooding and inundation. Encourage environmentally responsible development. Facilitate adaptive management responses to the monitored outcomes of development. 				
Category Key Design Principles & Objectives LWMS Criteria				
Surface Water Management Groundwater Management	 Minimise changes in hydrology to prevent impacts on receiving environments. Manage water flows from major events to protect infrastructure and assets. Apply the principles of WSUD. Adopt nutrient load reduction design objectives for stormwater runoff. Floodplain management and urban drainage. Adopt treatment train approach. Manage groundwater levels to protect infrastructure and assets. 	 Post-development critical peak flows will be consistent with pre- development peak flow at the discharge point of each catchment within the Subject Site up to the 20% AEP. First 15mm of rainfall from storm events will be treated at source where possible. Drain re-alignment or profile modification may be carried out if the pre-development hydraulic capacity has been maintained. Manage surface water flows from major events to protect infrastructure and assets from flooding and inundation. Managing and minimising changes in groundwater levels and groundwater quality following development. 		
	 Maintain groundwater regimes for the protection of groundwater-dependent ecosystems. Protect the value of groundwater resources. Adopt nutrient load reduction design objectives for discharges to groundwater. 			
Monitoring and Implementation	 Adopt an adaptive management approach. Maintain drainage and treatment structures. 	 Design based on methodology in Stormwater Management Manual of adopting a treatment train including: structural treatment measures (infiltration storages, plus bioretention treatment structures). Non-structural measures to reduce applied nutrient loads. Maintain groundwater quality at pre-development levels (median winter concentrations) and, if possible, improve the quality of water leaving the development area to maintain and restore ecological systems. 		
Water Conservation	 Adopt drinking water consumption target. Ensure that non-potable water supply systems deliver a net benefit to the community. Ensure that non-potable water supply systems are designed as part of an integrated water supply. 	 Aim to achieve the State Water Plan target for water use and reduce water use where possible. Consider alternative fit for purpose water sources where appropriate and cost-effective. 		

1.3 Suitable Qualified Hydrologist

This LWMS has been prepared by Chiquita Cramer, who has 12 years of experience working as a hydrologist and hydrogeologist.

Chiquita Cramer currently has the following tertiary qualifications:

- Bachelor of Science in Natural Resource Management (University of Western Australia); and
- Graduate Certificate in Hydrogeology (University of Western Australia).

Chiquita completed a Bachelor of Science in Natural Resource Management in 2008 at the University of Western Australia. She then went on to work as a hydrologist and senior hydrologist at JDA Consultant Hydrologists in Perth where she worked for 8 years. Chiquita's experience includes preparation of multiple local and urban water management strategies, hydrological and hydraulic investigations, surface water and groundwater monitoring reports and hydrogeological reports. Chiquita furthered her studies in 2012 by completing a Graduate Certificate in Hydrogeology and in 2017 she joined Bio Diverse Solutions to provide expertise in hydrology and hydrogeology to the company.

1.4 Location

Lots 51, 1007 and 1118 Boyup Brook-Arthur Road (herein referred to as the Subject Site) comprises of approximately 221.8ha and is located approximately 2.5km northeast of the Boyup Brook town centre. The Subject Site is bound by Boyup Brook-Arthur River Road to the north, the Blackwood River to the east and southeast and adjoins cleared agricultural land to the east, west and southwest. The location of the Subject Site is shown on Figure 1.

Figure 1: Location Plan

2 Proposed Development

The Subject Site is situated within the Shire of Boyup Brook and zoned *Rural* under the Shire of Boyup Brook Local Planning Scheme No. 2. It is proposed to rezone the Subject Site from *Rural* to *Special Rural* to allow for rural residential lots ranging in size from 2,000m² upwards. A plan showing the main internal road network for the proposed development subsequent to the rezoning is shown on Figure 2.

Figure 2: Subdivision Concept Plan

Key elements of the Rezoning Application relating to Urban Water Management include:

- Use of bio-retention treatment systems for detention and treatment of stormwater runoff from internal roads;
- Utilise the Blackwood River for detention and conveyance of stormwater from larger storm events for flood mitigation;
- Building finished levels will be a minimum 500 mm above 100yr ARI top water levels in stormwater storage areas;
- Promotion of the use of local native plants for gardens, streetscaping and river foreshore. Any nonlocal species will be selected for drought tolerance and low fertiliser requirements; and
- Use of the Blackwood River foreshore area for water quality treatment and flood attenuation.

3 Pre-development Environment

3.1 Existing Land Use

The site currently consists of agricultural land used for mixed cropping and livestock. There is one dwelling located in the northwest of the site, which consists of a house and several machinery sheds. The eastern and south-eastern boundary of the Subject Site fronts the Blackwood River, which is the largest river in the southwest extending from the township of Wagin through the southwest to Augusta.

3.2 Topography

The Subject Site generally slopes from northwest to southeast towards the Blackwood River, from a high point of 255m AHD in the central portion of the site to 180m AHD along the Blackwood River foreshore in the southeast and east of the site. A smaller northern portion of the site slopes down towards the Boyup Brook-Arthur Road which lies at approximately 225m AHD. Topographic contours (5 metre contours) for the Subject Site are shown on Figure 3.

Figure 3: Topography

3.3 Climate

The Boyup Brook area is characterised by a Mediterranean climate with warm dry summers and cool wet winters. Rainfall data is from the nearby Bureau of Meteorology (BoM, 2021) Boyup Brook Station (Site No. 9504).

The long-term average annual rainfall is 646 mm (1914 to 2020). This average has decreased between 2000 to present, to an average annual rainfall of 542mm, reflecting a 16% reduction compared to the long-term average, consistent with a general trend in the South West of WA.

The total rainfall distribution has also altered, with a reduction of average winter monthly rainfall, but no significant reduction in average summer monthly rainfall.

The average annual pan evaporation for the Boyup Brook area is approximately 1399 mm (Luke et al 1988).

3.4 Remnant Vegetation

The Subject Site predominantly consists of cleared agricultural land with scattered paddock trees, and small patches/strips of remnant vegetation along the river foreshore.

The Subject Site lies within the JF02 – Jarrah Forrest Interim Bio-geographic Regional Area (IBRA).

The vegetation has been mapped on a broad scale by J.S. Beard (Shepherd et al 2002) in the 1970's, where a system was devised for state-wide mapping and vegetation classification based on geographic, geological, soil, climate structure, life form and vegetation characteristics. A GIS search of J.S. Beards vegetation classification places the Subject Site within one System and Vegetation Association (DPIRD, 2017a):

- System Association Name: Bridgetown.
- Vegetation Association Number: 992 & 3.
- Vegetation Description: Mainly jarrah and marri Eucalyptus marginata, Corymbia calophylla.

There are no Conservation Parks or Class "A" Reserves within the Subject Site or within the vicinity of the Subject Site.

3.5 Acid Sulphate Soils

Acid sulphate soils (ASS) are naturally occurring soils and sediments containing sulphide minerals, predominantly pyrite (an iron sulphide). When undisturbed below the water table, these soils are benign and not acidic (potential acid sulphate soils). However, if the soils are drained, excavated or exposed by lowering of the water table, the sulphides will react with oxygen to form sulphuric acid. Acid Sulphate Soil (ASS) Risk Mapping indicates the Subject Site does not sit within any known areas of ASS (DWER, 2017).

3.6 Geology and Soils

Database searches show the Subject Site lies within the Boyup Brook Valleys System (253Bv). The system is described as; "Valleys, in the south of the Eastern Darling Range (Blackwood Catchment). Gravel, sandy duplex loamy duplex. Jarrah-marri-wandoo forest and woodland." (DPIRD, 2017b).

A site soil investigation was conducted on the 3rd August 2021 by Bio Diverse Solutions. The site investigation included the construction of 13 test holes to a depth of up to 2 metres, logging of soils to the depth of the hole and inspection and measuring of the water table.

The test holes were constructed using a 65mm diameter hand auger and were left open for 1hr for inspections of water table depth. The location of the 13 test holes is shown on Figure 4.

Figure 4: Soil testing and mapping

The 13 test holes revealed that soils across the site comprised of three soil types:

- Silty sand topsoil over deep sands, no groundwater encountered to 2 metres (found along the river foreshore);
- Silty sand over moderately to poorly sorted sandy loam and sandy clay loam with low plasticity and no groundwater encountered to 2 metres (found in the higher elevations in the north east of site); and
- Silty sand over clay with high plasticity, a perched water table and scattered granite rock outcrops throughout (found in the west and central portion of the site).

The estimated boundaries of the three soil types are shown on Figure 4 with the soil testing results presented in Table 2.

Table 2: Soil Testing Results

Test Hole	Depth	Soil Type	Soil Description
TP1	0-150mm 150-1000mm 1000-1300mm 1300-1500mm 1500mm +	Sand with silt Sand with silt Sandy clay Sand with silt Bedrock	 Grey, fine, roots and root fibres (Topsoil), moist. Dark grey, medium, well sorted, saturated. Low plasticity, dark grey, medium grained sand, saturated. Orange, fine, well sorted, saturated. Refusal, granite rock. Water table was encountered 0.3m BGL.
TP2	0-150mm 150-500mm 500-800mm 800mm+	Sand with silt Sandy loam Sandy loam Clay	Grey, fine, roots and root fibres (topsoil), moist. Dark brown, medium, well sorted, moist. Brown, medium, well sorted, saturated. High plasticity, orange brown mottled, saturated. Water table was encountered 0.17m BGL.
TP3	0-150mm 150-500mm 500mm+	Sand with silt Sandy loam Clay	Grey, fine, roots and root fibres (topsoil), moist. Brown, medium, well sorted, moist. High plasticity, red/orange, moist. Water table was encountered 0.5m BGL.
TP4	0-300mm 300-1800mm	Sand with silt Sand with silt	Grey, fine, roots and root fibres (topsoil), moist. Brown/orange, fine, well sorted, moist-saturated. Water table was encountered 0.65m BGL.
TP5	0-300mm 300-1500mm	Sand with silt Gravelly clay	Grey, fine, roots and root fibres (topsoil), moist. Low plasticity, cemented layer, red/brown, coarse gravel, moist. No water table was encountered.
TP6	0-300mm 300-2000mm	Sand Sand	Dark brown, fine, well sorted, roots and root fibres (topsoil), dry. Yellow, fine, well sorted, dry. No water table was encountered.
TP7	0-300mm 300-2000mm	Sand Sand	Brown, fine, well sorted, roots and root fibres (topsoil), dry. Brown-yellow, fine, well sorted, dry. No water table was encountered.
TP8	0-150mm 150-300mm 300-800mm 800-1500mm	Sand with silt Sandy loam Sandy clay Sandy loam	Grey, fine, roots and root fibres (topsoil), moist. Orange/brown, fine, well sorted, moist. Low plasticity, yellow/brown, medium sand, moist. Yellow/brown, medium, well sorted, moist. No water table was encountered.
TP9	0-150mm 150-300mm 300-800mm 800-1500mm	Sand with silt Sandy loam Sandy clay loam Sandy clay	Grey, fine, roots and root fibres (topsoil), moist. Dark brown, fine, well sorted, moist. Orange/brown, medium, poorly sorted, moist. Low plasticity, orange, medium-coarse sand, moist. No water table was encountered.
TP10	0-150mm 150-300mm 300-700mm 700-1300mm	Sand with silt Sandy loam Sandy clay loam Sandy clay loam with gravel Gravelly clay	Grey, fine, roots and root fibres (topsoil), moist. Dark brown, fine, moderately sorted, moist. Dark brown, fine-coarse, moderately sorted, moist. Red-brown, fine-coarse, poorly sorted, moist. Low plasticity, orange/red, moist. No water table was encountered.

Table 2 continued.

Test Hole	Depth	Soil Type	Soil Description
TP11	0-150mm	Sand with silt	Grey, fine, roots and root fibres (topsoil), moist.
	150-300mm	Sandy loam	Dark brown, fine, moderately sorted, moist.
	300-700mm	Sandy loam	Orange/brown, fine-coarse, poorly sorted, moist.
	700-1500mm	Sandy clay loam	Orange, fine-coarse, poorly sorted, moist.
			No water table was encountered.
TP12	0-150mm	Sand with silt	Grey, fine, roots and root fibres (topsoil), moist.
	150-300mm	Sandy loam	Dark brown, fine, well sorted, moist.
	300-600mm	Sandy clay loam	Dark brown, fine, moderately sorted, moist.
	600-1500mm	Sandy clay	Low plasticity, orange/brow, moist.
			No water table was encountered.
TP13	0-150mm	Sand with silt	Grey, fine, roots and root fibres (topsoil), moist.
	150-600mm	Sandy clay	Moderate plasticity, black, moist.
	600mm+	Clay	High plasticity, orange, moist.
			No water table was encountered.

Phosphorous Retention Index

Phosphorous retention Index (PRI) is the ability of soils to absorb nutrients and heavy metals within the soil (i.e. Soil microbe disinfecting ability). Soils with a PRI less than 1 have a very poor ability to retain nutrients and heavy metals, whilst soils with a PRI of >5 having a high ability to retain nutrients and heavy metals. PRI testing was conducted on samples from soil testing hole TP1, TP4, TP6, TP8 and TP11 by CSBP Soil Laboratories. PRI results are presented in Table 3.

Soil Testing Hole Depth (mm) PRI TP1 150-1000 27.2 TP4 300-1800 5.9 TP6 300-2000 3.6 TP8 800-1500 79.0 **TP11** 700-1500 129.7

Table 3: Phosphorus Retention Index

The test results indicate that the site soils have a moderate to very high ability of fixing nutrients and heavy metals consistent with soil types found across the site. As expected, the lowest PRI was found in TP4 and TP6 in the south of the site in the deep sands, however it is noted that PRI here was still found to be moderate. Higher PRI was found in the clays and loams across the site, with the highest found in TP11 in the northeast of the site.

3.7 Surface Water Hydrology

There are no major drainage networks or water bodies within the Subject Site. Surface water generally runs off the site in a south easterly direction towards the Blackwood River. The Blackwood River is the largest river in the south west of Western Australia with a catchment area of 28,100 km². The river begins near the township of Wagin and flows through many small towns in the southwest prior to discharging to the coast line near Augusta.

There are three seasonal creek lines located across the site that flow in a south easterly and easterly direction towards the Blackwood River. A relatively smaller portion of the site in the north drains in a northerly direction towards Boyup Brook-Arthur Road and in an easterly direction towards an adjacent agricultural property which ultimately drains to the Blackwood River.

The pre-development surface water hydrology of the site and surrounding areas is shown on Figure 5. The general surface water hydrology of the site will be maintained post-development.

Figure 5: Pre-development Surface Water Hydrology

A hydrological investigation across the site was conducted on the 3rd August 2021 to confirm the surface water hydrology of the site and guide the development to establish a post development surface water management strategy. Rainfall prior to the site investigation was significantly higher than average for the months of February – July 2021. Findings of the site assessment are presented in Sections 3.7.1 and 3.7.2.

3.7.1 Seasonal Creek Lines

The presence of three seasonal creek lines were confirmed across the site, all discharging to the Blackwood River. The Western and Eastern Creeks at the time of the investigation had a trickle flow of water discharging to the Blackwood River. The Central Creek was not flowing; however, it did have standing water within its lower reaches. Photographs of the seasonal creek lines are shown in Photographs 1 to 6.

Lots 51, 1007,1118 Boyup Brook-Arthur Rd LWMS

Photo 1: A dam located in the upper reaches of the western creek line which provided a trickle flow of water to the lower reaches of the creek during the site investigation.

Photo 2: The lower reaches of the western creek, with trickle flow to neighboring property to the south and ultimately the Blackwood River.

Photo 3: Upper reaches of the central creek, not flowing at the time of site investigation.

Photo 4: The lower reaches of the central creek, with standing water adjacent to the Blackwood River.

Photo 5: View upstream of eastern creek line, with trickle flow towards the Blackwood River.

Photo 6: The lower reaches of the eastern creek line, characterized by deep eroded creek banks and trickle flow towards Blackwood River.

Creek	Temperature (°C)	рН	Electrical Conductivity (mS/cm)	Dissolved Oxygen (mg/L)	Total Dissolved Solids (g/L)
Western Creek	10.74	7.99	1.95	11.40	1.25
Central Creek	13.73	6.54	2.36	5.31	1.51
Eastern Creek	11.02	7.54	1.61	10.90	1.25

Table 4: Water quality of seasonal creeks

Water quality testing results found that the surface water within the creeks was slightly saline with a neutral pH. The dissolved oxygen was consistent with fresh flowing water in the western and eastern creeks, however was found to be significantly lower in the central creek where the water was more stagnant in nature and likely to consist of a higher level of sediment and decaying organic matter.

The surface water quality found in the creeks coming from the Subject Site shall be maintained or improved in the post-development scenario.

3.7.2 Blackwood River

Flood levels in the Blackwood River during the site investigation were higher than at the same time on an average year due to the higher than average rainfall experienced from February – July 2021 in the southwest of the state. Flood levels in the river fronting the Subject Site extended to the outer edge of the riparian zone surrounding the river. There was only one location along the river where the flood levels of the river encroached into the Subject Site at the time of the site investigation, this was adjacent to where the Eastern Creek meets the river. The flood levels seen in the Blackwood River on the 3rd August 2021 during the site investigation are used to determine the setbacks for the development, given they are the highest levels seen in recent times (M. Hardey 2021 pers. Comms., 3 August). Photographs of the Blackwood River fronting the Subject Site are shown on Photographs 7 and 8.

Photo 7: The Blackwood River fronting the Subject Site near the location of soil testing site TP6. Flood levels extend to the outer edges of the riparian zone outside of the Subject Site.

Photo 8: The Blackwood River fronting the Subject Site near the location of TP4. Flood levels extend beyond the river channel to the outer edges of the riparian zone outside of the Subject Site.

Water quality testing was conducted at one location within the Blackwood River, adjacent to soil testing location TP4. Water quality testing was conducted using a Horiba-50 Water Quality Meter. Testing results are presented in Table 5.

Table 5: Water quality Testing of the Blackwood River

	Temperature (°C)	рН	Electrical Conductivity (mS/cm)	Dissolved Oxygen (mg/L)	Total Dissolved Solids (g/L)
Blackwood River	10.96	7.15	3.65	8.99	2.38

Water quality testing results found that the surface water within the Blackwood River fronting the Subject Site was slightly saline to brackish with a neutral pH. The dissolved oxygen was consistent with fresh flowing water and similarly to the electrical conductivity the total dissolved solids was elevated when compared to ANZECC water quality guidelines

The post-development scenario shall maintain or improve the water quality of the Blackwood River.

3.8 Hydrogeology and Groundwater

Australian Geoscience Mapping and Department of Water 250K Hydrogeological mapping places the Subject Site within three hydrogeological zones, being:

Archaean (Ano) – with the geology described as 'Granitoid gneiss, migmatite and minor schist; subsurface generally weathered to clay (indicated by lighter colour) (outcrop)' and the aquifer described as; 'Fractured and weathered rocks - local aquifer, very minor or no groundwater resources'. and

Archaean (Ago) – with the geology described as '*Granitoid rock, porphyritic and even-grained; subsurface generally weathered to clayey sand (indicated by lighter clour) (outcrop)*' and the aquifer described as; '*Fractured and weathered rocks - local aquifer, minor groundwater resources*'. and

Archaean (An) – with the geology described as 'Granitoid gneiss, migmatite and minor schist; subsurface generally weathered to clay (indicated by lighter colour)' and the aquifer described as; 'Fractured and weathered rocks - local aquifer, very minor or no groundwater resources'.

Hydrogeological mapping for the Subject Site is shown on Figure 5.

Groundwater levels across the site were measured as part of the site soil investigation. The investigation found groundwater was encountered near surface in the western portion of the site where dense clays were found to be present. Groundwater levels here ranged between 0.17 and 0.65 m below ground level. The groundwater encountered is not likely an indication of the true local surficial groundwater table rather a perched groundwater table, perching on the dense clays below. Groundwater was not encountered to 2 metres depth in the southern portion of the site fronting the river or in the north of the site further indicating the groundwater in the west is a result of a perched water table.

The Subject Site is not located within a Public Drinking Water Source Protection Area (DWER, 2001b).

3.9 Wetlands

There are no Conservation Category Wetlands (CCW) or classified Environmentally Sensitive Areas (ESA) within the Subject Site or within the vicinity of the Subject Site. The Blackwood River, whilst not classified by Government Departments as a CCW or ESA is a major drainage network and resource that passes through much of the southwest of the state. Long-term maintenance of the river's biological diversity, soil structure and water quality and quantity should be a primary consideration.

4 Wastewater Management

4.1 Site Suitability

The health and environmental requirements for wastewater treatment and disposal for developments not serviced by deep sewerage systems are contained in the *Government Sewerage Policy*, (DPLH, 2019a). The Subject Site is situated in an area that does not have access to deep or reticulated sewerage and is not classified as a Sewage Sensitive Area (DPLH, 2019b). The *Government Sewerage Policy* (DPLH, 2019a) states minimum requirements apply for all on-site sewage disposal systems.

A site assessment was conducted to assess the site for onsite effluent disposal suitability. The assessment of the site involved physical site testing under late winter conditions and analysis of environmental constraints to the site and the potential use of onsite effluent disposal. As described in Section 3.6 soil testing conducted 3rd August 2021 involved detailed soil analysis, photographic recording, logging of soil types and measuring of water table by Bio Diverse Solutions.

The soils on site were found to consist of;

- Silty sand topsoil over deep sands, no groundwater encountered (found along the river foreshore);
- Silty sand over moderately to poorly sorted sandy loam and sandy clay loam with low plasticity and no groundwater encountered (found in the higher elevations in the north east of site); and
- Silty sand over clay with high plasticity, a perched water table and scattered granite rock outcrops throughout (found in the west of the site).

To enable use of the soils having heavy clays, a perched water table and/or shallow bedrock for onsite effluent disposal such as those seen in the west of the Subject Site, special design requirements and distribution techniques or soil modification procedures are necessary to ensure the rate of percolation of effluent through the soil is less than the effluent generation rate. Onsite effluent disposal on the sands in the south should be achievable using a typical leach drain system, however much of this soil type is found within the 100m setback requirement to the Blackwood River. In the northeast of the site where soils consist of sandy loams and clays of low plasticity further permeability testing is recommended to establish whether typical leach drain systems can be successfully utilised or whether special design requirements are required.

The Subject Site whilst undulating in topography does not exceed the minimum grade requirements (1:5) for onsite disposal as outlined in Table 3 of the Draft Government Sewerage Policy (2019a).

Groundwater was not encountered to 2 metres depth across the majority of the site, groundwater was encountered near surface in the west of the site where groundwater was found to be perching on the heavy clays below. Special design requirements will be required here to ensure the minimum requirement of 0.6m of separation between groundwater and onsite effluent disposal is achieved.

A minimum setback of 100m between onsite effluent land application areas and the Blackwood River shall be established and a minimum setback of 50m between land application areas and the seasonal creek lines shall be established given the use of secondary treatment systems, with a 100m minimum setback to the creek lines required without the use of secondary treatment systems.

Table 6 outlines a summary of policy and compliance of the site to minimum requirements. Environmental constraints pertaining to onsite effluent disposal and the required setbacks to waterways are shown on Figure 6.

Table 6: Minimum requirements for all on-site wastewater disposal systems and design specific standards

Site Feature	Minimum Requirement	Requirement met
Separation from waterways	a wellhead protection zone or on Crown land within a reservoir protection zone; 100 metres of the high-water mark of a reservoir or 100 metres of any bore used for public drinking water supply where: — a wellhead protection zone or reservoir protection zone has not been assigned; or — where existing lots would be rendered undevelopable by the wellhead protection zone.	Yes The Subject Site is not located within the vicinity of a Priority Drinking Water Source Area (PDWSA) and associated wellheads.
	30 metres of a private bore used for household/ drinking water purposes.	Yes There are no private production bores at the Subject Site or within the vicinity of the Subject Site. Any bore constructed on site shall be >30m from land application areas.
	100 metres of a waterway or significant wetland and not within a waterway foreshore area or wetland buffer. The separation distance should be measured outwards from the outer edge of riparian or wetland vegetation.	Yes A 100m setback for onsite effluent disposal shall be established between the outer edges of the Blackwood River and onsite effluent land application areas.
	100 metres of a drainage system that discharges directly into a waterway or significant wetland without treatment.	Yes A 100m setback shall be established between the outer edges of the riparian zone of the Blackwood River and onsite effluent land application areas. A 50m setback shall be established between seasonal creek lines and onsite effluent disposal areas given the use of secondary treatment units, 100m setback shall apply if secondary treatment units are not utilised.
	Any area subject to inundation and/or flooding in a 10 per cent Annual Exceedance Probability (AEP) rainfall event.	The only areas subjected to possible flooding are those adjacent to the Blackwood River, a 100m setback between the outer edges of the Blackwood River riparian zone and onsite effluent disposal shall be established.
Separation from groundwater – outside of public drinking water source areas.	 Where land is not within a public drinking water source area or a sewage sensitive area, the discharge point of the on-site sewage system should be located the following distances above the highest groundwater level: for loams and heavy soils, at least 0.6 metres for gravels, at least one metre for sands, at least 1.5 metres. Where a nutrient retentive secondary treatment system is used, at least 0.6 metres. 	Yes The groundwater was not encountered to 1.5m depth across the majority of the site under late winter conditions. A perched groundwater table was encountered <0.6m depth in the west of the site, special design requirements including the importation of fill is required here to achieve the minimum separation requirements to groundwater.
Land Application Area	A land application area should be provided for all development in accordance with tables 2 and 3 of this schedule for the disposal of sewage.	Yes The proposed land application areas shall be determined at structure plan stage and shall be in accordance with the Government Sewage Policy and the AS/NZS 1547:2012.

Table 6 continued.

Site Feature	Minimum Requirement	Requirement met
	 The land application area includes the area restricted to the distribution of treated sewage only and should be kept free of any temporary or permanent structures. Activities within the land application area shall not interfere with the function of the current and future land application system and people should avoid potential contact with effluent residues. Unless allowed for in the design, the land application area) should: not be built on or paved in a manner which precludes reasonable access; not be subject to vehicular traffic (other than a pedestrian-controlled lawnmower); not be subject to regular foot traffic such as pathways and clothes line areas; and should be kept in a manner which enables servicing and maintenance of the disposal current. 	Yes The future proposed land application areas shall be kept free of any temporary or permanent structures. The land application areas shall be placed in an area so that requirements are met. Site plan to be forwarded to the Shire of Boyup Brook and DoH prior to approval. Yes The proposed land application areas shall be a sufficient distance to areas that are utilized for activity or pedestrian traffic. The land application areas shall be placed in an area so that requirements are met. Site plan to be forwarded to the Shire of Boyup Brook and DoH prior to approval.
Gradient of the land application area	Where slope exceeds one in five (1:5), the land application area should be engineered to prevent run- off from the land application area. Surface contours should be provided on the site plan.	Yes Proposed land application areas shall be situated on land that does not exceed 1:5 gradient. Natural and finished gradients of land application areas shall not exceed 1:5 gradient. Site plan to be forwarded to SoBB/DoH prior to approval.
Location of land application area within building envelope	Local government may approve the location of land application areas outside building envelopes where proposed location meets requirements outlined above.	Noted

4.1 Land Application

In impermeable layers such as those containing clay and/or shallow bedrock/rock outcrops as seen across much of the Subject Site movement of water is restricted and effluent will move away from the disposal field very slowly. In this situation standard leach drains are subjected to failure because the rate of percolation of effluent through the soil is less than the effluent generation rate.

The most suitable system in this instance is a subsurface irrigation system (inverted leach drains). This type of system utilises shallow trenches laid in a suitable depth of good quality topsoil and perforated pressure lines which are nestled in a distribution pipe within the trenches. The dosed flow into the distribution pipe facilitates the longitudinal distribution of effluent into the soil along the full length of each shallow trench, thus avoiding spot loading of effluent at each perforation. Additional sand fill will be required particularly in those areas with a shallow perched groundwater table to achieve the minimum separation to groundwater of 0.6m for heavy clays.

Low pressure effluent distribution systems may utilise either primary or secondary treated water (ASNZS 1547:2012), in this instance a secondary system (aerobic treatment unit) is considered necessary. This consideration is based on the Subject Site's proximity to waterways/drainage networks and other land owners and the shallow depth of the perched water table in the west of the site.

Subsurface irrigation systems shall be designed to ensure that effluent is not applied at rates which exceed the absorption capacity of the soil. Care shall be taken to ensure that the application rate does not lead to:

- (a) Adverse effects on soil properties and plant growth through excess salt accumulation in the root zone during extended dry periods;
- (b) Harmful long-term environmental effects to the soil of the land application system or the adjacent surface water and groundwater; or
- (c) Increased risk to public health from surface ponding in the land application area or channelling or seepage beyond the land application area.

The subsurface irrigation system shall be designed to promote evapotranspiration. Care shall be taken to ensure that the irrigation area is well planted with plant species that area

- Water tolerant;
- Appropriate for the site conditions; and
- Planted at an appropriate density for effective evapotranspiration.

Typical leach drain systems may be utilised in the northeast of the site and in the south within the sand and sandy loam layers given infiltration/permeability at the base of the leach drains exceeds inflow of effluent into the system and the minimum groundwater separation requirements as outlined in the Government Sewerage Policy (DPLH, 2019a) are met. Infiltration/permeability rates shall be confirmed upon subdivision to establish the type of onsite effluent disposal system required for each lot.

Figure 6: Onsite effluent disposal requirements and constraints

5 Local Water Management Strategy

5.1 Water Sustainability Initiatives

5.1.1 Water Supply

Water supply to households is to be via extension of the scheme water system. The project civil engineer will negotiate the extension of the system with Water Corporation Western Australia.

5.1.2 Water Efficiency Measures

To achieve water efficiency targets, households are to be built consistent with current BCA water efficiency standards. Water efficiency initiatives are proposed to reduce potable water demand for irrigation of residential lots. These include encouragement of:

- Minimising turf areas;
- Selection of predominantly local native, drought tolerant plants;
- Use of waterwise gardens, restricted lawn areas and water wise lawn varieties;
- Use of rainwater tanks, and
- Community education initiatives on water conservation and reuse.

5.2 River Foreshore Management

As part of the LWMS the following key measures will be implemented to ensure the adjacent Blackwood River will not be negatively impacted by the proposed development;

- The first 15mm of runoff from the internal road network during storm events will be retained, treated and infiltrated within the Subject Site;
- Post development outflows from storm events up to the peak 20% Annual Exceedance Probability (AEP) will be maintained to pre-development outflows;
- The general post-development hydrology of the site will be consistent with the pre-development hydrology; and
- Land application areas for onsite effluent disposal will be located a minimum of 100m from the outer edges of the riparian zone of the Blackwood River.

5.3 Stormwater Management

5.3.1 Design Capacity

The stormwater management system for the development has been designed in accordance with the guidelines of the DWER through the Better Urban Water Management framework and the requirements of the Shire of Boyup Brook. The stormwater drainage system has been designed using a major/minor approach.

The stormwater drainage system is designed to manage a range of rainfall events up to 1% AEP. The major drainage system is designed for rainfall events greater than the 20% AEP, up to the 1% AEP.

The major system uses overland flow paths, which includes grading the road network to direct flow to the lowest point of the catchment for flood mitigation.

The minor drainage system has capacity for frequent rainfall events up to the 20% AEP and includes the pipe drainage system, soak wells and bioretention storage areas. The minor drainage system is designed to also provide the structural controls for water quality treatment.

5.3.1 Stormwater Modelling

The stormwater modelling has been completed utilising the Rational Method and the Boyd method. A critical design criterion for both these methods includes the runoff coefficients. The pre-development and post-development runoff coefficients assumed for the Subject Site are shown in Table 7.

Table 7: Runoff coefficients

	RUN OFF COEFFICIENT					
LAND USE	First 15mm	20% AEP	1.0% AEP			
Agricultural land	0	0.1	0.2			
Road Reserve	0.7	0.8	0.8			
Lots	0	0.2	0.3			
Bushland	0	0.1	0.1			

The predevelopment site exists as six defined catchments and is modelled post development as six catchments. The predevelopment and post development catchments are shown on Figures 5 and 7. The total area of each catchment and the estimated land use area for each catchment is presented in Table 8. Due to the lack of a defined structure plan at the rezoning phase the post-development road reserve area has been assumed as 7% of the total of each catchment, it is our understanding that this is a conservative estimate.

Table 8: Predevelopment catchment areas

l and lise (ha)	Catchment						
	А	В	С	D	Е	F	
Pre-development							
Agricultural land (ha)	47.2	18.5	43.0	25.4	46.0	37.6	
Bushland (ha)	1.7	-	-	4.1	-	-	
Total Area (ha)	48.9	18.5	43.0	29.5	46.0	37.6	
Post-development	Post-development						
Road Reserve (ha)	3.3	1.3	3.0	1.8	3.2	2.6	
Lots (ha)	43.9	17.2	40.0	23.6	42.8	35	
Bushland/POS (ha)	1.7	-	-	4.1	-	-	
Total Area (ha)	48.9	18.5	43.0	29.5	46.0	37.6	

Multiple storm events have been modelled utilising the Rational Method as described in Australian Rainfall and Runoff (AR & R) (Engineering Australia, 2001). Predevelopment outflow rates have been calculated based upon peak flow stream discharge as determined by Section 1.4 of AR & R.

Rainfall intensities for the various storm events and storm durations are calculated and provided by the Bureau of Meteorology (BoM) computerised design IFD Data System (www.bom.gov.au). Calculations have been undertaken utilising up to date IFD charts.

The Boyd equation has been utilised to calculate the stormwater storage volume required for each catchment based on the post-development outflow from the site and the allowable outflows set for the stormwater storages based on the peak pre-development outflow. The Boyd equation is considered a conservative estimate of stormwater storage volume calculation.

5.3.1 Minor Drainage System

The minor drainage system is defined as the series of swales, kerbs (flush or no kerb), pipes and gutters designed to convey runoff generated by minor storms up to and including the 20% AEP storm event. The minor drainage system incorporates a treatment train of best management practice (BMP) water quality structural controls such as vegetated storage systems that provide water quality treatment in the Subject Site.

Key elements of the minor drainage system strategy are as follows:

- Soakwells and/or rainwater tanks shall be adopted for lot drainage provided to infiltrate or store the first 15mm of rainfall on the lots;
- Drainage treatment train utilising roadside swales and bioretention storages designed to treat the first 15mm of rainfall, by providing infiltration at source. Swales and bio-retention storages shall be designed to convey up to the 20% AEP storm event;
- Where required, pipe drains sized to convey runoff from the 20%AEP storm event;
- The base of the bio-retention storages will be underlain with 0.5m depth of amended soil and planted. The specifications for the amended soil and the planting are provided in Section 5.5;
- Outflow from the bio-retention storage will be set at the top water level from the first 15mm runoff event, this is generally set at 0.3m depth to allow for adequate water quality treatment. Outflow will be via an outlet pipe sized to match the peak pre-development outflow from the 20% AEP event; and
- The maximum side slopes of the bio-retention storages will be 1:6. The maximum depth of the bioretention storage will be 0.9m.

The base of the stormwater storage/swale will be treated with amended soils and vegetation to provide a treatment zone as stormwater is conveyed through the corridor. The base area will be a minimum of 2% of the connected impervious area (road area) to provide sufficient treatment capacity.

The First 15mm and the 20% AEP storage requirements are presented in Table 9. The minor stormwater management plan for the Subject Site is shown on Figure 10.

	Catchment					
	A	В	С	D	E	F
First 15mm						
Runoff Volume (m ³)	346	136	315	189	336	273
Storage Volume required (m ³)	346	136	315	189	336	273
Ponding Depth (m)	0.3	0.3	0.3	0.3	0.3	0.3
20% AEP						
Critical Storm Duration (hours)	1	0.5	1	1	1	1
Storm Duration Runoff Volume (m ³)	2,470	750	2,220	1400	2370	1930
Storage Volume (m ³)	1,430	440	1,300	770	1,390	1,130
Ponding Depth (m)	0.9	0.9	0.9	0.9	0.9	0.9
Peak Outflow from Storage (m ³ /s)	0.29	0.17	0.25	0.17	0.27	0.22

Table 9: Minor Drainage System Requirements

5.3.1 Major Drainage System

The major drainage system includes the use of roads, swales, drainage reserves and open spaces to provide safe passage of stormwater runoff from major storm events greater than the 20% AEP up to the 1%AEP. The major drainage system is described below:

- Roads graded to direct flow overland to the lowest point in each catchment. The ultimate road low
 point will be adjacent to public open space (POS). Low points in the site catchments are predominantly
 along the Blackwood River foreshore however one POS area will be required in the northeast of the
 Subject Site to accommodate the drainage from this portion of the site. Road drainage from storm
 events greater than the peak 20% AEP event up to the peak 1% AEP event will discharge unattenuated
 towards the Blackwood River or Boyup Brook Arthur Road drainage system. The major event
 overland flow is designed to bypass the bio-retention storage areas to prevent scouring and washout
 of these structures;
- All building pad finished levels will have a minimum 0.5 m clearance above the estimated 100yr ARI flood level in the road and POS; and
- A 100m setback is required between the 2021 flood level in the Blackwood River and building envelopes.

The major drainage system for the Subject Site is shown on Figure 7.

5.4 Groundwater Management

The groundwater management objectives for the Subject Site are to:

- Manage groundwater levels to protect infrastructure and assets;
- Maintain groundwater regimes for the protection of groundwater dependent ecosystems;
- Protect the value of groundwater resources; and
- Adopt nutrient load reduction design objectives for discharges to groundwater.

The following strategies will be implemented for the proposed development of the Subject Site to ensure the above objectives are met:

- To protect infrastructure from high seasonal groundwater levels imported fill will be required to achieve the minimum separation of 2 metres between finished building level and the average annual maximum ground water level;
- Where the development finished level is less than 2.0m above the average annual maximum groundwater level subsoil drains will be required; and
- Clay soils found below bio-retention storage areas should be excavated and removed prior to installation of amended soil media to prevent perching of water within the storages.

Groundwater perching was evident in the west of the Subject Site where groundwater levels were seen near surface. The groundwater strategies above shall be utilised in these areas to ensure protection of infrastructure and groundwater resources. Groundwater was not encountered to 2 meters during the late winter site investigation in the north, east and south of the Subject Site and therefore groundwater management strategies may not be required here. Groundwater levels across the site should be confirmed prior to development to establish average annual maximum groundwater levels.

5.5 Water Quality Management

The effective implementation of the structural and non-structural controls as part of the development will enhance water quality from this site as a result of the land use change from agricultural to rural residential.

The Subject Site uses a treatment train of structural and non-structural controls to treat up to the first 15mm of rainfall from storm event.

Structural controls include the use of:

- Soakwells (where soil media allows) which will be used to infiltrate runoff from rooves and infiltrate stormwater at source. Infiltration of storm water at source allows for treatment of water as it moves through the soil profile.
- Bio-retention storages which will receive runoff from the development's internal road network. Bio-retention storages are designed to treat the first flush event (first 15mm) and convey up the 20% AEP storm event. Bio-retention storages will allow for infiltration at source, they will be underlain with amended soil and planted to allow for plant root uptake of nutrients and heavy metals. The minimum specifications for all bio-retention storages are presented in Table 10.

Table 10: Minimum requirements for bio-retention swales

Item	Specification
Amended soil media	Well graded sand.
•	Clay and silt content <3%.
•	Organic content between 3 and 5%.
•	Hydraulic Conductivity (sat) >150mm/hour.
•	Light compaction only.
•	Infiltration testing of material prior to installation and again once construction is complete. On-going testing as per the monitoring program.
Plant selection •	In accordance with Vegetation Guidelines for Stormwater Biofilters in the South- West of WA (Monash University, 2014).
•	Tolerant of periodic inundation and extended dry periods.
•	Spreading root system.
•	Preferential selection of endemic and local native species.
•	Planting to provide 70-80% coverage at plant maturity.
Planting density and distribution	Planting density appropriate for species selection. Even spatial distribution of plant species.

The bio-retention systems should be sized to function correctly with a hydraulic conductivity (K) (saturated) of at least 3 m/day. Research conducted by the Facility for Advancing Water Biofiltration (FAWB, 2008) indicates that the desired K_{sat} is in the range of 2.5 to 7 m/day, to fulfil the drainage requirements as well as retain sufficient moisture to support the vegetation. The FAWB (2008) research also specifies that for vegetated systems some clogging will occur in the first few years until the vegetation is established. Once the plants are established, the roots and associated biological activity maintain the conductivity of the soil media over time.

Non-structural source controls to reduce nutrient export from the Subject Site will focus on reducing the need for nutrient inputs into the landscape. The following strategies are proposed;

- Promotion of the use of local native plants for landscaping to new lot owners. The use of local native plants will reduce the need for fertilisers across the site; and
- Undertake education campaigns regarding source control practices to minimise pollution runoff into stormwater drainage system.

6 Implementation

6.1 Construction Management

Any temporary stormwater storage required during construction will be built where the final storage area will be located. The temporary storage will be sized to contain the ultimate capacity of stormwater runoff from the connected area. Measures will be taken to prevent the transportation of sediment during the construction phase including infiltrating at source where possible and sand bagging/rock placement at the inlet of any pipe systems discharging outside the Subject Site. Remedial measures will be undertaken by the developer if any disturbances to the Blackwood River foreshore area are caused during construction.

6.2 Maintenance of Drainage Systems

The bio-retention storage areas and drainage system will require regular maintenance to ensure its efficient operation. It is considered the following operating and maintenance practices will be required and undertaken by the client periodically until successful practical completion of the development and handover to the Shire of Boyup Brook. Following handover, it is the Shire's responsibility to maintain drainage structures accordingly:

- Removal of debris to prevent blockages;
- Maintenance of vegetation in bio-retention systems/ storages; and
- Cleaning of sediment build up and litter layer on the bottom of storages.

6.3 Monitoring Program

The monitoring program has been designed to allow a quantitative assessment of hydrological impacts of the proposed development.

6.3.1 Hydraulic Performance Monitoring

The hydraulic performance monitoring will aim to measure the movement of storm water through the stormwater storage structures to determine if stormwater conveyance is consistent with the intended design.

Where amended soil profiles have been installed in the bio-retention storage, infiltration testing shall be completed to test the hydraulic conductivity of the media. Testing should be repeated every 12 months to ensure clogging of the storages does not occur.

Water levels in the stormwater storage shall be observed during significant storm events to ensure stormwater storage is consistent with design and not overflowing.

6.3.2 Groundwater Monitoring

A series of groundwater monitoring bores shall be established across the Subject Site to determine predevelopment groundwater levels. It is recommended a minimum of 11 monitoring bores be established on the Subject Site. The recommended location of the groundwater monitoring bores is shown on Figure 8.

Figure 8: Groundwater Monitoring Locations

Groundwater levels shall be measured quarterly and include two late winter periods prior to development to establish baseline groundwater level data. Two years of post-development groundwater level monitoring (quarterly) shall be conducted with results compared to pre-development levels. If groundwater levels are found to exceed pre-development groundwater levels by more than 500mm for a period of more than 3 months a review of the development design and operations will be required and alterations/modifications to the development will be conducted to reduce groundwater levels accordingly.

DISCLAIMER

This Bushfire Management Plan has been prepared in good faith. It is derived from sources believed to be reliable and accurate at the time of publication. Nevertheless, this plan is distributed on the terms and understanding that the author is not responsible for results of any actions taken based on information in this publication or for any error or omission from this publication.

Smith Bushfire Consultants Pty Ltd has exercised due and customary care in the preparation of this Bushfire Management Plan and has not, unless specifically stated, independently verified information provided by others.

Any recommendations, opinions or findings stated in this report are based on circumstances and facts as they existed at the time Smith Bushfire Consultants Pty Ltd performed the work. Any changes in such circumstances and facts upon which this document is based may adversely affect any recommendations, opinions or findings contained in this plan.

© SMITH BUSHFIRE CONSULTANTS Pty Ltd – December 2022

Section 1: Proposal Details

The site is located within two kilometres of the Boyup Brook townsite. It abuts the Blackwood River. The site is undulating with the maximum slopes being around seven degrees. The vegetation is principally grassland with some pockets of tree overstorey, and the site is currently grazed. The entire site is not declared as bushfire prone and therefore AS 3959 construction standards for the future dwellings do not apply within these areas.

This project is at the structure plan and scheme amendment stage. The proponent will be seeking to rezone the site from 'Rural' to 'Residential R5' and 'Rural Residential'. This will be a staged development where high risk uses are not proposed, and the access issues will be addressed at the subdivision application stage.

Figure 1. The copy of the site plan as provided with the structure plan/scheme amendment.

Bushfire Management Plan – Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook

Figure 3. Screen shot of map of bushfire prone areas for the subject site.

The proposal is to develop the current large lots and create a number of smaller new lots. One lot will contain the current house, garage and other built assets. It is proposed that the new lots will also ultimately have new dwellings located on them.

This project is at the structure plan and scheme amendment stage. The proponent will be seeking to rezone the site from 'Rural' to 'Residential R5' and 'Rural Residential'. The scope of this report did not therefore support BAL Contour mapping which will be undertaken at a later stage of planning. Not all of the site is declared bushfire prone.

Section 2: Environmental Considerations

The State Planning Policy 3.7 recognises the need to consider bushfire risk management measures alongside environmental, biodiversity and conservation values. A desktop search has identified that the following are not registered for the development site or immediately surrounding area:

- Threatened and priority flora;
- Threatened and priority fauna;
- Contaminated site registration:
- Clearing Regulation Environmental Sensitive area.

The desktop search also identified that the following cultural issues are not registered for the development site or immediately surrounding area, except for the Blackwood River and adjacent terrestrial land:

- Aboriginal heritage site;
- Watercourse on the site is impacted by Aboriginal heritage;
- Heritage Council site.

Subsection 2.1: Native Vegetation – modification and clearing

There will not be a need to clear significant areas of native vegetation as a component of this development. Future lots and dwellings will generally adapt to retaining existing native vegetation, with areas of cleared land provided as Asset Protection Zones (APZ) on the 'Rural Residential' lots and 'Residential R5' will probably be cleared and then domestic gardens established. There are significant areas of introduced pasture grass on the site that are currently grazed. The tree overstorey coverage on the site is in the main sparse and constitutes less than 10% overstorey coverage and is principally native species. There are two pockets within the development site, being a woodland area and a forest pocket.

Subsection 2.2: Re-vegetation/Landscape Plans

Relatively small areas of the sparse current overstorey and grass vegetation may be removed during the development and construction of the future dwellings and APZ. There may be cultivated gardens developed once people move into the dwelling, but this will not be a component of a site revegetation plan. There is expected to be some revegetation of water courses and the Blackwood River foreshore with native vegetation. Details to be progressed at the subdivision stage via management plans. Future development is required to take account of revegetation.

It is expected the subdivider will install street trees to enhance the site's amenity. The street trees are expected to be London Plane trees which have lower oil levels and are lower fire risks compared to most native vegetation.

Section 3: Bushfire Assessment Results

Any dwellings located on the new lots have all been assessed as being Bushfire Hazard Level (BHL) rated of moderate, which permits development, and a BAL rating of BAL–12.5 (or BAL–29 depending the slope) as the State requires an APZ. The vegetation that will need to be removed has been assessed as grassland or grassland under a sparse open woodland overstorey.

Subsection 3.1: Assessment Inputs

The assessment inputs are shown in the forthcoming pages and are supported by a vegetation assessment, photographic evidence and text to support the vegetation assessment and a BHL Assessment map.

Site Assessment

The assessment of the proposed subdivision was undertaken on 29 March 2021 for the purpose of determining the Bushfire Attack Level in accordance with AS 3959 (Method 1).

Figure 4. Vegetation Classification Map.

Vegetation Classification

All vegetation within 150 metres of the proposed subdivision as indicated on the site assessment plan was classified in accordance with the Western Australian Government criteria and Clause 2.2.3 of AS 3959 was applied. Each distinguishable vegetation plot with the potential to determine the Bushfire Attack Level is identified below. AS 3959 only requires consideration of 100 metres between vegetation and the building and 50 metres between vegetation and the building for grassland.

Notes to Accompany Vegetation Classification

1. Plot 1

Exclusion – Low threat vegetation and non-vegetated areas Clause 2.2.3.2 (e) and (f)

This plot comprises the roads on the boundary of the development site.

2. Plot 2

Class G – Grassland under an open woodland (AS 3959 classification – B – 06).

This plot comprises the pasture grass under an open woodland across the development site and neigbouring lots. This plot contains some relatively steep slopes but the slopes do not exceed 9°. The vast majority of this farm and the neighbouring farms have been used for farming purposes of grazing or cropping.

3. Plot 3

Class B – Woodland (AS 3959 classification – B – 05).

This plot comprises the woodland that is on the proposed development site and on the neighbouring land. It also includes the neigbouring lot to the west and south. The woodland to the south is adjacent to the Blackwood River. There is also a small isolated area of woodland located within the development site. The majority of the woodland plots comprise wandoo and also flooded gum, both recognised as woodland vegetation categories.

4. Plot 4

Class A – Forest (AS 3959 classification – A – 03).

The forest plot is a small area within the development site. It has been classified as a forest solely on the basis of the tree overstorey coverage being greater than 30%. This portion of the forest plot has an absence of the multi-tiered scrub understorey. In applying the precautionary principle it is important to determine the likelihood of the surface vegetation changing, and becoming a scrub vegetation in the short, mid or long term. It is highly improbable that the surface vegetation will be anything other than the grassland or simply leaf litter as there is an absence of seed in the soil and there is no seed source available within the nearby areas.

Bushfire Management Plan – Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook

Bushfire Management Plan – Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook Slope

	Measurement
JZ UMULSI	Measurement Result
	604.2 Meters
	Clear
CKARA I	70 metre slope over 604 metres = 1:8.6. This equates to 7°

Figure 7. Slope to the north-east of the southern portion of the site.

Figure 8. Slope in the southern portion of the site.

Plot	Applied Vegetation Classification	Effective Slope Under the Classified Vegetation (degrees)	Separation Distance to the Classified Vegetation (metres)	BAL Contour
1	Exclusion – Low threat vegetation and non-vegetated areas Clause 2.2.3.2 (e) & (f)	Not applicable	Not applicable	LOW
2	Class G – Grassland under an open woodland	Slope impact is subject to dwelling location	Minimum 20 m	12.5
3	Class B – Woodland	Slope impact is subject to dwelling location	Minimum 20 m	12.5
4	Class A – Forest	Slope impact is subject to dwelling location	Minimum 21 m*	29

Note - * indicates that to achieve a BAL–29 rating requires a minimum separation between the forest vegetation and dwelling. This distance must increase if the forest is downslope of the dwelling. BAL–29 is the highest BAL rating that is supported by the State Government.

Section 4: Identification of bushfire hazard issues

The most significant bushfire hazard is the extensive native vegetation associated with the forest and woodland on land neighbouring the development site. The slope on the development site is a potential bushfire hazard as access will be limited, until the proposed development and associated roads are constructed. The native vegetation could be sufficiently separated from any potential dwelling by ensuring that an APZ on the 'Rural Residential' lots is established and maintained, and the dwelling is constructed to the appropriate standard.

Future lots and dwellings will generally adapt to retaining existing native vegetation, with areas of cleared land provided as dwellings are constructed, new gardens established and APZ surround the dwellings where appropriate.
Section 5: Assessment against the Bushfire Protection Criteria Subsection 5.1: Compliance Table

Bushfire	Method of Compliance	
protection criteria	Acceptable solutions	Proposed bushfire management strategies
Element 1: Location	A1.1 Development location	The potential future dwellings will be located in an area that is restricted to the BHL rating of moderate and the BAL rating will be BAL–29 or less.
Element 2: Siting and design	A2.1 Asset Protection Zone (APZ)	There is requirement through this BMP for a 20 metre APZ associated with any new dwellings within the subdivision.
Element 3: Vehicular	A3.1 Two access routes	Boyup Brook-Arthur Road provides multiple access options for the proposed new lots, and the future development road network.
Access	A3.2 Public road	Boyup Brook-Arthur Road and Bode Street are constructed. New roads associated with the development will be built to comply with the Guidelines. The indicative locations of the new roads connecting to Boyup Brook-Arthur Road and Bode Street are shown on the LSP.
	A3.3 Cul-de-sac (including a dead-end-road)	All roads will be constructed to comply with the State's Guidelines.
	A3.4 Battle-axe	All roads will be constructed to comply with the State's Guidelines.
	A3.5 Private driveway longer than 50 m A private driveway is to meet detailed requirements contained within the Guidelines.	It is anticipated that there will may be driveways longer than 50 m constructed with this subdivision. If there are they will be compliant with the Guidelines.
	A3.6 Emergency access way	Nil will be constructed with this subdivision.
	A3.7 Fire service access routes (perimeter roads)	A FSAR will be combined with the walk/cycle track along the river foreshore. Firebreaks will continue to be maintained in accordance with the Shire's firebreak order.
	A3.8 Firebreak width	During establishment, and after subdivision, firebreaks will be maintained to comply with the Shire's firebreak order.
Element 4: Water	A4.1 Reticulated areas	A reticulated scheme water system developed to comply with the State's requirements will be connected as a component of this development for the residential R5 areas. This includes fire hydrants. In the rural residential area there will not be reticulated scheme water.
	A4.2 Non-reticulated areas	In the rural residential zone there will not be reticulated scheme water. A firefighting water tank location is identified on the LSP. Each lot will have its own water supply
	A4.3 Individual lots within non-reticulated areas (Only for use if creating 1 additional lot and cannot be applied cumulatively)	Not applicable.

Bushfire Management Plan - Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook

Location details: Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook Assessment Date: 5 December 2022 Prepared by: Ralph Smith Accreditation level: 27541 Accreditation expiry date: August 20213 Date of aerial photo: January 2015 Version No: 1.2

ealed roads	-

REQUIREMENTS

- The residential (R5) component of the site will be serviced by a reticulated scheme water system developed to comply with the State's requirements. It will be connected as a component of this development. This includes fire hydrants.
- 2. There is a requirement for a 20 m APZ on the new dwellings within the (R5) subdivision but will be required on the 'Rural Residential' larger lots.
- 3. Alternative bitumen access options are available and will be developed. Idicative locations are shown.
- 4. This is the principle hazard vegetation.
- 5. There is no slope of 10° or greater.
- 6. Grassland vegetation.

Section 6: Responsibilities for Implementation and Management of the Bushfire Measures

This section is to set out the responsibilities of the developer/s, landowner/s and local government with regards to the initial implementation and ongoing maintenance of the required actions.

DEV	DEVELOPER – PRIOR TO ISSUE OF TITLES				
No.	Implementation Action	Subdivision Clearance			
	A notification pursuant to Section 165 of the <i>Planning and Development Act 2005</i> , is to be placed on the certificate(s) of title of the proposed lot(s) with a Bushfire Attack Level (BAL) rating or 12.5 or above, advising the existence of a hazard or other factor.				
1	(deposited plan).				
	The notification is to state as follows:				
	"This land is within a bushfire prone area as designated by an Order made by the Fire and Emergency Services Commissioner and is subject to a Bushfire Management Plan. Additional planning and building requirements may apply to development on this land" (Western Australian Planning Commission).				
2	Comply with the relevant local government annual firebreak notice issued under s33 of the Bush Fires Act 1954.				
3	The developer will be responsible for extending reticulated scheme water network into the nominated section of the development that is compliant with the State's requirements.

Appendix 1

Vehicle access technical requirements extract from the Guidelines for vehicle access (page 76) and private driveways longer than 50 metres (page 75). This is only applicable if the driveway is longer than 70 metres, which is possible likely to be required.

Table 6: Vehicular access technical requirements

TECHNICAL REQUIREMENTS	1 Public roads	2 Emergency access way ¹	3 Fire service access route ¹	4 Battle-axe and private driveways ²	
Minimum trafficable surface (metres)	In accordance with A3.1	6	6	4	
Minimum horizontal clearance (metres)	N/A	6	6	6	
Minimum vertical clearance (metres)		4.5			
Minimum weight capacity (tonnes)	15				
Maximum grade unsealed road ³			1:10 (10%)		
Maximum grade sealed road ³	As outlined in the IPWEA	1:7 (14.3%)			
Maximum average grade sealed road	Subdivision 1:10 (10%)				
Minimum inner radius of road curves (metres)	Ondennes	-	8.5		

Notes:

¹ To have crossfalls between 3 and 6%.

² Where driveways and battle-axe legs are not required to comply with the widths in A3.5 or A3.6, they are to comply with the Residential Design Codes and Development Control Policy 2.2 Residential Subdivision.

³ Dips must have no more than a 1 in 8 (12.5% -7.1 degree) entry and exit angle.

Bushfire Management Plan - Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook

Guidelines for Planning in Bushfire Prone Areas

-

ELEMENT 3: VEHICULAR ACCESS

PERFORMANCE PRINCIPLE

P3iv

Vehicular access is provided which allows emergency service vehicles to directly access all habitable buildings and water supplies and exit the lot without entrapment.

ACCEPTABLE SOLUTIONS

A3.5 Battle-axe access legs

Where it is demonstrated that a battle-axe access leg cannot be avoided due to site constraints, it can be considered as an acceptable solution.

There are no battle-axe technical requirements where the point of the battle-axe access leg joins the effective area of the battle-axe lot, is less than 50 metres from a public road in a reticulated water area.

In circumstances where the above condition is not met, or the battle-axe lot is in a non-reticulated water area, the battle-axe access leg is to meet all the following requirements:

- requirements in Table 6, Column 4; and
- passing bays every 200 metres with a minimum length of 20 metres and a minimum additional trafficable width of two metres (i.e. the combined trafficable width of the passing bay and constructed private driveway to be a minimum six metres).

A3.6 Private driveways

Dd Do

- There are no private driveway technical requirements where the private driveway is: • within a lot serviced by reticulated water;
- no greater than 70 metres in length between the most distant external part of the development site and the public road measured as a hose lay; and
- accessed by a public road where the road speed limit is not greater than 70 km/h.

In circumstances where all of the above conditions are not met, or the private driveway is in a non-reticulated water area, the private driveway is to meet all the following requirements:

- requirements in Table 6, Column 4;
- passing bays every 200 metres with a minimum length of 20 metres and a minimum additional trafficable width of two metres (i.e. the combined trafficable width of the passing bay and constructed private driveway to be a minimum six metres); and
- turn-around area as shown in Figure 28 and within 30 metres of the habitable building.

Page | 24

Appendix 2

The following is an extract from the Shire of Boyup Brook "2020-2021 Fire Information and Firebreak Notice."

FIREBREAKS

Under section 33 of the Bush Fires Act, you are required to carry out the fire prevention work specified below on any land within the Shire that is owned or occupied by you.

The work must be carried out by 30 November, unless approved otherwise, and maintained throughout the summer months until 1 May.

If an owner or occupier fails to comply with these requirements, he or she may be issued with an infringement notice (penalty \$250) or prosecuted, and the Shire may carry out the required work at the cost of the owner or occupier.

If it is impractical for any reason to clear firebreaks, or to take measures in accordance with these requirements, you may apply to the Shire in writing before 11 November, for permission to provide firebreaks in alternative locations, or to take alternative measures to prevent the outbreak or spread of a bush fire. If permission is not granted in writing by the Shire, you must comply with these requirements.

TOWN SITE LAND

On all land located within a town site (except for land zoned Rural and Special Rural as shown in the Shire of Boyup Brook Town Planning Scheme No 2 (Scheme)), you must -

 Where the area of land is 2023m² or less, clear the land free of all inflammable matter, except living trees and cultivated plants, shrubs and lawns, that are no greater than 5cm in height.

Bushfire Management Plan – Lot 51, 1007 & 1118 Boyup Brook-Arthur Road, Boyup Brook

2. Where the area of the land is in excess of 2023m², clear a 2.5m wide bare earth firebreak immediately inside all external boundaries of the land or immediately surrounding all buildings on the land by removing all inflammable matter and vegetation within the 2.5m wide firebreak between the ground and 4m above the ground.

SPECIAL RURAL LAND

On all land zoned Special Rural under the Scheme, you must -

- (a) clear a 2.5m wide bare earth firebreak immediately inside all external boundaries of the land by removing all inflammable matter and vegetation within the 2.5m wide firebreak between the ground and 4m above the ground; and
- (b) clear a 10m wide bare earth firebreak around all buildings and fuel storage areas by removing all inflammable matter and vegetation within the 10 metre wide firebreak between the ground and 4m above the ground.

RURAL LAND

- 1. On land zoned Rural under the Scheme, you must either -
 - (a) clear a 2.5m wide bare earth firebreak break immediately around all buildings, homesteads, hay sheds, fuel storage areas, caravans and mobile accommodation by removing all inflammable matter and vegetation within the 2.5m wide firebreak between the ground and 4m above the ground; and
 - (b) clear a second 2.5m wide bare earth firebreak break around all buildings, homesteads, hay sheds, fuel storage areas, caravans and mobile accommodation located not less than 20m nor more than 100m from the firebreak in paragraph (a) above by removing all inflammable matter and vegetation within the second 2.5m wide firebreak between the ground and 4 metres above the ground.

OR

2. As an alternative to the two firebreak system described in 1, clear a 10m wide bare earth firebreak immediately around all buildings, homesteads, hay sheds, fuel storage areas, caravans and mobile accommodation by removing all inflammable matter and vegetation within the 10m firebreak between the ground and 4m above the ground.

Appendix 3

Location of the current fire hydrants (blue dots) in the general area of the development and compliant with the Water Corporation standards. The a portion of the site (residential area) will be serviced by the reticulated scheme water system which includes the provision of fire hydrants and will be compliant with the State's requirements.

Figure 4: Local Planning Strategy Map for Boyup Brook Townsite and Surrounds

5.0 PLANNING AREAS

5.1 Overview

In addressing the broader issue of growth and regeneration of the local government area, one of the key actions is the identification and facilitation of developable land to accommodate economic and population growth. This section provides a greater level of detail for each of the planning areas, including a spatial plan for each, relevant planning considerations and site specific opportunities and issues.

5.2 Planning Areas

There are a total of 19 identified Planning Areas considered suitable for further detailed investigation for future development. These planning areas are listed below and shown in **Figure 5**, and are divided into five key planning area themes which are further explained in **Table 5**.

Mixed Use

- 1. Railway Parade
- 2. Forrest Street

Residential

- 3. Bridge Street
- 4. Beatty Street
- 5. Bridge and Gibbs Street
- 6. William and Short Street

Industrial

- 7. Ritson Street
- 8. Abel & Short Street A
- 9. Bridgetown Boyup Brook Road
- 10. Boyup Brook North Industrial
- 11. Donnybrook-Boyup Brook Road
- 12. Boyup Brook-Kojonup Road

Rur	al Residential
13.	Banks Road
14.	Rusmore Road
15.	Bridgetown Boyup-Brook Road & Banks Road
16.	Rural Residential Consolidation Area
17.	Boyup Brook North Residential Expansion (Residential/Rural Residential)
Rur	al Small Holdings

- 18. Stanton, Terry and Fern Valley Rd
- 19. Asplin Siding Road

PLANNING AREA	PLANNING DIRECTION	ACTION	RATIONALE	TIMEFRAME
Mixed Use	To provide additional commercial and residential opportunities which support the viability of the Townsite		Demand for additional commercial opportunities is difficult to accommodate due to the lack of suitable sites within the Townsite.	
Industrial	To facilitate the expansion of existing local business and attract new businesses to the Shire.	Investigate the potential of the subject land to accommodate development, and undertake planning framework modifications to facilitate this	Demand for expansion of existing industrial businesses, or new businesses looking to establish, is currently difficult to accommodate due to a lack of suitable land.	Short Term (1-3 Years) depending on outcomes of more detailed analysis and review.
Residential	To facilitate	development.	Population retention and growth is essential to the	
Rural- Residential	expansion of the local population and encourage local residents to		viability of the Shire, and a diversity of options for residential living is necessary to encourage residents	
Rural Small Holdings	Shire.		to stay within the Shire and people to move to the Shire.

17. BOYUP BROOK NORTH RESIDENTIAL EXPANSION

Site Details:

Lot 51 (4) Boyup Brook-Arthur Road, Boyup Brook Lot 1007 Boyup Brook-Arthur Road, Boyup Brook Lot 1118 Boyup Brook-Arthur Road, Boyup Brook

Land Area:

221.78 Ha (gross) 110.89 Ha (estimated Net Developable Area)

Planning Considerations:

Proposed Land Use: 'Rural Residential' or 'Residential' **Current Scheme Designation:** 'Rural'

Proposed Scheme Designation: 'Rural Residential' or 'Residential' **Structure Planning Required:** Yes (identify as 'Special Control Area - Structure Plan')

Lot Size/Density: 1 Ha (subject to detailed structure planning) Estimated LotYield: 111 lots (subject to detailed structure planning)

X Issues/Opportunities:

- Subdivision and development to be in accordance with WAPC SPP 3.7 – Planning in Bushfire Prone Areas and SPP 2.5 Rural Planning.
- 2. Compliance with Government sewerage policies.
- 3. Vegetation protection.
- 4. Suitable setbacks to, and landscape management near, the Blackwood River
- 5. Ability to access servicing for the lots,
- 6. Consideration of suitable development standards to occur through detailed structure planning.
- 7. Environmental Impact Assessment for any development in close proximity to the Blackwood River.

LEAFIELD- LOTS 51, 1007 and 1118

ENGINEERING SERVICING REPORT

1 Introduction

Peter Eastlake has been engaged by Mark Bombara to undertake a review into civil engineering related matters and infrastructure servicing opportunities and constraints for a potential residential and rural residential development of Lots 51, 1007 and 1118 Boyup Brook – Arthur Road, Boyup Brook. The name of the proposed development is Leafield, Boyup Brook

This report summarises the existing servicing infrastructure, the expected servicing infrastructure and the likely Local Authority engineering conditions required to be undertaken to achieve an anticipated Western Australian Planning Commission (WAPC) and Shire of Boyup Brook Structure Plan and Rezoning approval for the Site.

The information contained herein has been provided to assist in the understanding of the potential engineering issues and constraints involved in the Leafield development in accordance with current residential and rural residential subdivision requirements. It is assumed the residential subdivision will be an R5 density with larger lots to address land capability. The overall lot yield on the Site is approximately 360 lots/dwellings.

It is noted that the advice contained herein is general in nature, as no detailed engineering, environmental, geotechnical or other design work has been undertaken as part of this report. No detailed discussions with the local authority or any of the servicing agencies (unless otherwise specifically noted within where an issue was deemed to require additional clarification due to a significant effect on the potential for development).

A Local Water Management Strategy (LWMS) investigation and report was undertaken by Bio Diverse Solution in September 2021 and an associated Groundwater Monitoring Bore Report was prepared by WML in January 2022. This Servicing Report should be read in conjunction with these documents.

2 Site Description

The Site is located 2 kilometres northeast of the Boyup Brook town site on the Boyup Brook – Arthur Road. The Site is bound by Boyup Brook – Arthur Road to the north and the Blackwood River to the south. The Site is surrounded by rural landholdings. The area subject to rezoning is approximately 222 hectares.

The Site is currently cropping and grazing land with a dwelling and sheds in the northwest of the Site. The Site consists of cleared pasture with sparse areas of mature trees and vegetation. Historical aerial images dating back to 1996 do not indicate any other land uses, the latest aerial image is presented in Figure 1 below.

Figure 1: Aerial Photography (WA Now 2017)

3 Site Conditions

3.1 Geology

The Geology of the Site is predominantly silty sand over rock and/or sandy clay, which is suitable for residential development. Refer Section 3.6 of the LWMS which includes results of the soil investigation.

3.2 Topography

The Site generally grades from Boyup Brook-Arthur Road in the north to the Blackwood River to the south. The grade of the Site is generally moderate, with localised flat and steep areas. The road layout will need to consider the topography of the Site to ensure earthworks levels in the road reserve match as close as is reasonably practical to the natural levels. Refer Section 3.2 of the LWMS for further discussion of the Site topography.

3.3 Vegetation

Refer Section 3.4 of the LWMS.

3.4 Acid Sulphate Soil (ASS)

The Site does not fall within any known areas of ASS and ASS is not anticipated to be encountered, refer to Section 3.5 of the LWMS.

3.5 Existing Building Infrastructure

The Site contains a single residential home and associated small farm infrastructure in the northeast corner of the property. It is noted that the existing building infrastructure is to be retained in future lots following subdivision, and the subdivision proposed will take into consideration separation of the existing buildings to proposed boundaries.

3.6 Existing Servicing Infrastructure

The existing dwelling is currently served with power from the existing overhead powerlines traversing the property. The NBN communications to the Site are wireless. There is presently no reticulated water, sewer, or gas supplies to the Site.

3.7 Illegal Dumping and Contamination

Visual inspection of the Site does not indicate any areas of potential illegal dumping or areas potentially contaminated with unwanted waste, materials etc. Research of the contaminated sites database, Figure 2 below, does not indicate any form of contamination on the Site nor that the Site has been remediated in the past.

Figure 2: Contaminated Sites Database (Landgate (SLIP) March 2022)

3.8 Groundwater

Refer Section 3.8 of the LWMS

4 Development Siteworks

The siteworks/earthworks within the Site will be undertaken as necessary to facilitate the construction of roads, drainage and servicing infrastructure associated with the creation of the lots. Little or no bulk earthworks will be undertaken on the individual lots however future lot purchasers may choose to undertake earthworks to create their homes and infrastructure upon creation of the lots. This will be subject to the Shire of Boyup Brook's Building approvals process.

5 Development Infrastructure

5.1 Roadworks

The Shire of Boyup Brook will be the ultimate approval authority for any proposed road network. Road infrastructure will be designed in accordance with the approved Structure Plan and will be based on hierarchy appropriate to the residential and rural residential zoning, with each lot having road frontage.

The internal road locations will need to be cognisant of the terrain to ensure that suitable road gradients and economic constructability are achieved, with due regard to the Aboriginal Heritage areas.

It is anticipated that there will be two new road entrances on to the Shire controlled Boyup Brook – Arthur Road, as shown on the proposed Structure plan. The specific location of these intersections will be determined at the time of detailed design and will consider Site topography, appropriate sightlines, the existing tree line, drainage swales and the volumes of traffic generated by the new lots.

Another road connection to the existing Ritson Road reserve at the south east boundary of the site is proposed to facilitate a more direct connection towards Boyup Brook town site for the southern and eastern lots. Ritson Road reserve has currently an unsealed gravel road with the last section leading to the site having no road formation and being naturally vegetated. As this section is adjacent to the Blackwood River and is partially within an Aboriginal Heritage site, it is not expected that a road link will be constructed using this section of the road reserve. However it is an appropriate access for a path way link to the site. This road connection is not proposed to be included in the development planning and only a road reserve access to the lot development boundary will be included.

5.2 Stormwater Management

Refer Sections, 3.7, 3.9 and 5.3 of the LWMS. To achieve the requirements of the LWMS piped drainage, roadside swales and storage basins will need to be constructed, sized to convey and store the 20% AEP storm event. In larger storm events stormwater will flow overland, unattenuated into the Blackwood River or existing Boyup Brook-Arthur Road drainage system.

5.3 Underground Power

It is proposed that all lots within this development will be serviced by underground power as required by the WAPC.

The Western Power Network Capacity Mapping Tool indicates the area has 10-15MVA forecast remaining capacity. Based on an R5 density with a power demand of 4.7kVa per dwelling the estimated total power requirement for residential development of the Site is approximately 4.7MVa, well within the available remaining capacity.

Western Power mapping of their existing underground and overhead electrical assets within the vicinity of the subject land is presented in Figure 3. Existing 3-phase overhead power lines traverse the Site (solid blue in Figure 3), as part of subdivision these will need to be relocated and undergrounded within road reserves being created.

It is anticipated initial lots can be connected onto the existing network running through the Site. As development progresses it is expected offsite upgrades of the existing power networks will be required. The nearest transmission power line is approximately 2.4km west of the Site, the 132kV powerline shown in red in Figure 3.

Figure 3: Existing Power Network (Western Power Network Capacity Mapping Tool, March 2022)

The WAPC may consider alternative power supply based upon the advice of the relevant licensed service provider.

While matters within this space are evolving quickly, the option outlined hereunder, while generally applying to larger lots, may be relevant.

An alternate option would the provision of a renewable energy source, under State Planning Policy 2.5 – Rural Planning Guidelines the WAPC permit a renewable energy source to power residential property:

"5.4 Renewable energy sources

The use of renewable energy sources to power residential properties has become increasingly attractive to homeowners in rural areas due to the expense and challenges of connecting to a reticulated supply. SPP 2.5 allows for the use of renewable energy sources where a network connection is not available or an infrastructure upgrade is not commensurate with the scale of a proposal.

An 'off-grid' system, also known as a 'stand-alone power' system, could be utilised to service rural lots. The main components of a stand-alone power system are:

- Renewable energy generation equipment, such as photovoltaic modules (solar panels), wind turbines, or 'hybrid' combinations of these;
- control and regulation equipment for battery charging and back-up power operation;
- energy storage such as batteries;
- inverters which convert electrical current so that common household appliances can be used; and
- a back-up electricity supply from either storage batteries and/or generators.

Any stand-alone power supply system must demonstrate that the energy generated through the renewable energy source/s is sufficient for the intended land use. The use of diesel generators to power residential properties is not considered a renewable energy source as defined in SPP 2.5." (SPP 2.5 Rural Planning Guidelines Version 3 December 2016 Western Australian Planning Commission)

5.4 Water Supply

The existing Water Corporation water reticulation network is presented in Figure 4 below, there is reticulated water within the Boyup Brook townsite itself only. Water Corporation were contacted in October 2021 and in January 2022 to confirm the water supply available for the proposed subdivision and they advised that a water supply to the Site is not available. The current Boyup Brook townsite demand is at 95% capacity with the Water Corporation forecasting demand to reach the maximum capacity in the next 8 years. Water Corporation are developing new water sources however these are a few years away and do not have a schedule attached yet. The Water Corporation will need to undertake a planning review to determine the requirements to provide a water supply to the Site.

The Shire of Boyup Brook were also contacted and they advised that the Water Corporation have simply looked at past population levels and have not considered or planned for growth in Boyup Brook. The Shire seeks for Water Corporation to plan for growth and increased water provision infrastructure/solutions which may include Water Corporation funding new pump stations from Hester Dam and increased storage in Boyup Brook. To this end the Shire recommends a meeting, in the short term, between Water Corporation (possibly South West Manager), the Shire and the Developer.

The Developer is supportive of providing reticulated water to the property including a pump station, a high level tank and a low level tank. This is subject to Water Corporation ensuring there is sufficient water to service Boyup Brook and that the Developer's upgrade costs are proportionate/reasonable.

Figure 6 show elevated points on the Site.

Subject to the timing for Water Corporation to upgrade the water supply and storage to Boyup Brook, the Shire is supportive, in-principle, of a 'hybrid' servicing model where lots are initially provided with rainwater tanks and reticulated water services are laid for future connection. The tank size to accommodate allowance for fire protection and climate change. As discussed, this could see tank sizes of 120,000 litres for usual use and 15,000 litres reserved for firefighting. This proposal would increase the cost of development to the lot purchaser and such consequences must be fully considered.

Lots that are 1 hectare or above are not serviced with reticulated water.

Figure 4: Existing Water Reticulation (Esinet March 2022)

5.5 Sewerage Effluent

The Site is not within a current or proposed wastewater catchment. It is proposed wastewater is managed at individual 'lot scale' level using either Leach Drains or Aerobic Treatment Units (depending on the geology of the lot), without reticulated sewer. On-site effluent disposal is discussed in more detail in Section 4 of the LWMS.

5.6 Communications

The Boyup Brook townsite and nearby surrounds are served with Fixed Wireless NBN communications. Further afield Fixed Wireless is unavailable and NBN communications are provided by Satellite.

The NBN mapping is presented in Figure 5 below. Most of the Site falls within the NBN Fixed Wireless area, apart from the north-eastern corner of the Site (which falls within the Satellite area). Since the Site is served with wireless communications underground communications ducts (pit and pipe) are not required to be installed.

Figure 5: NBN Communications (NBN Co March 2022)

5.7 Gas

There is no existing underground gas supply in the Boyup Brook townsite or surrounds (including the subject Site), therefore it is not proposed to service the development with a reticulated gas supply. The provision of reticulated gas to the new development will not be a WAPC condition of subdivision.

1 INTRODUCTION

1.1 BACKGROUND

This Transport Impact Assessment (TIA) has been prepared by Donald Veal Consultants on behalf of Leafield Pty Ltd, with regard to the proposed subdivision development on Lots 51, 1007, 1118 Boyup Brook Arthur Road, Boyup Brook.

DVC understands there are two development scenarios which need assessment, with 360 lots and 111 lots, respectively. Under the WAPC guidelines, the two scenarios would typically attract different levels of analysis (a transport 'Statement' versus a transport 'Assessment'), determined by the volume of traffic generated.

1.2 SCOPE OF ASSESSMENT

This TIA has been prepared in accordance with the Western Australian Planning Commission's (WAPC's) *Transport Assessment Guidelines for Developments Volume 3 Subdivision* (2016). Its intent is to provide the approving authority with sufficient traffic information to confirm that the proponent has adequately considered the traffic aspects of the Structure Plan Amendments and that it would not have an adverse traffic impact on the surrounding area.

DONALD VEAL
2 EXISTING SITE CONDITIONS

2.1 SITE LOCATION

The greater site lies within the Shire of Boyup Brook, with the western boundary of the site around 1.5km north-east of the Boyup Brook townsite. It is bounded by Boyup Brook Arthur Road to the north, Jayes Road to the west and the Blackwood River to the southeast. Boyup Brook North Road intersects with Boyup Brook Arthur Road and Jayes Road to the northwest of the site.

The site is mostly bounded by agricultural land uses, mainly grazing.

Figure 2.1 shows an aerial view of the subject site and its location in a local context.

Figure 2.1: Existing Location in a Local Context

Source: MetroMap

2.2 CURRENT LAND USES

The site is currently used for agricultural purposes, mainly grazing.

2.3 ROAD HIERARCHY CLASSIFICATION

Boyup Brook Arthur Road and Jayes Road are classified as Regional Distributor Roads and Boyup Brook North Road is classified as a Local Distributor under Main Roads Western Australia's (MRWA's) Functional Road Hierarchy. Accordingly they are Shire-managed roads. See **Figure 2.2**.

Client: Leafield Pty Ltd Project: Lots 51, 1007 and 1118 Boyup Brook Arthur Road, Boyup Brook – Transport Impact Assessment

Figure 2.2: Road Hierarchy of surrounding road network Source: MRWA Crash Map

Boyup Brook Arthur Road has a posted speed limit of 100km/h. Jayes Road generally has a posted speed limit of 80km/h, which reduces to 60km/h at the intersection of Jayes Road and Ritson Street and to the south. It then decreases to 50km/h through the Boyup Brook townsite.

Boyup Brook North Road has a rural, open area default speed limit of 110 km/h according to the MRWA Speed Limits Map. See **Figure 2.3**.

Figure 2.3: Speed Limit of surrounding road network

Source: MRWA Crash Map

2.4 TRAFFIC VOLUMES

No existing traffic counts were available from the MRWA Traffic Map on the Boyup Brook Arthur Road. Nearby traffic counts from the MRWA Traffic map are shown in **Table 2.1**. From discussions with the Shire it is evident that the Boyup Brook Arthur Road does not carry as much traffic as either the Donnybrook Road or the Bridgetown Road. Site observations also confirmed that traffic volumes were low. Therefore for the purposes of this assessment it has been assumed that the Boyup Brook Arthur Road carries similar levels of traffic to the Boyup Brook Kojonup Road i.e. about 550vpd. Hourly volumes here are not the same as metropolitan areas where there are pronounced, directional AM and PM peak hours. On the Boyup Brook-Kojonup Road traffic volumes in each direction are similar and maintain a steady volume between 8:00AM and 4:00PM. Each direction carries around 20-25vph in 2021/2022. Calculations in this assessment assume current hourly volumes of 30vph in each direction.

Location	Date	Vehicles	% Heavy
		Per Day	Vehicles
Boyup Brook Kojonup Road	2021/22	543	21.4%
Donnybrook Boyup Brook Road	2021/22	787	32.8%
Bridgetown Boyup Brook Road	2021/22	693	10.7%

Table 2.1: Summary of MRWA Traffic Counts

2.5 PLANNED CHANGES TO THE ADJACENT ROAD NETWORK

DVC is not aware of any planned upgrades to the adjacent road network.

2.6 CRASH HISTORY

The MRWA CARS database was interrogated to identify the history of crashes occurring along Boyup Brook Arthur Road and Jayes Road between Ritson Street and Thompson Road in the latest 5-year reporting period, 2017 – 2021.

The database returned records of 2 crashes within this period as shown in **Figure 2.4**. Of these, one involved hitting an object and one a non-collision crash. Both crashes were property damage only.

Figure 2.4: Crash Diagram

Source: MRWA Crash Map

3 PROPOSED DEVELOPMENT

3.1 PROPOSED LAND USES

The subdivision plan proposes two differents scenarios:

- 1. Scenario 1: 360 residential lots with the subdivision connected to scheme water as shown in Figure 3.1.
- 2. Scenario 2: 111 residential lots yield in the draft Local Planning Stategy with no scheme water. At this stage there is no planned lot layout although DVC understands that access onto Jayes Road and the Boyup Brook Arthur Road will be the same as shown for Scenario 1.

 Figure 3.1: Site Concept Plan Scenario 1
 Source: Edge Planning & Property

3.2 INTERNAL ROAD NETWORK

3.2.1 Scenario 1: 360 Lots

The layout out of the roads shows good internal circulation. Based on the local catchment of each internal road and published trip generation rates (Guide to Traffic Generating Developments, October 2002, Roads and Traffic Authority) most of the internal roads will attract less than 1,000 vpd. The exception to this is Road 1 as shown in **Figure 3.1**. Given that the majority of traffic from the subdivision is expected to travel either to Boyup Brook or further afield via Boyup Brook, it can be expected that Road 1 would carry between 1,000 vpd at the eastern end and around 3,600 vpd at the western end. This is based on a trip rate of 10 trips per dwelling per day which is often applied to metropolitan subdivisions. It could be argued that in a rural setting like Boyup Brook trip generation may not be this high given the relative lack of local destinations and attractions. A trip rate of 10 is therefore considered to be a conservative (high) estimate for trip making for this proposal.

Liveable Neighbourhoods Guidelines (January 2009) Table 4 recommends that internal roads carrying up to 1,000 vpd with a low parking demand should be classified as Access Streets D with a 14.2 m road reserve, a 5.5 m-6 m paved carriageway and a 50 km/h speed limit. Streets carrying up to 3,000 vpd may be classified as Access Streets C with a road reserve of up to 16 m, a 7.2 m carriageway and a 50 km/h speed limit. Streets carrying more than 3,000 vpd should be classified as Neighbourhood Connector roads with up to a 24 m road reserve.

A school bus route currently services the rural areas to the east of the site and it is possible that this route will detour through the subdivision. A sensible internal route would follow (from the east at Road 3) the internal loop comprised of Road 3 and Road 2, before exiting the area to the west at Road 1. If this is used as a bus route then it should have an Access Road C classification despite the traffic volumes not requiring this.

Based on the forecast traffic volumes and potential bus route, DVC recommends the following classifications:

Road 1 (Jayes Road to Road 2 west intersection) – Neighbourhood Connector B (20m road reserve if on-street parking lanes are required, otherwise 18m).

Road 1 (Road 2 west to Road 2 east) – Access Street C (16m road reserve)

Road 2 (if used as a bus route) – Access Street C (16m road reserve)

Others – Access Street D (15m road reserve).

Figures 3.2 to 3.4 provide concept cross sections for each road type.

Figure 3.2: Neighbourhood Connector Cross Section

Figure 3.3: Access Street C Cross Section

The proposed subdivision layouts present some long straight sections of internal streets on which speed limits of 50 km/h may easily be exceeded. Liveable Neighbourhoods Table 6 indicates that sections of up to 200 m of Access Streets C&D may not require speed constraint measures if the traffic volumes are low and if on-street parking is likely to be generated. DVC considers that while forecast volumes are likely to be low, there is unlikely to be much on-street parking as the lots will mostly accommodate parking on site. Despite this, it may be acceptable to the Shire not to insist on speed constraint measures.

The four-way intersections between Road1/Road2 and Road2/Road4 will require traffic control, probably small roundabouts. These will reduce speeds to some extent along these roads. In any event additional measures can be introduced at the detailed design stage, if required.

3.2.2 Scenario 2: 111 Lots

Scenario 2 will generate significantly less traffic than Scenario 1 and it is unlikely that any internal road would carry more than 1,000vpd. That being the case all internal roads could have an Access Road D classification with a cross section as shown in **Figure 3.4**.

3.3 ACCESS ARRANGEMENTS

As shown in **Figure 3.1**, the site plan proposes three access roads: Road 1 at Jayes Road and Road 2 and Road 3 along the Boyup Brook Arthur Road.

Intersection sight distances were measured along the major road at each location and are summarised in **Table 3.1.**

Access Road	Sight Distance	Sight Distance	Comments
	Left (m)	Right (m)	
Road 1	350m	> 200m	SD is an estimate of the achievable SD
			once modest vegetation in the verge has
			been removed. (See discussion later in
			this section)
Road 2	>400m	>350m	Excellent SD both directions
Road 3	>350m	Approx 200m	SD in both directions is an estimate of
			achieveable SD once vegetation in the
			verge has been removed. The road crests
			and curves to the right, limiting this sight
			distance.

Table 3.1: Summary of Sight Distances

Photos 1-6 illustrate the views from the access road locations and the vegetation currently growing in the verge.

Client: Leafield Pty Ltd Project: Lots 51, 1007 and 1118 Boyup Brook Arthur Road, Boyup Brook – Transport Impact Assessment

Photo 5: Road 3 View Looking East

Photo 6: Road 3 View Looking West

Equation 2 in the Austroads Guide to Road Design Part 4A: Unsignalised and Signalised Intersections provides guidance on calculating the Safe Intersection Sight Distance (SISD) at intersections. SISD is the minimum sight distance which should be provided on the major road at any intersection. Given the high percentage of trucks using the nearby roads (see **Table 2.1** above) the required SISD has been checked for trucks in the 100km/h and 80km/h speed limit area as follows:

Posted Speed Limit	SISD for Trucks *	SISD for Cars**
80km/h	245m	214m
100km/h	330m	285m

* Equation 2 from Austroads Part 4A

** MRWA Supplement to Austroads Part 4A

(* – this assumes that the Design Speed is 10km/h higher than the posted speed limit (as required by MRWA), the coefficient of deceleration for trucks is 0.29, there is a downhill grade of 2% and the Decision Time is 5seconds).

Road 3 does not maintain a SISD of 330m to the right for trucks or 285m for cars. This being the case it may be possible to relocate the Road 3 intersection further to the west and to recommend a reduction of the speed limit along that section of road. The latter would appear to be sensible given that there will be a residential frontage along the road on the south side i.e. this will become a built-up environment and 80km/h speed limits would be expected by road users. While Road 3 is not expected to carry significant traffic it may provide a bushfire plan alternative exit and should therefore be retained.

Road 1 generally has good sight distance to the right but on-site measurement past the 200m mark is made difficult by the vegetation. This road will be in a cutting when constructed and through modest reshaping of the cut to the right and cleared verges, DVC considers that the required sight distances will be achieved for the current 80km/h speed limit. There is also scope to review the speed limit on Jayes Road between Boyup Brook North Road and south of the Road 1 intersection. In addition, the land falls away from the Boyup Brook-Arthur Road on the eastern side, further reducing visual obstruction there. In any event this should be checked during detailed design.

4 ANALYSIS OF EXTERNAL ROAD NETWORK

This transport assessment has been undertaken assuming the full development of Scenario 1. When full development will occur is dependent on a range of factors affecting demand, including economic activity in the area. If a forecast uptake of about 50 properties per year is achieved, full development would be achieved in about 8 years. Based on this, it has been assumed that for the purposes of this traffic assessment that full development will occur in 2030.

4.1 TRIP GENERATION RATES

4.1.1 Scenario 1: 360 Lots Trip Generation

Peak hour trip generation for the proposed development has been based on the Residential Rates in Table 2 of Western Australia Planning Commission (WAPC) *Transport Assessment Guidelines for Developments (2016) Volume 3.*

The residential lots are estimated to generate about 290 trips during the peak hour as shown in **Table 4.1**.

		Rates					Tri	ps	
Site	Dwellings	AM	AM	PM	PM	AM	AM	PM	PM
		In	Out	In	Out	In	Out	In	Out
Scenario 1	360	0.2	0.6	0.5	0.3	72	216	180	108
						2	288	28	88

 Table 4.1: Trip Generation of Proposed Developments – Scenario 1

The Roads and Traffic Authority's (RTA) Guide to Traffic Generating Developments suggests a daily trip rate of 9-10 trips per dwelling. This translates to about 3,240-3,600 trips per day to the subject site split 50/50 inbound and outbound trips.

4.1.2 Scenario 2: 111 Lots Trip Generation

Trip generation rates applied to Scenario 2 are shown in **Table 4.2** and indicate that peak hour trips will reach about 90vph. Daily trips would be between 1,000 - 1,200.

 Table 4.2: Trip Generation of Proposed Developments – Scenario 2

		Rates					Tri	ps	
Site	Dwellings	AM In	AM Out	PM In	PM Out	AM In	AM Out	PM In	PM Out
Scenario 2	111	0.2	0.6	0.5	0.3	22	67	56	33
						89	1		39

4.2 TRIP DISTRIBUTION & ASSIGNMENT

Based on discussions with engineering staff at the Shire, it has been assumed that 90% of traffic from the proposed development will have destinations in Boyup Brook itself, or will travel via the township to destinations further afield such as Bridgetown, Kojonup or Collie. The remaining 10% of development traffic is assumed to travel east towards Dinninup (5%) or north on the Boyup Brook Road North (5%). Based on these traffic distributions it has been assumed access Road 1 will carry 90% of the traffic with access Roads 2 and 3 each carrying 5% of the traffic demand. This is shown graphically in **Figures 4.1** and **4.2** for the AM and PM Peak hours respectively.

Figure 4.1: AM Peak Hour Trip Distribution

Figure 4.2: PM peak Hour Trip Distribution

4.3 ROAD AND INTERSECTION CAPACITIES

Boyup Brook Arthur Road is classified as a Regional Distributor Road and operates at a 100 km/h speed limit adjacent to the sites. The road is presently a two-lane undivided facility and is assumed to carry around 550vpd on weekdays (see Section 2.4 - Traffic Volumes).

The expected increase in traffic from the development is of the order of 288vph, most of which would travel towards Boyup Brook. This increase can be readily accommodated within the practical capacity of Jayes Road in this vicinity.

A SIDRA intersection analysis was undertaken on the Jayes Road/Road 1 intersection. SIDRA is an intersection-modelling tool commonly used by traffic engineers for all types of intersection analysis. It has been used here to determine the existing and future operating characteristics of the intersection.

SIDRA outputs are presented in the form of Degree of Saturation, Level of Service, Average Delay and 95% Queue. These characteristics are defined as follows:

Degree of Saturation: is the ratio of the arrival traffic flow to the capacity of the approach during the same period. The Degree of Saturation ranges from close to zero for varied traffic flow up to one for saturated flow or capacity.

Level of Service (LOS): is the qualitative measure describing operational conditions within a traffic stream and the perception by motorists and/or passengers. In general, there are 6 levels of service, designated from A to F, with Level of Service A representing the best operating condition (i.e. free flow) and Level of Service F the worst (i.e. forced or breakdown flow).

Average Delay: is the average of all travel time delays for vehicles passing through the intersection.

95% Queue: is the queue length below which 95% of all observed queue lengths fall.

Given the low background traffic volumes on Jayes Road (30vph in each direction during the peak hour), the intersection of Jayes Road and Road 1 will not experience any significant congestion. This intersection will operate at a Level of Service A based on a single lane approach in each direction at opening (when all 360 lots are developed). Even if the background traffic increases by a compound growth rate of 2% for 20 years the intersection is unlikely to experience any significant congestion. The other 2 access road intersections will also not experience any significant congestion.

4.4 TURNING LANE WARRANTS

While the SIDRA modelling has demonstrated the intersections will not experience any significant congestion, warrants for improvements are tested to ensure the safe operation of intersections. In some cases, such improvements may potentially be warranted on the basis of intersection operating speed and the opposing turning movments.

DVC has assessed the need for improvements to the intersection (Road1 Access) based on MRWA's *Supplement to Austroads Guide to Road Design (AGRD) Part 4*. The following assumptions have been made for this assessment:

- Existing traffic volumes on Boyup Brook Arthur Road 30vph in each direction (based on Boyup Brook Kojonup Road traffic).
- Heavy vehicle traffic- 25% on the main road (based on Boyup Brook Kojonup Road) and 5% on the subdivision roads.

- Opening year 2030 the year in which all subdivision lots are occupied.
- Background traffic growth rate scenario tested 3% compound per annum.
- Design speed 10km/h higher than the posted speed limit.

4.4.1 Scenario 1: 360 Lots

The analysis shows that based on a 3% compound growth rate for the background traffic, an Auxiliary Right Turn lane would be required at the intersection of Access Road 1 and Jayes Road in about 18 years time (say 2039). See Appendix A. No auxiliary lanes would be required at the other access road intersections during this time.

DVC considers it unlikely that a sustained compound growth rate of 3% would be achieved unless fresh industry (e.g. mining, tourism etc) were to be introduced which directly affected traffic in the area. On the South Western Highway just north of Greenbushes for example, the MRWA Traffic Map shows that traffic volumes have remained reasonable steady from 2017 to 2022 (see **Figure 4.3**). In any event it would seem unlikely that any auxiliary lane is required in the near future. This delay provides an opportunity to monitor traffic volumes and growth rates on Jayes Road and, in the event that high future traffic growth is achieved in the area, introduce additional lanes if and when warranted.

Figure 4.3: Traffic Volumes on South Western Highway (Source: MRWA Traffic Map)

4.4.2 Scenario 2: 111 Lots

No auxiliary traffic lanes are required in the foreseeable future at any of the access road intersections under this scenario.

4.5 ROAD SAFETY

The crash record for the surrounding road network does not point to any particular road safety issues.

5 SUSTAINABLE TRANSPORT

5.1 **BUS ROUTES**

Scheduled commuter bus services in regional towns are rare and it is unlikely that such a service will be introduced in Boyup Brook, even in the medium-term future. There may be bespoke services to cater for tourists, aged or diabled persons for example, but these will have little impact on peak hour traffic conditions.

The Shire has advised of a school bus service which uses Boyup Brook Arthur Road and supports the Boyup Brook District High School. This route could easily be adapted to service the proposed subdivision.

5.2 PEDESTRIAN AND CYCLE ACCESS FACILITIES

Liveable Neighbourhoods indicates that footpaths should be provided on at least one side of all Access Streets. However, we have observed that in rural settings such as these where pedestrian usage and destinations may be limited, footpaths are not always provided. The low traffic volumes forecast here generally point to shared on-street pedestrian, cycle and vehicle movements. It may therefore be acceptable to the Shire to only negotiate specific locations within the site where a footpath is required, for example adjoining Road 1 west of Road 2, or adjacent to public open space.

Boyup Brook is included in the Warren-Blackwood 2050 Cycling Strategy which proposes a cycle route along the railway line from Jayes Road to the Flaxmill Caravan Park, and two tourist routes along the Katanning Railway alignment to Donnybrook and along the Blackwood River valley to Bridgetown. There are also local routes proposed connecting residential areas in the townsite itself.

The gradient along Jayes Road from the townsite to the Access Road 1 doesn't favour cyclists. Therefore the Katanning Railway route would appear to offer the best opportunity for cyclists from the proposed subdivision. This is supported by the proposed walk/cycle track connections shown in **Figure 3.1**. The river route which meets the Katanning railway reserve at Skeleton Bridge, would provide good access to the lower (southern) side of the town and the High School. As it constitutes part of the 2050 Cycling Strategy, some limited funding may be available from the State Government to assist its implementation. The route shown via Ritson Street may also be suitable as it avoids the long hill up Jayes Road and enters the town from the northern side. While there are no Shire plans to extend Ritson Street past its current construction (to the south-west corner of Lot 46 (No107) Ritson Street) the road reserve does extend east to connect with the Blackwood River foreshore. Accordingly, subject to Shire requirements, there is scope to additionally create a walk/cycle connection between the site and Boyup Brook via Ritson Street.

SUMMARY AND RECOMMENDATIONS 6

6.1 **SUMMARY**

This Transport Impact Assessment (TIA) has been prepared by Donald Veal Consultants on behalf of Leafield Pty Ltd, with regard to the proposed subdivision development on Lots 51, 1007, 1118 Boyup Brook Arthur Road, Boyup Brook. Two development scenarios are covered in this assessment: 360 lots with scheme water and 111 without scheme water.

The site lies within the Shire of Boyup Brook, with the western boundary of the site around 1.5km northeast of the Boyup Brook townsite. It is bounded by Boyup Brook Arthur Road to the north, Jayes Road to the west and the Blackwood River to the southeast. Boyup Brook North Road intersects with Boyup Brook Arthur Road and Jayes Road to the northwest of the site.

Boyup Brook Arthur Road and Jayes Road are classified as a Regional Distributor Road and Boyup Brook North Road is classified as a Local Distributor under Main Roads Western Australia's (MRWA's) Functional Road Hierarchy. Boyup Brook Arthur Road has a posted speed limit of 100km/h. Jayes Road generally has a posted speed limit of 80km/h, which reduces to 60km/h at the intersection of Jayes Road and Ritson Street and to the south. It then decreases to 50km/h through the Boyup Brook townsite.

Boyup Brook North Road has a rural, open area default speed limit of 110 km/h.

No existing traffic counts were available from the MRWA Traffic Map on the Boyup Brook Arthur Road. Discussions with the Shire indicate that the Boyup Brook Arthur Road does not carry as much traffic as either the Donnybrook Road or the Bridgetown Road. Therefore for the purposes of this assessment, it has been assumed that the Boyup Brook Arthur Road carries similar levels of traffic to the Boyup Brook-Kojonup Road i.e. about 550vpd.

The MRWA CARS database was interrogated to identify the history of crashes occurring along Boyup Brook Arthur Road and Jayes Road between Ritson Street and Thompson Road in the latest 5-year reporting period, 2017 - 2021. The database returned records of only 2 crashes within this period. One involved hitting an object and one a non-collision crash. Both crashes were property damage only.

The proposed Scenario 1 Subdivision Plan comprises 360 lots. An access is proposed onto Jayes Road just south of the Boyup Road North intersection. Two accesses are proposed onto the Boyup Brook Arthur Road east of this intersection. For Scenario 2 (111 lots) no subdivision plan is available but it is understood that access is likely to be at the same locations as proposed for Scenario 1.

Under Scenario 1 the internal roads will typically carry low volumes of traffic and should be classified as Access Streets C and D as defined by the WAPC Liveable Neighbourhoods Guidelines. Road 1 access onto Jayes Road will carry slightly higher volumes and towards the western end attracts a Neighbourhood Connector classification. Under Scenario 1 all roads should attract an Access Street D classification.

Sight distances at the proposed accesses onto the Boyup Brook Arthur Road have been examined. The easternmost access does not maintain a satisfactory sight distance for the 100km/h speed limit there. It should be possible to move this intersection further to the west and reduce the speed limit in this area.

Road 1 generally has good sight distance to the right but on-site measurement past the 200m mark is made difficult by the vegetation. This road will be in a cutting when constructed and through modest reshaping of the cut to the right, DVC considers that the required sight distances will be achieved. In any event this should be checked during detailed design.

Peak hour trip generation for the proposed development has been based on WAPC guidelines for residential development. Scenario 1 is expected to generate about 288 trips during the peak hour (inbound and outbound) or conservatively about 3200-3600 trips per day.

A SIDRA analysis was undertaken for the opening year (assumed to be 2030) and the opening +10 years (2040) to demonstrate the impact of traffic growth at the intersection Access Road 1 and Jayes Road for Scenario 1.). Even if the background traffic increases by a compound growth rate of 2% for 20 years the intersection is unlikely to experience any significant congestion. The other 2 access road intersections will also not experience any significant congestion.

Turning lane warrants were examined for this intersection using MRWA's *Supplement to Austroads Guide to Road Design (AGRD) Part 4*. The analysis shows that based on a 3% compound growth rate for the background traffic, an Auxiliary Right Turn lane would be required at the intersection of Access Road 1 and Jayes in about 18 years time (say 2039). No auxiliary lanes would be required at the other access road intersections during this time. DVC considers that a compound growth of 3% per year is optimistic. While some growth at this rate may be achieved it is unlikely that sustained, compound traffic growth will be achieved over 20 years. DVC therefore considers that auxiliary lanes are not warranted.

Scheduled commuter bus services in regional towns are very rare and unlikely to be introduced here. The Shire has advised of a school bus service which uses Boyup Brook Arthur Road and supports the Boyup Brook District High School. This route could easily be adapted to service the proposed subdivision.

Boyup Brook is included in the Warren-Blackwood 2050 Cycling Strategy which proposes a cycle route along the railway line from Jayes Road to the Flaxmill Caravan Park, and two tourist routes along the Katanning railway line alignment to Donnybrook and along the Blackwood River valley to Bridgetown. There are also local routes proposed connecting residential areas in the townsite itself. There may be merit in investigating state funding for the early implementation of the Blackwood River link to support pedestrian and cycle traffic from the subdivision into Boyup Brook.

The crash record for the surrounding road network does not point to any particular road safety issues.

6.2 **RECOMMENDATIONS**

DVC recommends that the location of the Access Road 3 intersection with the Boyup Brook Arthur Road be moved further west in conjunction with a reduction of the speed limit to 80km/h to provide adequate sight distance.

Based on the above assessment we recommend approval of the proposed subdivision scenarios from a traffic, transport and road safety perspective.

APPENDIX A: INTERSECTION WARRANTS

Opening Year PM Peak - 3 % growth rate

Opening + 10 Years PM Peak - 3 % growth rate

Dear Mr Dale Putland

January 16, 2023

I am writing to you on behalf of the Boyup Brook Community Mental Health Action Team (CoMHAT) Inc to request a variation to the site location of the proposed Youth Zone Donga as per the diagram and photo attached.

We would also like to request to run and power and water for the dongar and connect grey water to septics at existing services at the toilet block below.

Sincerely,

Renee Knapp

Chairperson, Boyup Brook CoMHAT

"Traffic Lights" Colour Coding:

For the purposes of identifying "material variances" under Local Government (Financial Management) Regulation 34, the Council has defined a formula in Council Policy 2.1.6 (see also Variance Report in these Statements).

To simplify this reporting, a traffic light system is used in the variance column of the Statement of Comprehensive Income and the Rate Setting Statement, as follows:

Revenue:

Green = Actual Revenue is greater than Year-to-Date budgeted revenue by 10% or more

Red = Variance between Actual Revenue and Year-to-Date budget is greater than 10% (lower) **Expenditure:**

Green = Actual Expenditure is less than Year-to-Date budgeted expenditure Red = Variance between Actual Expenditure and Year-to-Date budget is greater than 10% (higher)
